

THE MINELAB FAMILY OF DETECTORS FOR EVERY ADVENTURE!

TOMORROW'S TECHNOLOGY TODAY!

 **MINELAB**

EXCALIBUR

**OUT OF THE PAST COMES THE FUTURE IN METAL DETECTING
THE LEGEND IS REBORN**

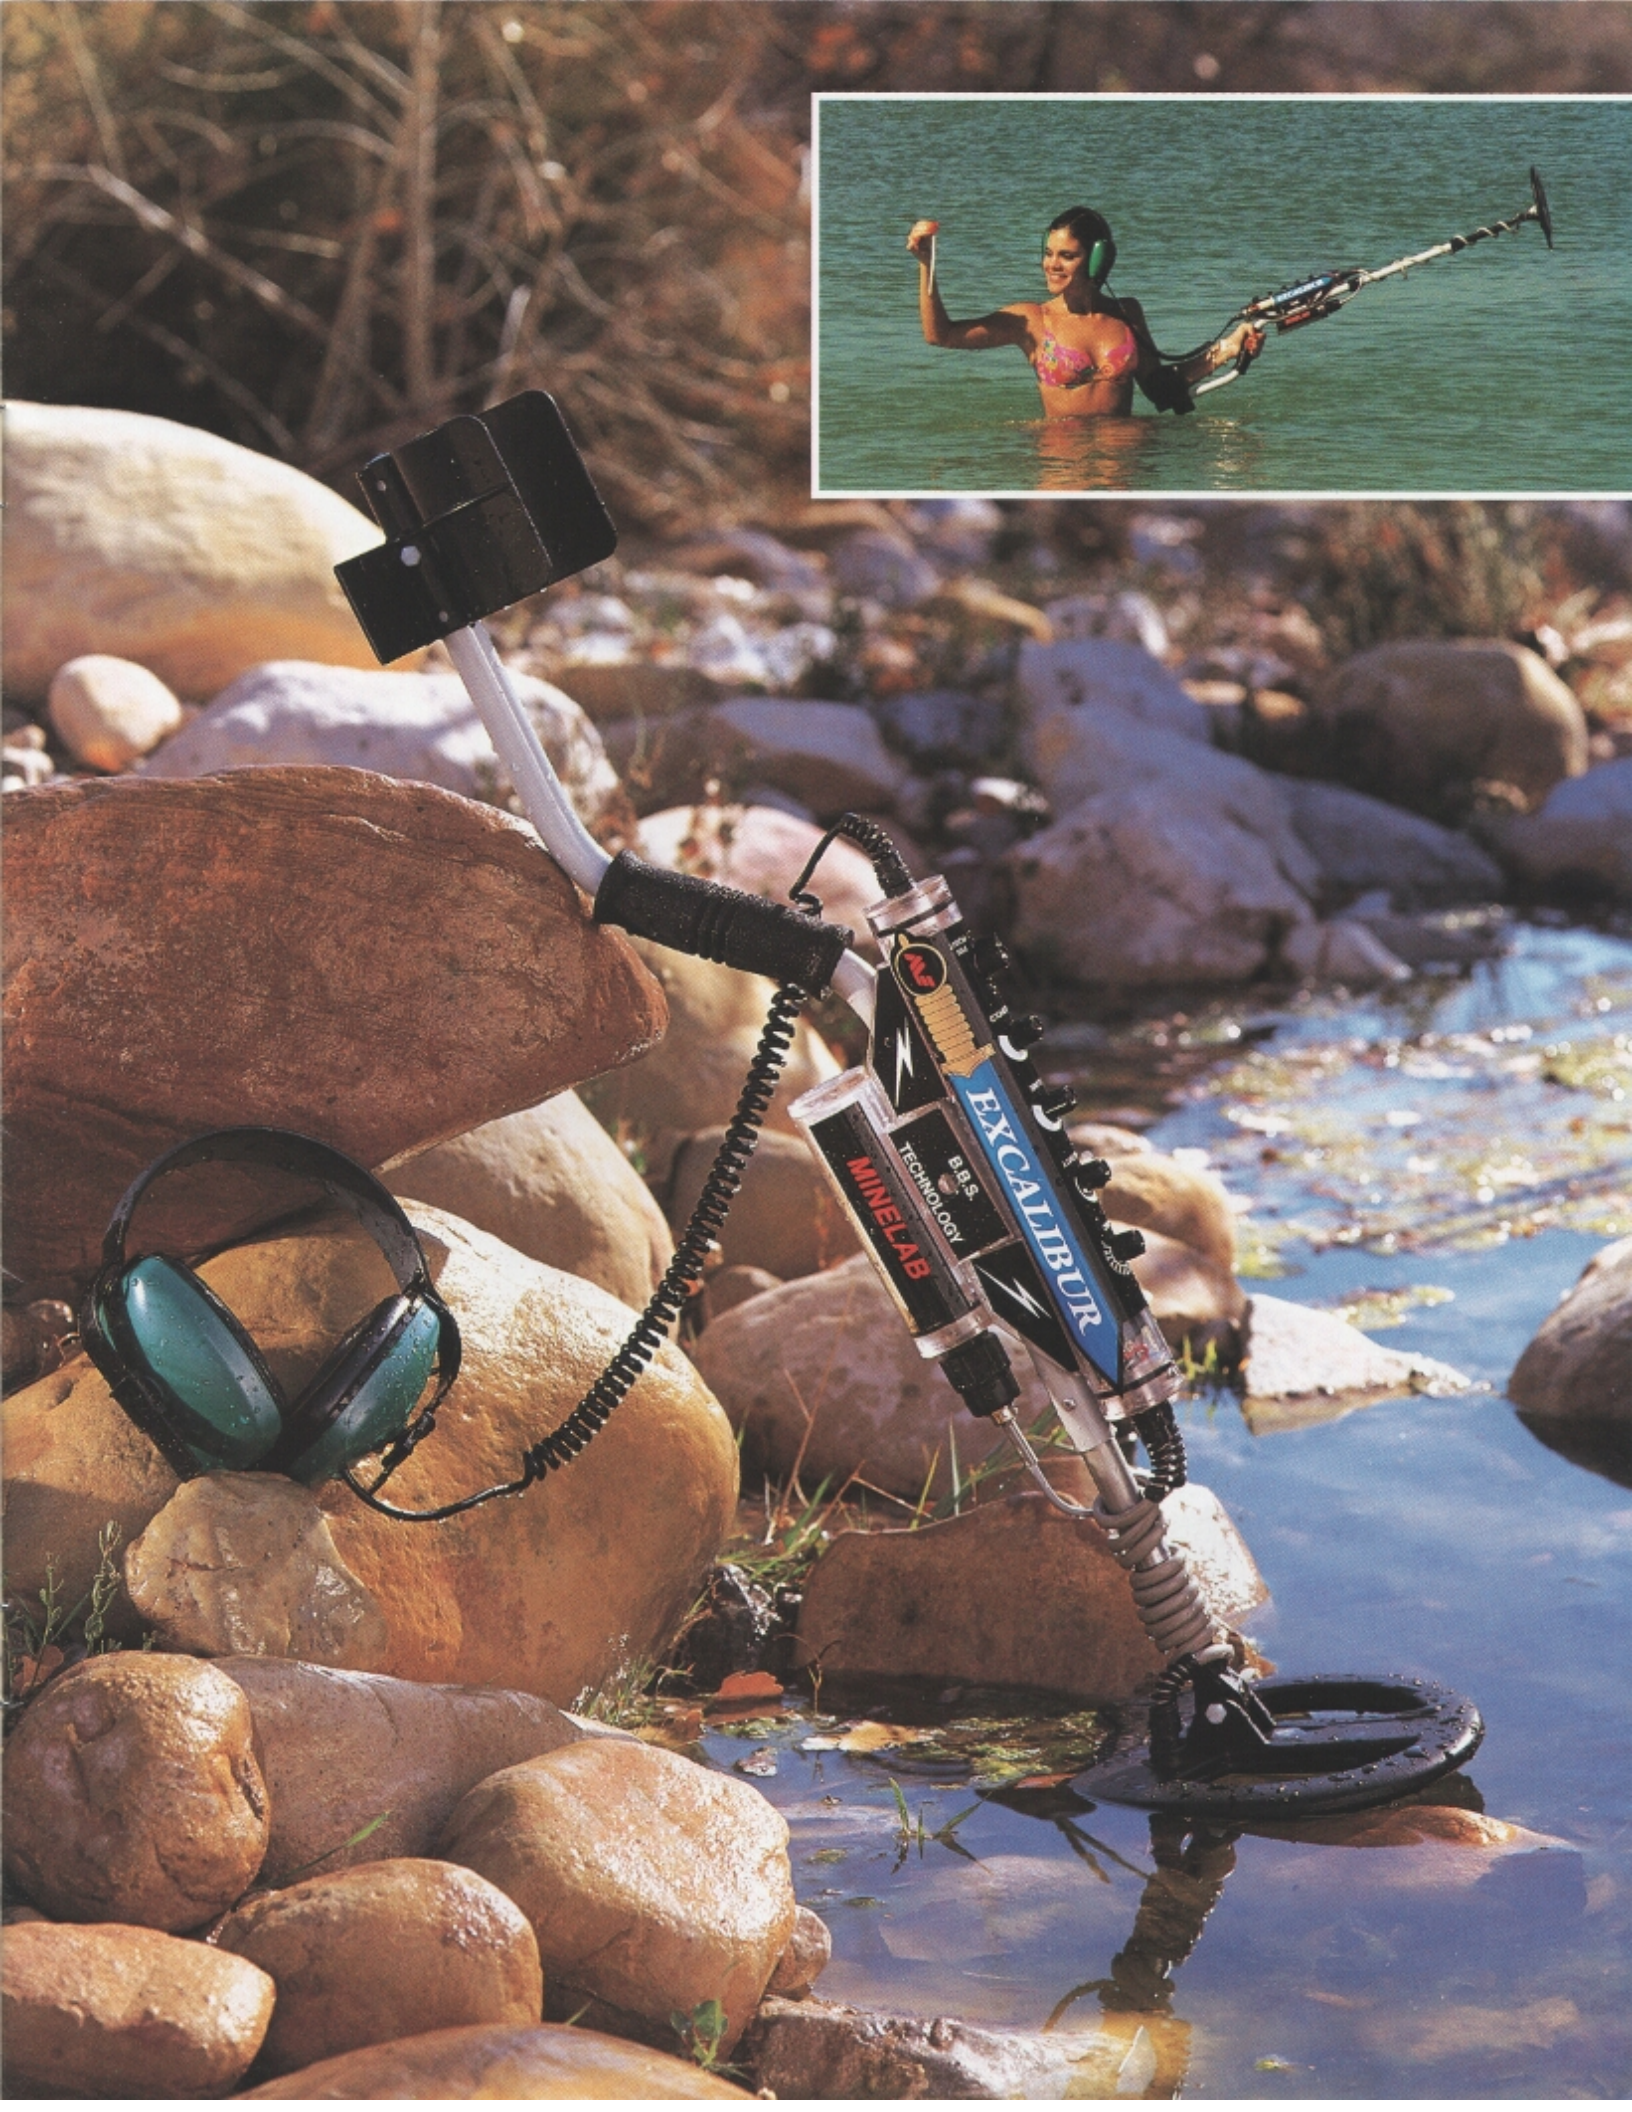

Minelab and the Lady of the Lake are proud to present to you . . .

Let Excalibur by Minelab be your weapon of choice the next time you venture out to the beach or into the water. Excalibur with it's BBS technology gives you the edge to slash through difficult soils and high salt concentrations just as King Arthur defeated the foes of his kingdom with his own Excalibur. Minelab's Excalibur is designed with iron mask which gives you the edge for hunting in areas littered with nails and still pick up the gold and non-ferrous targets. The Excalibur is the first ever underwater machine with 17 separate frequencies to operate simultaneously and multiple tone responses. Gone are the days when you used VLF for fresh water and PI for saltwater hunting. Now you can use the Excalibur and its' BBS circuitry for both fresh and saltwater with equal performance with no penalty in depth. The Excalibur is rated for a diving depth of 200 feet.

1. Excellent depth with accurate discrimination, because of "BBS".
2. No interference from salt water
3. Use on beach, underwater or on land.
4. Sensitivity control for optimum depth for all conditions.
5. Tone Target I.D.

**THE EXCALIBUR
UNDERWATER
DETECTOR RATED FOR
200 FOOT DEPTH.**

SOVEREIGN

BBS THE CUTTING EDGE OF TECHNOLOGY

Minelab's Complete Coin, Relic Treasure Hunting Detector The World Over.
It's the detector that redefined the "INCH WORD" and replaced it with the "DEEP WORD"

- 17 Frequencies 1.5-25.5 kHz
- Audio Tone Target I.D.
- Notch Reject & Discrimination
- Featured EXCELLENT ABILITY TO REJECT IRON, WHILE STILL PICKING UP NON FERROUS TARGETS
- Iron Mask
- Big Target Alert

GOOD REJECTION OF GROUND MINERALS

OPTIONS
Target I.D. Meter
Webbed Coil

These beautiful coins were found in Europe with the Sovereign & "BBS" Technology.

*David Kieth
These relics were recovered from a worked out site. Just goes to show you that no site is ever worked out when a hunter uses the right technology.*

STERLING

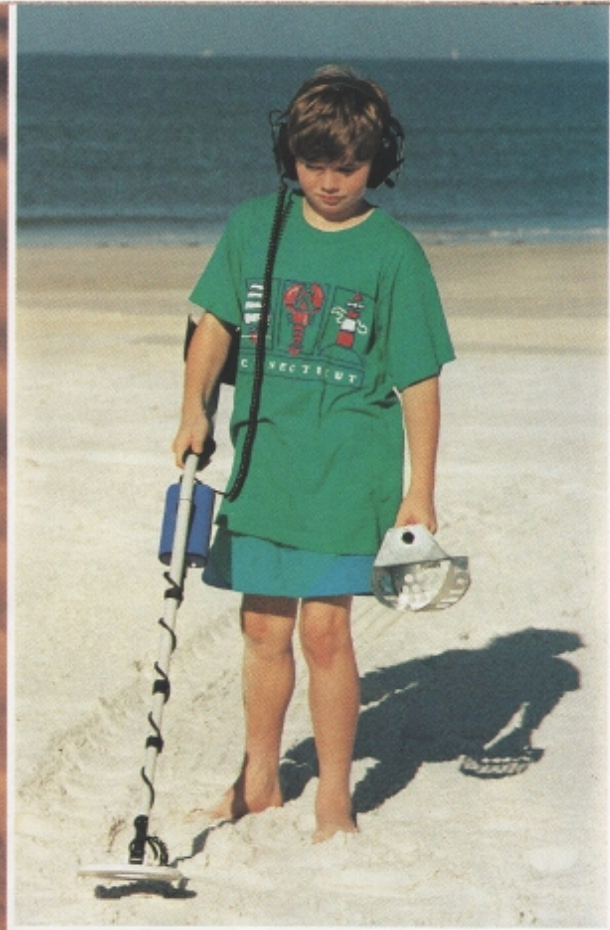

DESIGNED WITH THE COIN HUNTER IN MIND!

- Ideal For The Beginner
- Extremely Simple To Use
- Turn On and Go
- Excellent Pinpointing
- Quick Shut Down
- Substantial Depth Capabilities
- DISCRIMINATOR OPTIMISED FOR COINS

The Professional Will Love The Way It Performs

Quote: By David Kieth

Minelab has done it again! The new **Sterling I** received proved to me that **Minelab** continues to progress on the "Cutting Edge" of technology. In fact it was so light weight it felt like a toy. However, two hours in the field the "Toy" proved to be a power house of a Detector. Digging various small targets of **Lead** (22 bullets), **Brass** (small straight pins) and an **1881 Indian Head Penny** at 6 inches the **Sterling** was not only fast in trash, it even pulled a 1940 m-14 brass cartridge case (circa World War II) out from under 3 nails! My hunting partner's detector checked the target before I dug and his reply was "Iron Trash probably a nail". I dug 22 m-14 cartridge cases dating from 1939 to 1941. Digging a small plug (the **Sterling's pinpointing is unbelievable**) I found a shiny object at 5 inches of hard packed gravel-clay. Calling my partner over, I asked to borrow his knife. I carefully lifted out two silver half dollars. One a **1944 walking liberty** and the other a **1954 Franklin**. Both were in very fine condition. I wrapped the two hour hunt up by finding several **wheat pennies** dating from 1920-1934.

The **Sterling's** operating frequency has been set at 5 kHz. This frequency has been chosen for its high level of sensitivity, particularly for coins. The **Sterling** will also detect gold, brass and other non-ferrous items.

XT17000

BRINGING YOU TOMORROW'S TECHNOLOGY TODAY. THE XT17000 IS A STEP AHEAD WITH TWO FREQUENCIES, YOU HAVE THE BEST OF BOTH WORLDS.

The XT17000 is by far the best gold detector I have ever used. While being extremely sensitive, it is also very stable. I couldn't really upset it on the worst ground I could find. It is a beautiful machine for the first timer or beginner detectorist as unlike other makes, this detector does not need constant ground balancing. The automatic Ground Tracking takes care of that far better than even long time professional operators could.

Reprinted with permission from Australian Gem & Treasure by Jim Forster

The XT17000 is a top of the line unit for gold nuggets, with phenomenal depth in mineralized soil, and auto ground tracking makes it very user friendly. Mineralization is the nemesis of the gold hunter, for if that detector is not properly ground balanced to the area you are hunting, it's a no gold day.

Reprinted with permission from Western Eastern Magazine by Woody Woodworth

The XT will flat get you more gold! It's great on both tiny and deep targets, mainly because of the two frequencies cover all conditions.

Reprinted with permission from Western Eastern Magazine by Don Barthell with the help of Hoss Blackman

No instrument can assure success in the hunt for elusive Gold Nuggets. However, the Minelab XT17000, with its ease of use, exceptional ground balancing capabilities, and extreme sensitivity, can mean reaching that extra depth necessary for success.

Reprinted with permission from Lost Treasure Magazine by Reginald G. Sniff

AUTOMATIC GROUND TRACKING ADVANTAGES

1. EXCELLENT DEPTH EVEN IN HIGHLY MINERALIZED SOIL FOUND IN MOST GOLD FIELDS
2. MORE TIME DETECTING (RATHER THAN ADJUSTING KNOBS)
3. EASE-OF USE
4. MORE GROUND COVERAGE, CONSEQUENTLY MORE GOLD, LESS FATIGUE

*John Reed
Perth, Western Australia*

Jorge Monnerat, Brazil

**A FAMILY'S GOLD HUNTING ADVENTURE
METAL DETECTING IS A FAMILY AFFAIR:**

Kerry Carver has been hunting with his XT17000 for a couple months, with no luck, but READ on!

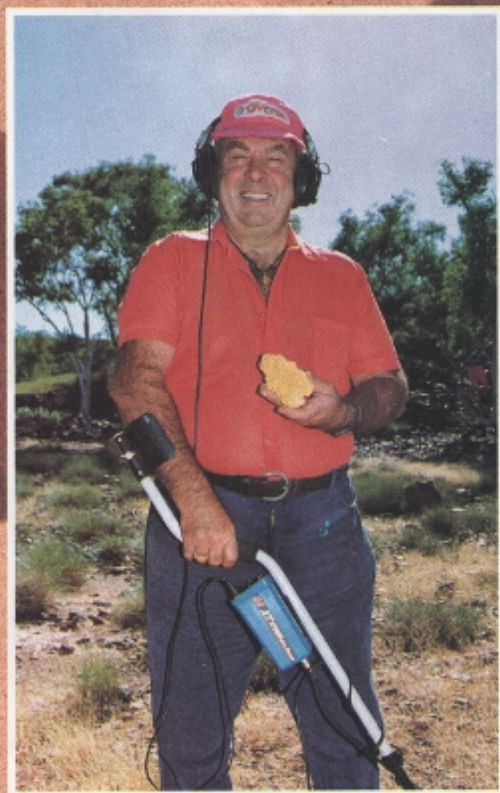

He was undecided as to which way to go so he told Casey (7 year old son) to throw a rock and that's the way they would go. They hunted down the side of a steep ridge, and was working the side of the ridge above the wash when, he got a strong signal. He dug down 15 inches and got his 7 oz. nugget. Casey, you can throw a rock for me any time.

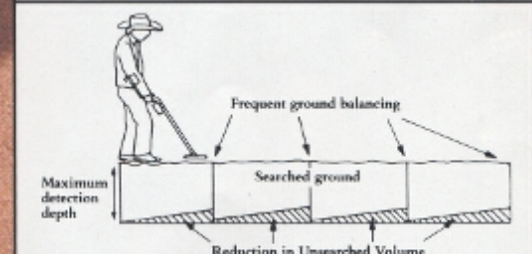

This is the second largest nugget found by Roy & Maria with Minelab Metal Detectors, the first weighing 28 pounds producing 80 oz. of Gold.

Weight 23 Ounces
Roy & Maria Hall of N. T. Australia

000 Extra Tracker

With conventional detectors, ground noises reduce the effective searching depth when you move from where you last ground balanced. Shaded area shows ground not properly balanced.

To compensate for loss of detection effect with a conventional detector, a hard-working goldseeker will ground balance frequently - a time-consuming, not entirely effective method.

With the automatic ground-tracking feature, you cover the ground faster and more effectively. You don't lose detection sensitivity or depth.

American GOLD STRIKER

DESIGNED SPECIFICALLY FOR THE AMERICAN GOLD FIELDS

HOW IMPORTANT IS YOUR TIME?

Important! Then why waste your time on a manual ground balance Detector? Professional Prospectors will tell you on a manual ground balance unit the secret is how often you ground balance. Use the American Gold Striker with its automatic ground tracking capabilities. Spend more time detecting and recovering your gold and less turning knobs.

Simply the Best

- Turn on and go
- 10" "DD" Elliptical Coil
- Variable Tone Adjustment
- Automatic Ground Tracking
- Super Sensitivity to Gold While Ignoring HOT ROCKS!

Automatic Ground Tracking Advantages

- No Loss of Depth
- No Knobs to Turn
- More Time Spent Detecting
- Always in Tune with the Ground Minerals
- Makes the amateur an instant professional

Hoss Blackman

Found five (5) nuggets in a heavily hunted area while field testing the American Gold Striker. The Elliptical "DD" coil makes getting between those rocks and underneath the brush a breeze.

Jim Furehtbar

The Gold Striker is a great machine. I found 8 nuggets at the King Tut Mine in AZ. Sold the machine to a man that had seen the action. He found a nice nugget with it his first day.

TRIBUNE

DESIGNED SPECIFICALLY FOR EUROPEAN SOIL CONDITIONS

As most readers will know, when you are using a detector on an iron contaminated site, each time the search head goes over a piece of iron, any coin near the iron will usually not be detected. This 'blanking out' effect caused by iron literally means that you could put a tea plate over each piece of ferrous and this would represent ground area where you could not normally detect coins. And that could mean an awful lot of field wiped out that could contain coins. (This was the type of field picked for field test.) Upon entering the field, I immediately headed for one of the two contaminated areas.

I switched the detector on and by way of experimental setting, placed discrimination at zero and sensitivity at 7.5. My total find recovered in two and a half hours detecting on this area were: twenty-one Roman bronze coins, two and a half denaro, three brooches and no iron.

To say that I was surprised would be a great understatement.

Reprinted with permission from England Treasure Hunting Magazine (Readers Field Test)

by Mike Bartley

MUSKETEER

DESIGNED ESPECIALLY FOR THE NORTH AMERICAN RELIC HUNTER

The emphasis being placed on low conductivity items. Such as gun barrel parts, buttons, belt buckles, bullets and all those other items that are so dear to Relic hunters' hearts. The field testing has shown that the detector does just that.

"fits the typical MINELAB bill . . . it goes DEEP . . . Dick Noel Field testing the MUSKETEER: "MINELAB has done it again, the new MUSKETEER is the relic hunter's dream come true!"

**EXCELLENT PINPOINTING
DISCRIMINATOR OPTIMISED
FOR RELICS**

- Quick Shut Down
- Just Turn On & Go
- Good Depth Capabilities
- Great for High Trash Areas
- There is No Ground Balancing

Bill Fleming

I am deaf and have been using Metal Detectors for many years. I have designed a device that allowed me to connect my metal detector directly to my hearing aid. My first day in the field with the Musketeer was in a heavily hunted civil war site. I found a total of twelve bullets, a brass bullet casing, a union button, a civil war spur, a copper piece from a harmonica, and a brass tube. It may not sound like much but remember both sites have been hunted for years. The depths of some targets were amazing.

MODEL COMPARISON CHART

1. Broad Band Spectrum effectively consists of 17 separate frequencies transmitted over a range of 1.5 khz to 25.5 khz in 1.5 khz steps. All frequencies are transmitted together at one time.
2. BBS – Broad Band Spectrum is the first operating system to effectively compensate for ground mineralization and remove its effect from the audio output by using multiple frequency transmission.
3. Weight is expressed in pounds (excluding batteries).
4. Head phone jacks are for stereo only.
5. Head phone jacks are set up for stereo/mono.
6. This unit is equipped with both manual and automatic adjustment.
7. Coil configuration Round (R) Elliptical (E) Webbed (W) Elliptical Donut (ED).
8. (1) Beach, Relic, Coin. (2) Gold, All Metal. (3) Beach, Underwater (200 Ft.). (4) Coin. (5) European conditions. (6) Relics.

WHAT IS BBS TECHNOLOGY?

Unlike other metal detectors which operate at just one frequency, or even the "newest" two frequency machines, "The Sovereign" actually transmits over a wide spectrum of frequencies. The resulting signal that is received from a target buried in the ground is processed by a microprocessor that removes interference caused by ground mineralization which limits the depth at which targets can be found, and often results in inaccurate target identification. The remaining signal can then be analysed to determine the actual composition of targets even if they are deeply buried, or if the ground is highly mineralized.

Mike Warren

As you can see by the pictures, I do well. The competition on the Beach has increased in the last few years. If I want to consistently find the goodies I had to get serious about treasure hunting. So I use the most serious machine on the market, The Excalibur (previously I used the Sovereign) with its proven BBS technology and its new underwater housing design its truly "TOMORROW'S TECHNOLOGY TODAY" with the Excalibur's ability to slash through heavy iron laden and salty soils, it's destined to become the serious treasure hunters detector of choice.

You will receive the time and attention only a genuine local full service dealer can provide.

MINELAB

EXPERIENCE THE ADVENTURE

INTRODUCING THE STERLING

Good things come in small packages!

The Minelab design and development team has taken all your suggestions and come up with the **STERLING**, a new detector that is sure to surprise everyone. Our fax machine has been cranking out accounts of early field tests in all kinds of terrain and the consensus is that this machine is going to be popular. We have found it to have *excellent depth* and good discrimination. First time users will like its small size and straight forward controls. I'm sure the first things to catch your eye will be the new very *compact shaft breakdown* will fit into a small suitcase and the advanced technology of the *thin elliptical donut coil*. It is light weight and easy to use. **RETAIL \$399.**

STERLING ADVANTAGES

- * EASY OPERATION
- * LIGHT WEIGHT
- * COMPACT BREAKDOWN
- * UNIQUE SMALL HOUSING
- * EXCELLENT SENSITIVITY
- * FREQUENCY 5kHz
- * GOOD DISCRIMINATION
- * EASY ASSEMBLY
- * THIN ELLIPTICAL DONUT CONCENTRIC COIL THAT IS 8 IN. HEEL TO TOE 6 IN. WIDE
- * WEIGHT LESS THAN 3 LBS.

The design of the **STERLING** is ideal for the younger generation, with the ease of pinpointing and destination of good targets makes this machine ideal for children or young adults, who would like to learn to metal detect and not have the frustration of A complex detector to learn how to use.

TURN ON AND GO, NO GROUND BALANCING, NO COMPUTER TO LEARN TO USE, NO MISTAKES, YOU'LL KNOW A GOOD TARGET WHEN YOU HEAR IT!

MINELAB DOES IT AGAIN!!!

DESIGNED A DETECTOR, THE MUSKETEER, ESPECIALLY FOR THE NORTH AMERICAN RELIC HUNTER

Good things come in small packages!

The Minelab design and development team has taken all your suggestions and come up with the **MUSKETEER**, a new detector that is sure to surprise everyone.

The emphasis being placed on low conductivity items, such as **Gun Metal Parts, Buttons, Belt Buckles, Bullets** and all those other items that are so dear to a relic hunters heart.

The accounts of early field tests in all kinds of terrain, the consensus is that this machine is going to be popular. We have found it to have **excellent depth** and good discrimination. The professional will like its small size and straight forward controls. I'm sure the first things to catch your eye will be the new very **compact breakdown Shaft, which** will fit into a small suitcase. The advanced technology of the **thin elliptical donut coil** makes pinpointing as easy as cutting hot butter.

AT \$399, YOU HAVE NEVER BEEN ABLE TO GET SO MUCH FOR SO LITTLE!!

MUSKETEER ADVANTAGES

- * EASY OPERATION
- * EASY ASSEMBLY
- * COMPACT BREAKDOWN
- * UNIQUE SMALL HOUSING
- * EXCELLENT SENSITIVITY
- * FREQUENCY 5kHz
- * DISCRIMINATOR TUNED TO LOW CONDUCTIVITY ITEMS
- * THIN ELLIPTICAL DONUT CONCENTRIC COIL THAT IS 8 IN. HEEL TO TOE 6 IN. WIDE
- * WEIGHT LESS THAN 3 LBS.

OPTIONAL COILS: 6 AND 8 INCH ROUND DOUBLE "D" 12 INCH ELLIPTICAL DOUBLE "D"

The design of the **MUSKETEER** is ideal for hunting in the woods or in the open field. With discrimination and the ease pinpointing makes this machine ideal for new comers to the hobby, or young adults, who would like to learn to metal detect and not have the frustration of A complex detector to learn how to use.

TURN ON AND GO, NO GROUND BALANCING, NO COMPUTER TO LEARN TO USE, NO MISTAKES, YOU'LL KNOW A GOOD TARGET WHEN YOU HEAR IT!

AUTHORIZED MINELAB DEALER

American Gold Striker

Designed specifically for the American Gold Fields

Simply the Best

Automatic Ground Tracking
Variable Tone adjustment
Inch Double "D" Elliptical Coil
Extremely sensitive to Gold while Ignoring
HOT ROCKS!

The American Gold Striker is the newest gold detector manufactured by MINELAB ELECTRONICS. Minelab has designed the American gold striker with the American gold fields in mind, by providing you with an Elliptical coil as standard equipment.

Minelab is a manufacturer that has designed Detectors with you the user in mind, by designing detectors for local conditions, whether it is America Europe or just using detectorist participation.

Hoss Blackman
Two trips to a heavily hunted and very highly mineralized area, and five (5) nuggets field testing the **American Gold Striker**.
Extremely sensitive to those small nuggets. The Elliptical Double "D" coil makes getting between those rocks and underneath the brush a breeze.

How important is your time?
IMPORTANT! Then why waste your time on a manual ground balance Detector? Use the American Gold Striker with its automatic ground tracking capabilities. Spend 70% more of your time detecting, not turning knobs.

American Gold Striker Specifications

Length	Max. 4 Ft. 6 in.
Weight	Min. 3 Ft. 10 In. 00001
Configuration	Complete Excluding Batteries 3 Lb. 5 oz.
Transmission	Shaftmount Yes
Ground Rejection	Hipmount Yes
Search Modes	Single Frequency VLF 32KHz
Controls	True Automatic Ground Balance Yes
Audio Output	Track GB, Motion with Threshold Yes
Overload	Fix GB Motion with Threshold Yes
Batteries	Threshold + On Off 10 Turn
Search Coil	Sensitivity 10 Turn
	Volume 10 Turn
	Tone 10 Turn
	Gold 3 Pos. Switch
	Soil 2 Pos. Switch

	Moisture Resistant Loudspeaker Yes
	1/4 inch Headphone Jack Stereo
	High Pitch Tone Yes
	12V Nicad pack Standard Yes
	8AA Alkaline (optional adapter) Yes
	Duration 10 to 15 hrs
	Winding 10x5x5" DD
	Weight 1 Lb
	Cable Length 86"

Metal Detecting is truly a family affair, just ask the Kerry Carver family, recently Kerry and his young son(7) Casey was out gold hunting and wasn't sure which to start detecting next, Kerry told Casey too through a rock and that is the way they would go, well Casey did and guess what Kerry found a large Nugget weighing almost 7 ounces. The nugget was found with the XTT7000 in 32 kHz at about 15 inches

The children Carry 7 and Candice 10 entered a hunt recently in which they each found a lot of coins plus Candice found the token for a Fifty-Dollar bill. Thats a great way for family fun.

MINELABS EXTRA TRACKER 17000

The new XT 17000 is not a replacement for Minelabs famous FT 16000 (Klondike) which will continue to be made. However the XT17000 does build on the successes of the FT 16000 with its automatic ground tracking micro-processor ability to handle highly mineralized ground.

The XT 17000 has a number of value added features which will place it a cut above any other gold machine on the market today! These features include:

- 1) Two separate frequency settings: 6.4 kHz and 32 kHz. The 6.4 kHz setting being biased towards larger deeper nugget detection and the 32 kHz setting being suited for smaller grain sized surface gold.
- 2) 8 inch double "D" coil comes standard.
- 3) *Optional Coils available*
10 inch elliptical concentric wound
10 inch elliptical double "D" these coils recommended for the 32 kHz setting. Price: \$129.95

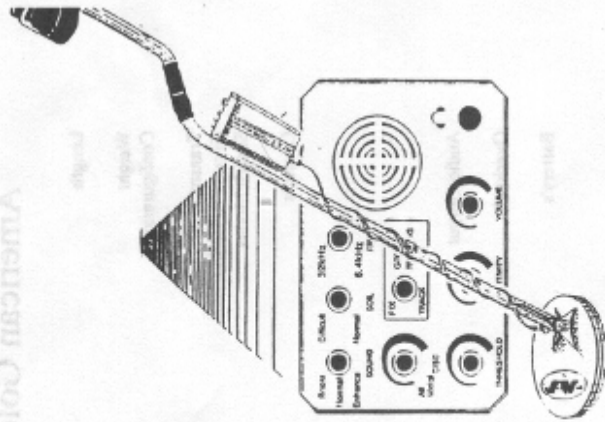

4) A rechargeable nicad battery pack as a power source (being the same pack as used in the Minelab Sovereign.) With an accessory adapter, the XT 17000 can also accept AA alkaline batteries.

5) A variable tone control adjustment for personal tone refinement.

6) The 8 inch round coil now has a new "flat bottom shape" which has proven to be more sensitive than the previous "dome shaped" coil bottom.

7) The electronics of the XT 17000 are more efficiently designed and produce a "quieter detection capability," particularly in "hot ground."

Therefore the XT 17000 is in fact "Two" detectors in one. Tremendous value at a recommended introductory retail price of only \$879.00

AUTOMATIC GROUND TRACKING

The following simplified diagrams show how Automatic Ground Tracking (ATG) in the XT17000 allows you to cover more ground in less time.

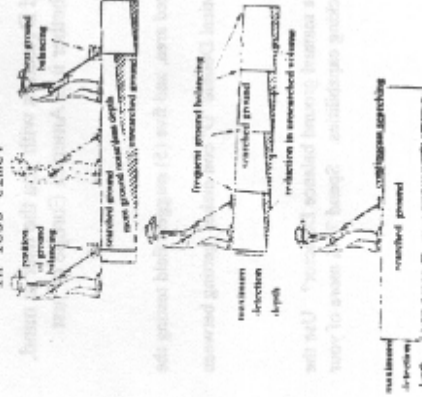

Figure 3 shows how genuine automatic ground tracking covers all the ground quickly and effectively. For this to occur, the detector must track quickly enough and not reduce in sensitivity.
