**BOUNTY HUNTER®**  
METAL DETECTORS

## Bounty Hunter® Junior

- Professional metal detecting features for a junior size detectorist
- Extends to 2 1/4'
- Discrimination control will eliminate iron and most unwanted items
- Speaker sound increases as target gets closer
- Lightweight, ergonomic design for easy handling and comfortable use

## The VLF Metal Detector

- Automatic tuning and ground balance
- Power and sensitivity control
- Trash eliminator control to remove most undesirable items from detection
- Motion-all-metal mode for detecting all types of metal

## Gold Digger

- Automatic tuning and ground balance
- Power and sensitivity control
- Trash eliminator control to remove most undesirable items from detection
- Earphone included with 1/8" jack

## Tracker II

- Automatic and manual ground balance for all ground conditions
- Easy to understand operation gets you started right away
- 2-Tone audio feedback so you can discover valuables and discard unwanted items
- Headphone jack with 1/4" plug can be used with most headphones

## Fast Tracker

- Automatic ground balancing to help "see through" ground minerals
- Easy to understand operation gets you started right away
- 2-Tone audio feedback so you can discover valuables and discard unwanted items
- Headphone jack with 1/4" plug can be used with most headphones

## Tracker IV

- Excellent ground balancing properties for the best results in all kinds of soil
- Sensitivity meter helps to determine signal strength
- User controlled sensitivity and discrimination knobs for varying conditions
- Headphone jack with 1/4" plug can be used with most headphones

## Quick Silver

- Fully automatic ground balance with Squelch-Tech® eliminates false signals
- Push-button discrimination and one-touch depth control makes it easier to use
- Four segment digital target identification and 3-tone audio feedback for accurate identification of buried objects
- Easy view LCD display is readable at varying distances

## Lone Star

- Touch pad selection along with variable discrimination controls
- Five segment digital target identification and three tone audio feedback
- Auto-notch for automatic elimination of undesirable objects
- Three operating modes for flexibility in different types of hunting

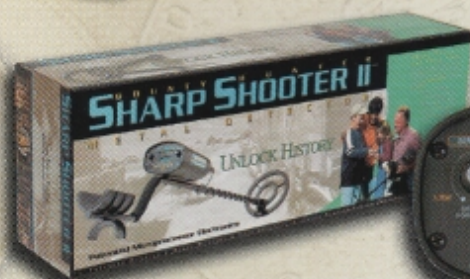

## Quick Draw II

- Digital coin depth indicator tells you how deep to dig
- Your choice of Variable Notch and Auto Notch Modes
- Three level iron discrimination for relic hunting
- Nine segment digital target identification and three tone audio feedback

# Serious Detectors

6

## Sharp Shooter II

- Includes a no-motion all metal mode for accurate pinpointing
- Touch pad selection with variable discrimination controls
- Nine-segment visual target identification and 3 tone audio feedback
- Four operating modes

## Land Star

- Choose between automatic Ground-Trac® or variable ground balancing
- Four level iron discrimination maximizes relic hunting
- Digital coin depth indicator tells you how deep to dig
- Nine segment visual identification and 3 tone audio feedback

## Camo-LS

- Land Star features in a stylish SuperFlauge® camouflage pattern
- Choose between automatic Ground-Trac® or variable ground balancing
- Four level iron discrimination maximizes relic hunting
- Digital coin depth indicator tells you how deep to dig

## Land Ranger

- Three-digit numeric target identification for most accuracy
- Ground-Trac® with ground monitor ensures efficient operation
- Easy to read full sized LCD display shows detecting status
- User-controlled programmable operation for maximum flexibility

## Time Ranger

- Fully programmable operation for maximum flexibility
- Blanker feature eliminates unwanted targets with push of a button
- Sniff feature "clones" targets for precise hunting
- Ground-Trac® with ground monitor ensures efficient operation

## Bounty Hunter® 10-Inch Magnum Coil

The Bounty Hunter® 10-Inch Magnum Coil has a wide field of detection saving time by pinpointing more objects more precisely. Deeper detection covers a greater area quicker than a standard 8-inch coil. Super sensitive for maximum coverage. Coil cover available.

## Bounty Hunter® 4-inch Gold Nugget Coil

While a standard coil is great for finding large objects that are deeply buried, the 4-inch coil has a narrower field of detection - enabling your detector to separate objects more efficiently. The 4-inch coil's shallower detection area makes it ideal for prospecting in difficult, high metal areas since it allows you to more easily discriminate valuable objects from refuse. In addition to allowing the precise pinpointing of objects, a smaller coil lets you probe tight spots such as corners and crevices.

## Bounty Hunter® Padded Carrying Bag

Protects your Bounty Hunter® metal detector from the elements, while in storage, and in transit. Made of rugged double-stitched nylon construction, custom tailored to accommodate the Bounty Hunter® S-rod configuration, includes handy outside zip-pocket for extra batteries or small accessories, and the bright Bounty Hunter® logo emblazoned on the side. A must-have item for the active detectorist.

## Bounty Hunter® Stereo Headphone

Designed for use with Bounty Hunter metal detectors. The adjustable headphone is small, light weight with true stereo sound. Soft leather earpiece pads surround the ears for a comfortable fit. The extra long 8' cable with volume control provides for easy access and mobility. The headphones feature a 1/3" mini plug along with 1/4" adapter for compatibility with most audio electronics.

## Bounty Hunter® "Finds" Pouch & Digging Trowel

A Bounty Hunter® finds pouch and digger will help you to retrieve and secure your newly found treasure. The stainless steel 9" heavy-duty digging tool has a comfortable plastic handle and a handy depth gauge. Your finds can then be easily kept in the tough nylon pouch with a 2" adjustable web belt that contains two large pockets and two side slip-in pockets.

## Bounty Hunter® Coil Covers

Protect coils from abrasion and damage. Coil covers are available in the most popular sizes.

**4" Closed** - Auxiliary Gold Nugget Coil (included with the Land Ranger and Time Ranger)

**7" Closed** - Tracker I, Fast Tracker

**7 3/4" Closed** - VLF, Gold Digger, Tracker II, Prospector, Surveyor

**8" Open** - Tracker IV, Quick Silver, Lone Star, Quick Draw II, Sharp Shooter II, Land Star, Camo-LS, Land Ranger, Time Ranger.

## Bounty Hunter® Pinpointer

The Bounty Hunter™ Pinpointer pinpoints exact location of buried metal objects. The pinpointer was designed to be used with any of our metal detectors to help find treasures. It is also a handy tool for homeowners, hobbyists, and mechanics; anyone needing to find a lost metal object. Easy to use with single knob control to adjust sensitivity and features audio signal indicator and vibrator. The unit is small and light for easy handling and carrying. No assembly required, runs on 1 9-Volt Battery. 1 year warranty.

# BOUNTY HUNTER®

## METAL DETECTORS

### COMMON METAL DETECTING TERMS

Each Bounty Hunter® product is a VLF (Very Low Frequency) metal detector. VLF, also known as induction balance, is probably the most popular professional detector technology in use today.

These are some common terms used throughout this catalog that may not be familiar to the metal detecting newcomer:

#### DISCRIMINATION

When the detector emits different tones for different types of metals, and when the detector "eliminates" certain metals, we refer to this as the detector "discriminating" among different types of metals. Discrimination is a fixed-start-point elimination system.

#### RELIC

A relic is an object of interest by reason of its age or its association with the past. Many relics are made of iron, but can also be made of bronze or precious metals.

#### IRON

Iron is a common, low-grade metal that is often a undesirable target in certain metal detecting applications. Examples of undesirable iron objects are old cans, pipes, bolts, and nails.

Sometimes, the desired target is made of iron. Property markers, for instance, contain iron. Valuable relics can also be composed of iron; cannon balls, old armament, and parts of old structures and vehicles can also be composed of iron.

#### GROUND BALANCE

Ground Balancing is the ability of the detector to ignore, or "see through," the earth's naturally occurring minerals. When "ground balanced", the detector can differentiate between the metallic content of the soil, and buried metals objects. Your Bounty Hunter® has the ability to ground balance in many different types of soils, like most professional metal detectors.

#### WATERPROOF

The search coil can be submerged in water.

The control housing and cable-to-housing connection must, however, stay dry.

#### COINSHOOTING

Finding buried coins is the most popular metal detecting application.

The most valuable are very old; take care in unearthing them to avoid damage.

#### CACHE HUNTING

Pronounced "cash". A cache is a buried or hidden valuable stored inside a case, strongbox, or bag.

Please be responsible and join with Bounty Hunter® in supporting the

#### TREASURE HUNTER'S CODE OF ETHICS:

1. Respect the right and property of others.
2. Observe all laws, whether national, state or local.
3. Never destroy historical or archaeological treasures.
4. Leave the land and vegetation as it was. Fill in your holes.
5. All treasure hunters may be judged by the example you set.
6. Always obtain permission before searching any site.
7. Be extremely careful while probing, picking up or discarding trash items.
