

NEW RELEASE

XT 18000 GOLD DETECTOR

The FIRST EVER Triple Frequency,
Automatic Ground Tracking
GOLD DETECTOR in the
WORLD

XT 18000 GOLD DETECTOR

Automatic Ground Tracking

The following simplified diagrams show how **Automatic Ground Tracking (AGT)** in the **XT 18000** allows you to **cover more ground in less time.**

Figure 1 shows **normal searching without AGT.** Ground noises reduce the effective searching depth when you move from where you last ground balanced. The shaded area shows ground which is not properly searched.

Figure 2 shows how a hardworking experienced professional will avoid missing gold and treasure in that area. The detector is re-balanced more often which is very time consuming.

Figure 3 shows how **genuine Automatic Ground Tracking** covers all the ground quickly and effectively....

.....covering more ground in less time.

Designed specifically for the American gold fields

The new Minelab XT 18000 now has three nugget hunting frequencies; **6.4 kHz; 20 kHz; and the new SUPER SENSITIVE 60 kHz.**

This frequency combination maximizes detection depth and enables super sensitivity to tiny gold nuggets of less than 1 grain in size.

The XT 18000 features Minelab's unique **Automatic Ground Tracking System** found in the XT 17000 and Gold Striker. This is the only truly effective system enabling you to...

The new **10" elliptical coil** is super sensitive to tiny nuggets, extremely light weight, easy to swing, and is shaped to move easily through the brush.

The new **"Iron Reject"** discrimination mode enables you to leave unwanted iron trash items such as nails in the ground while digging only gold nuggets.

The **"Target Signal Response System"** has been enhanced to enable you to more easily hear target signals from gold. This will dramatically increase the number of nuggets that you'll find!

A new **"Drop In"** battery system enables you to quickly and easily change re-chargeable battery packs while you're out hunting.

.....detect more ground, more deeply and in less time - you'll spend less time ground balancing and more time finding nuggets!

...with the XT 18000 I've found gold nuggets so tiny I could hardly see them - the sensitivity of this machine is truly amazing!"

John Gladdis field testing the XT 18000

Suggested List Price \$930⁰⁰

SPECIFICATIONS

- Coil:** - 10" Elliptical "Double D" Coil
- Optional Coils:** - 8" round DD coil & 11" round DD coil
- Batteries:** - NiCad Battery Pack
- Frequency:** - 6.4kHz, 20kHz and 60kHz
- Warranty:** - 2 years on Control Box, parts and labour
- Search Modes:** - Ground Adjust - Automatic or Fixed
- Discrimination - All Metals or Iron Reject
