

Sovereign XS-2

BBS Technology

Minelab's new Sovereign XS-2 line features Minelab's unique BBS multiple frequency technology.

Automatically operating at 17 individual frequencies at the same time, the Sovereign XS-2 detectors penetrate to incredible depths to find targets out of the reach of other detectors.

The addition of a new Digital Target Indication meter to the Sovereign XS-2 Pro enhances the existing discrimination features. The DTI meter provides you with a numerical readout based upon the type of object detected, to help you accurately identify the type of object found before recovering it from the ground.

The Sovereign XS-2 detectors are supplied with a newly designed waterproof all terrain BBS coil. These coils are extremely stable, super sensitive and are tough enough to take a beating.

As simple as "Switch On & Go", the Sovereign XS-2 detectors will find you more good targets.

Sovereign XS-2 Pro Control Box

Sovereign XS-2 Control Box

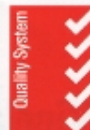

Digital Target Indication meter

- Produces a numerical reading of the object detected
- Enhances target discrimination
- Large display to enable easy reading
- Large numerical separation between targets
- Ferrous objects produce a minus readout for easy identification
- Compatible with all models of Minelab Sovereign
- Easily calibrated to suit individual coil size, soil conditions, and target type
- 12 Month Factory Warranty
