## Garrett Crossfire Searchcoils

Garrett's Crossfire is the hottest name in searchcoils. Transmitter/receiver winding arrays "float" in a new tri-point suspension that isolates them from shock and encapsulation stress. The resulting stability permits winding the antennas for peak performance.

Fully submersible Crossfire searchcoils feature total shielding and lightweight, thin-line construction. With super detection depth, 100% scan width and rock solid stability you can scan 25% to 50% deeper, even in the toughest mineralized ground, to detect gold and silver treasures unreachable even yesterday.
