BOUNTY HUNTER

LAND STAR™

Three-Tone Audio Discrimination. No Motion All Metals Threshold pinpointing and powerful depth capabilities make your hunting easier and more rewarding. Notch and Auto Notch eliminate pull-tabs and still detect nickels and most gold rings. *Detects Coins up to 12 Inches*

- Uses 2 9-Volt Alkaline Batteries
- Lightweight: Only 3 1/2 Lbs.
- Cleartone Speaker
- 1/4-Inch Stereo Headphone Jack
- Adjustable Aluminum Stem

BOUNTY HUNTER

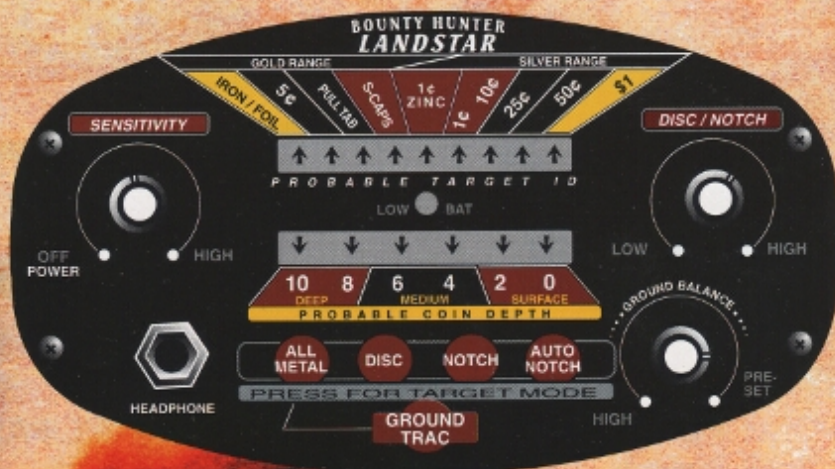

5-YEAR LIMITED WARRANTY

PRICE
\$ 349

8-INCH WATERPROOF COIL SYSTEM

The Dual LCD Readout will simultaneously "lock" onto Target ID and Depth. No switching back and forth needed. Low Battery Indicator will come on and stay on when batteries are low. DISC/NOTCH Variable Control allows for precise separation of trash from treasure.

Breaking New Ground
In Precision Engineering,
The Land Star Detector
will locate buried
objects virtually anywhere.

Find Gold, Silver,
Coins & Valuable Relics
with true accuracy.

- ★ **LCD Target Readout**
- ★ **LCD Depth Readout**
- ★ **Touchpad Selection**
- ★ **Manual Ground Balance**
- ★ **Ground Trac[®] Retune**
- ★ **Full Discrimination**
- ★ **Variable Notch**
- ★ **Auto Notch**
- ★ **Disc/Notch Level Control**

*Has Both
NO MOTION ALL METALS
and
MOTION ALL METALS
with Iron
Discrimination by Size.*

EASY TO OPERATE!

Press ALL METAL pad and all metals are detected with a medium tone. Press DISC to detect iron and desired targets with Three-Tone Audio—Low tone for small gold, iron and nickels, medium tone for pull-tabs, screw caps and zinc pennies. High tones for other coins and silver. Press NOTCH to reject iron and pull-tabs, yet detect nickels and other good targets. Press AUTO NOTCH and automatically reject most trash items while still detecting treasure items.

**S-ROD HANDLE
WITH PADDED ARM
CUP AND STAND**

**Manual Ground Balance
in the ALL METALS Mode
Adjusts Easily and Quickly
in All Soil Conditions**

LAND STAR SPECIFICATIONS

The Land Star is a powerful metal detecting system offering tremendous versatility with two distinct systems integrated into one:

1. No-Motion All Metals Mode—

In this setting, detected targets will cause the detector to sound off for as long as the target is under the searchcoil—motion is not required to detect a target. While operating in the ALL METAL Mode, the GROUND BALANCE Control ensures proper mineral elimination; the GROUND TRAC touchpad locks in the setting. All targets will be detected with a medium tone.

2. Motion Discriminate Mode, Notch and Auto Notch Modes—

These three modes fall under the Discrimination System. The unit will now emit three separate tones classifying metal under the Audio Target Identification System. The unit automatically Ground Balances and can now be adjusted by the SENSITIVITY Control for depth capability and the DISC/NOTCH Control for setting the level of rejection of various trash items. Motion is now required to make a detection—items will be tuned out if coil is not in motion.

Touchpad Operation

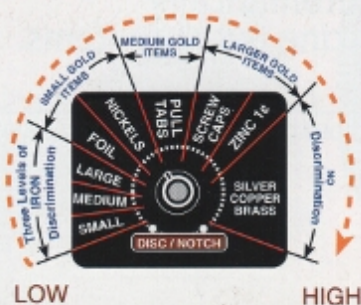

With four modes of operation and a separate Ground Trac Touchpad for Ground Balance Re-Tune, the Land Star can be effectively utilized for any metal detecting application conceivable:

- All Metal:** The All Metals Mode is an excellent mode for gold prospecting, cache hunting or pinpointing objects when coin-shooting.
- Disc:** The Disc Mode offers different levels of discrimination adjusted by the Disc/Notch Control. An excellent mode of choice when relic hunting since iron is detected at the Disc/Notch Control's lowest setting.
- Notch:** The Mode of choice when coin-shooting or ring hunting. Can selectively eliminate certain types of pull-tabs while still detecting nickels and gold rings.
- Auto Notch:** A fully automatic discrimination mode that allows the operator turn-on-and-hunt discrimination. The Disc/Notch Control can be adjusted to increase the width of the Notch making possible the rejection of screw caps and zinc pennies while still detecting copper pennies, silver coins, nickels and many gold rings.

Disc/Notch Control

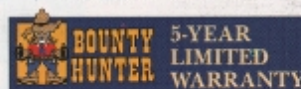

When operating in the DISC Mode, the DISCNOTCH Control will eliminate items from iron to zinc when turned in a clockwise direction.
NOTE: Adjustment changes when operating in the NOTCH or AUTO NOTCH Modes.

Weight: 3.5 lbs
Operating Frequency (kHz): 6.6
Digital LCD Readout
Low Battery Indicator (LCD)
All Metal Motion (Auto Ground)
Motion Discrimination (Auto Ground)
3-Tone Audio Discrimination
1/4" Headphone Jack
Internal Speaker System
8" Open-Face Coil System
Requires Two 9-Volt Batteries
S-Rod Handle System
Adjustable Aluminum Stem
Limited 5-Year Warranty

All Metal
Ground Trac Re-Tune

The LCD Display emits "arrow" indications for the types of metal being detected. The general categories "GOLD RANGE" and "SILVER RANGE" allows for quick reference when hunting for specific types of metal. Under these broad categories falls more common types of metal objects found when detecting. These indications may also symbolize many other types of precious metal objects such as gold rings, medallions, tokens, and relics.

Visual Target Identification

Depth Readout

The Probable Depth Indicator works simultaneous with the Target Identification—each arrow will lock on and stay on estimated depth in inches for coin-sized objects until another target's depth is detected.

Audio Target Identification

The 3-Tone Audio Discrimination categorizes metal targets under 3 audio output possibilities:

This feature in combination with the Visual Target Identification will minimize digging trash in favor of digging treasure. With an external speaker or the use of stereo headphones, the detectorist always has a solid audio reference that, along with the Visual Target Identification, ensures ease of use in finding treasure.

Special Features

8" SEARCHCOIL: The Land Star comes standard with the 8" Open-Face Coil System. A versatile and deep-seeking coil that can be used effectively for all types of detecting. This coil may be submersed in water without any affect on the operation of the detector allowing for gold prospecting and shallow water hunting.

DEPTH CAPABILITY: The Land Star was designed to integrate maximum depth capability with accurate performance. There are many factors that influence the depth of a metal detector. The most important include: ease of operation, soil conditions and type of coil. All three of these factors are mastered by the Land Star.

OPTIONAL ACCESSORY 4-INCH COIL SYSTEM: The Bounty Hunter 4-Inch Gold Nugget Coil System is fully compatible with the Land Star. It is highly sensitive and offers superior performance when hunting for small objects (such as gold nuggets or small pieces of jewelry), or in mineralized or highly trashed areas.
