

TRACKER™ III

DUAL DISCRIMINATOR

The Tracker III is a coin-shooter's and treasure hunter's dream. This metal detector is easy to operate, highly rugged, comfortable, lightweight, and extremely efficient in the field.

- FULL DISCRIMINATE
- DUAL TONE DISCRIMINATE
- SENSITIVITY ADJUSTMENT
- DISCRIMINATE ADJUSTMENT
- THREE-POSITION TOGGLE SWITCH
- ADJUSTABLE S-ROD HANDLE SYSTEM
- S-ROD STAND
- COMFORT HANDLE GRIP
- 7.25" WATERPROOF COIL SYSTEM
- METER SYSTEM
- LOW BATTERY INDICATOR
- EXTERNAL SPEAKER SYSTEM
- QUARTER-INCH HEADPHONE JACK
- INTERCHANGEABLE COIL PLUG

The DUAL DISCRIMINATOR SYSTEM with GROUND TRAC® offers options for finding more valuables and less trash. 'Tone Discrimination' gives Low Tone for nickels, tabs and most trash items, High Tone for most coins and silver. Can be adjusted so tabs give an in-between broken sound, making them easy to identify, thus allowing for finding of nickels and gold rings along with other coins. On 'Full Discrimination' the detector will reject trash and other unwanted items.

The Tracker III will ground balance automatically in all types of soil conditions. With 'All Metals' motion mode, the Tracker III has the ability to find GOLD NUGGETS IN BLACK SAND! In addition, it is capable of finding large caches and relics at amazing depths. If you want a detector that is simple to set up and ready to sniff out treasures, coins, jewelry, and interesting artifacts, buy the Tracker III today!

INFO & SPECIFICATIONS

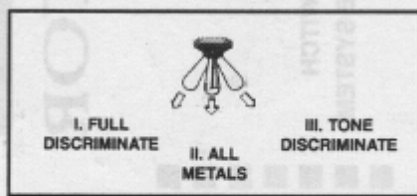

DUAL DISCRIMINATOR & MODE TOGGLE SWITCH

The Mode switch allows instant selection from 3 modes of operation: All Metal, Full Discriminate, and Tone Discriminate.

I. FULL DISCRIMINATE: Set the Mode Switch to DISC and most trash items can be rejected. Adjust the DISCRIMINATE control higher to increase the range of discrimination. Be aware that discrimination of Pull Tabs will cause nickels and some gold rings to also be rejected.

II. ALL METAL: Set the Mode Switch to the center position and the detector will detect all metals.

III. TONE DISCRIMINATE: When using the Tone Discriminator, a unique dual tone "beep" and automatic iron/foil rejection makes finding treasure easy and fun.

SPECIFICATIONS

Weight (Lbs.-Oz.): 3-0
Operating Frequency (Hz): 6.6
Searchcoil Size: 7.25"
Three-Position Toggle Switch
Low Battery Indicator Light (LED)
Analog Meter System
All Metal Motion
Motion Discrimination
2-Tone Target ID
Headphone Jack
Internal Speaker System
Waterproof Coil System
Requires Two 9-Volt Batteries
Adjustable Aluminum Stem
Limited 5-Year Warranty

Controls:

On/Off Switch
Sensitivity Control
Discrimination Control
Automatic Ground Balance
Full Discriminate
Dual-Tone Discriminate

BOUNTY HUNTER®

TONE DISCRIMINATION automatically classifies detected metal objects into these categories.

Adjust the **DISCRIMINATE** control higher to increase the range of the low tone. It is possible to set the **DISCRIMINATE** level so that nickels have a low tone, larger coins have a high tone and pull tabs have an in-between "broken" tone, making them easily recognizable.

Sensitivity will be slightly reduced when using either the **DISC** or **TONE** Discriminator. With the **Mode Switch** you can go from **DISC** or **TONE** to **ALL METAL**, and back again, without changing the **Discriminate** level.

GROUND CONTROL: The Tracker III automatic **Ground Trac** feature allows operation in virtually any mineralization of ground with full power. Use it effectively on the beach or for gold prospecting. In the **ALL METAL** Mode, the Tracker III will detect gold nuggets thru black sand! Finds relics in all types of soil, deeply and with ease.

Turn the "On-Off/Sensitivity" control to **ON**.

NOTE: The detector is normally silent when operating until the coil passes over a metallic object.

When first turned On, Sensitivity will be at its lower setting. Turning the control toward "HIGH" increases sensitivity. If the unit "chatters", reduce the sensitivity slightly, until the chatter stops. For maximum performance, operate with the sensitivity as high as possible. The sensitivity can generally be set higher when the Discriminator is on.
