Find What You've with Minelab's exciting New

Minelab's powerful high performance Explorer sets the new standard in metal detecting technology. Minelab's latest exclusive **FULL BAND SPECTRUM (FBS)** technology featuring **28 simultaneous operating frequencies** from 1.5 kHz to 100 kHz gives greater depth and better target identification. Superior FBS technology means a wider variety of more desirable targets, incredible depth and more target information in your hands to Find What You've Been Missing!

Put the power of the Explorer to work!

Start hunting within seconds of turning on the **Explorer XS**. Use Quickstart factory presets or adjust individual functions, sensitivity, volume, discrimination, pinpoint, etc. just by pushing a button, **it's that easy!** In Advance mode the combinations are almost endless, resulting in the world's most advanced metal detector!

The deep penetrating submersible 10 inch all weather coil has its concealed cable running inside the fully adjustable square shaft. Just one of the innovative new features of this well built, rugged, yet sleek all new amazing detector.

Minelab's Explorer is an impressive combination of breakthrough technology and ease of use.

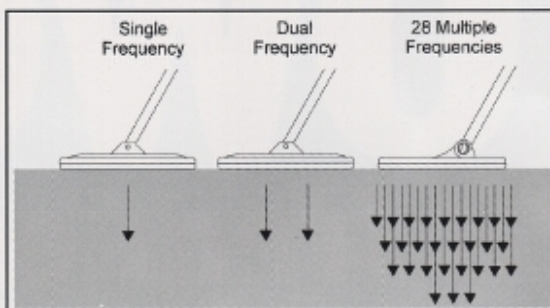

The dynamic fully integrated control panel incorporates breakthrough technology with a full function **Co-ordinate Target Identification (CTI)** digital display system featuring Minelab's exclusive Smartfind™.

Smartfind™ does what no other detector can!

Smartfind™ displays a target's characteristics using a two dimensional display of target discrimination.

(1) vertical position rates the target on size/conductivity and
(2) horizontal position rates the targets resemblance to ferrous characteristics. With Smartfind™ you have the most accurate discriminating system in the world.

28 Simultaneous Operating Frequencies

Great New Features

- Exceptional Depth
- Target Profiling with 2D Smartfind™
- Large easy to read display
- Tone ID for targets
- Target depth indication
- Simple push button menu control
- 10 Inch submersible searchcoil
- Easy to use Quickstart program
- Full function Advanced program
- Drop-in battery case - NiMH (Nickel Metal Hydride) rechargeable batteries, 12V car and 110V charger
- High quality headphones
- Lightweight, ergonomic comfort

Find the treasure, others miss with Full Band Spectrum (FBS) technology.

Two Models to Choose from
Explorer XS and Explorer S

Try the World's Latest & Most Advanced Detector...

Been Missing... Explorer XS

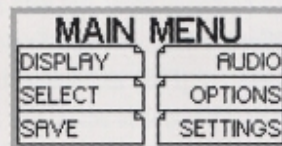

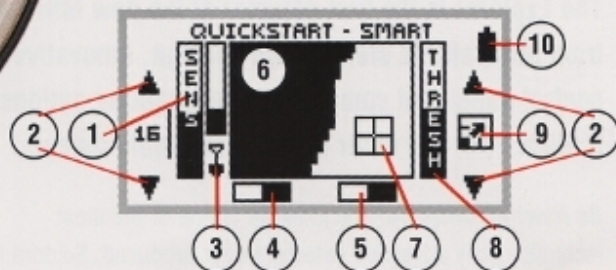

Never before has discrimination and Target ID been so accurate and so easy to use!

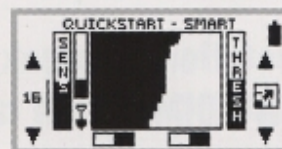

Smartfind™ Screens

Quickstart Display

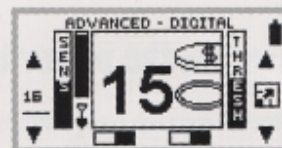

- | | |
|----------------------|------------------------|
| 1. Sensitivity Level | 6. Smartfind Display |
| 2. Adjustment Arrows | 7. Target Cross Square |
| 3. Depth Indicator | 8. Threshold Level |
| 4. Iron Mask | 9. Full Screen |
| 5. Pinpoint Mode | 10. Battery Life |

Main Menu screen allows user to select from six different options.

Select this screen and start hunting. The detector will automatically ground balance and detect nonferrous objects.

Digital Display gives target identification in easy to read icons.

Amazing Breakthrough in New Metal Detecting Technology!

Minelab... the company that brought you the world's most advanced gold detectors and the world leader in metal detector technology is proud to introduce a totally new and exciting detector...

The Explorer!

Minelab's Unique Technology

The Explorer is the first detector of the new Millennium from Minelab. Its sleek, sturdy design, innovative control panel and comprehensive targeting options set it apart from any other detector available today!

Its New! Its Different! The Explorer is one of the most technologically advanced detectors ever produced. Seldom in the detector industry can a company come out with a totally new innovative detector. **Minelab has!** The new Explorer series with exclusive Full Band Spectrum (FBS) technology uses 28 simultaneously operating frequencies acting like an underground net capturing the greatest amount of targets (valuables) hidden deep in the ground. **Find what other detectors miss!**

The most revolutionary breakthrough is Smartfind™ TWO DIMENSION target ID.

The "Target Crosshair" makes both locating and ID-ing targets easier than ever before. With this system, find only the targets you want.

Designed to give you the power to find more!

Three years of painstaking research and design went into the development of this new detector series. Now get greater depth and work any soil type. Explorer will handle any condition and keep on producing. From the coil up, you can use the many exclusive features that will aid you in recovering more treasures. The detector is extremely strong and durable. Made for a lifetime of use. **Nobody makes it better!**

Powered by a new slim-line drop in battery system that accepts alkalines or Minelab's new Smart Charge system. This dramatic

design is the world's first detector system using Nickel Metal Hydride rechargeable batteries. You need not run your batteries down before recharging. Recharge them at any time, regardless of use time. Smart Charger will sense when the batteries are at full charge and automatically switch off.

Explorer is available in 2 models, (the Explorer XS and the Explorer S), model options are explained below...

Explorer Series	S	XS
HARDWARE		
Alkaline Batteries (8) Holder	Yes	Yes
NiMh Battery & 110V Charger	No	Yes
12 V Car Charger	No	Yes
Backlight Screen	No	Yes
Shortcut Buttons	3	4
Headphones	Yes	Yes
Coil Stand	No	Yes
USER FUNCTIONS		
Smartfind Discrimination	Yes	Yes
Learn Accept/Reject Mode	No	Yes
Edit Targets Mode	No	Yes
"Save" Disc. Masks	No	Yes
Manual Noise Cancel	Yes	Yes
Auto Noise Cancel	No	Yes
User Memory Settings	2	2

2 Year Warranty

Two Year Parts and Labour on the Control Box
One Year on the Search coil
