Ring/Stake Locator 500A

Designed with your needs in mind!

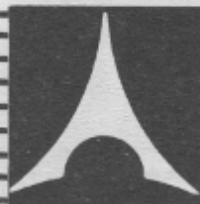

EASY TO USE

NO GROUND INTERFERENCE Ground Eliminating Detector with extra large 12" Search Coil

Compass' deep seeking Ring/Stake Locator 500A is rugged, lightweight, super sensitive and is user friendly. Ease of operation is very important to the rental operator or contractor. Computer controlled circuitry automatically adjusts detector internally so the unsophisticated operator is not required to make any adjustments. Simply set the detector to one of two operating positions and begin searching.

- Ideal detector for all Metal Location requirements except deeply buried pipes or cable.
- RING setting — Ideal operate mode for locating wedding or class rings, jewelry, coins or other valuable metals.
- STAKES or ALL METALS — setting for locating property corner stakes, Gold, Silver, Brass, Lead, large pipes near the surface, valve heads, septic tanks, lost keys and all conductive metals.
- BATTERY REQUIREMENT — Detector operates from 2 each common 9V batteries with 18 hours of operating life.
- Front panel incorporates battery check light, two operate positions and easy view user instructions.

RING/STAKE LOCATOR 500A

Pipe Seeker 5

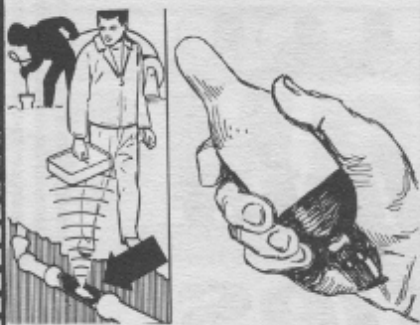

choice of the

PROFESSIONALS

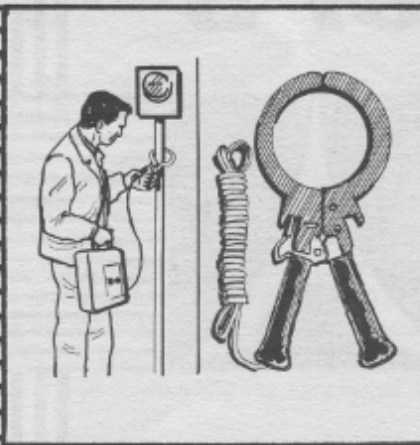

The Most Efficient, Versatile Locator/Tracer Available Today

The Pipe Seeker 5 can be used to trace pipes, cables, conduit, gas lines, etc. by connecting the transmitter portion of the detector to the line and hand carrying the receiver to determine position and depth. To save time, the transmitter can be placed over a known location, and a tone induced in the line which can be pinpointed by hand carrying the receiver without any actual physical connection. Non-metallic pipe and ducts may be traced using the auxiliary Tracer transmitting unit, and electrical conduit can be traced without interfering with the current when using the Inductive Coupler.

OPTIONAL ACCESSORIES

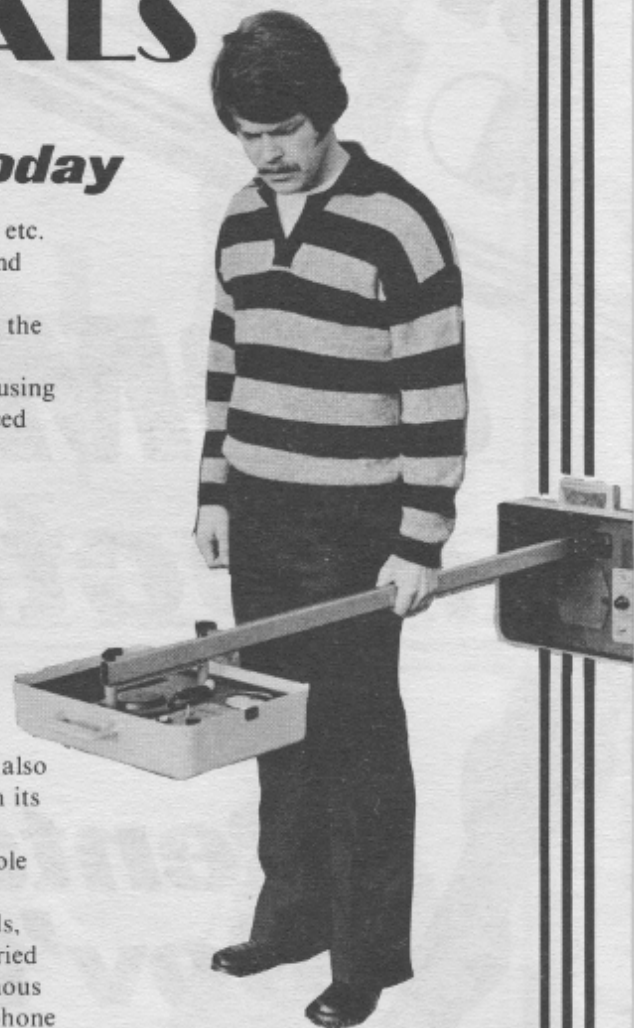

The "Snooper"

Inductive Coupler

With the use of the Inductive Coupler and the "Snooper", the Pipe Seeker's locating abilities are almost endless.

This versatile instrument can also be used as a metal detector in its basic on-handle position for locating pipes, cables, man-hole covers, meter boxes, vaults, conduit, gas lines, sewer heads, septic tanks, and all large buried metal objects. This is the famous Locator/Tracer used by telephone and power companies, city and county sewage and water departments, general contractors, plumbers, building remodelers, state, county or city park agencies, cable TV companies, — in fact, anyone who wants to get a job done quickly and economically!
