Note: Minelab reserves the right to make changes without notice and offer different configurations in different countries.

Packed with features including 17 frequencies, automatic Ground Tracking, Iron Mask –on/off; manual & automatic sensitivity, 2-band Noise Cancel and much more. The on-board computer chip handles all the work so you can concentrate on what you want – more good targets.

The Tornado™ Coil system is lightweight, ultra tough, waterproof and non-buoyant. It is ideal for anywhere you want to use it. The Tornado coil has its own on-board transmit circuitry adding power and depth to this outstanding detector. Whatever you're looking for, Minelab's Sovereign GT has the penetrating power and versatility you need. Discrimination circuitry lets you eliminate signals from unwanted trash, while the Iron Mask enables you to detect valuable targets lying close to ferrous junk.

The Sovereign GT discriminates between good targets and unwanted trash with astonishing depth and can be used from the park or building site to the sandy beach or the gold fields.

SOVEREIGN GT OFFERS

Minelab's BBS Technology automatically transmits 17 separate frequencies over a range from 1.5khz to 25khz. This means you have more depth, greater sensitivity and more accurate discrimination.
