and performance”

Teknetics 8500

LOOP Smaller outside-larger inside. Ultra lightweight 7¼" outside, but transmit coil is same size as major competitors 8" loop.

ROD Black Anodized rectangular rod uncommonly sturdy and smart looking. Recessed into case so instrument lays flat.

HANDGRIP Molded just for you. A custom feel that lasts even after hours of TH'ing.

ISOLATOR The shape of things to come. Rectangular and super tough with Delta Wing Nuts to attach to loop.

BATTERIES Plug the charger into the detector and a wall outlet and charge overnight in the "NORM" charge mode, or maintain your charge for long term storage in the "STORAGE MODE". Battery life expectancy: 7 to 10 hrs. continuous use per charge. 14 individual Nicad Cells. Batteries and charger come as standard equipment.

SPEAKER New 3x2 oval high output speaker for maximum loudness and efficiency.

CASE Won't dent, rust, warp, scratch, peel, or chip. Maintains its new appearance in spite of hard use and harsh elements.

HEADPHONE JACK ¼" stereo headphone jack tucked into back end of case protected from dirt, and rain.

MORE DEPTH
½ inch or more than other top competitors, because of the new technology in the TEKNETICS loop.

Coins are presently being detected at 12 inches with top of the line detectors. With a TEKNETICS you should be able to get the older coins that are at 12½ to 13 inches.

DEPTH READING AND COINREADING

If you hunt in the G.B. Discrimination Mode, you can read out the probable target and then press-in and hold the button to pinpoint and read-out the probable depth. In the G.B. Mode, once a good target has been located, press and release the push button to reset the depth scale. Place the loop on the ground directly over the target, when the meter shows the closest distance to the target, you'll be centered right over your target.

RADIO NOISE FILTER CIRCUIT
In some areas of the country, a good "motion" detector may have problems functioning properly, due to a radio tower in the area. So far every area we have tested with our 8500 we have been able to hunt. In some "noisy" areas their units failed while TEKNETICS had no problems. The EXCLUSIVE RADIO NOISE FILTER can really make a difference.

BALANCE
In a word perfect. As you take hold of the grip, the instrument assumes the normal search position.

DEPTH READING
Don't scratch your valuable finds. By knowing how deep to probe you can be more careful as your probe gets closer to the depth of your coin. Also the depth reading is always on scale and never pegs, so pinpointing with the meter can be more accurate than ever before.

PUSH BUTTON MODE CHANGING
No need to push a toggle switch several times to get to the mode you want, just press and hold in the button and you're in the other designated mode.

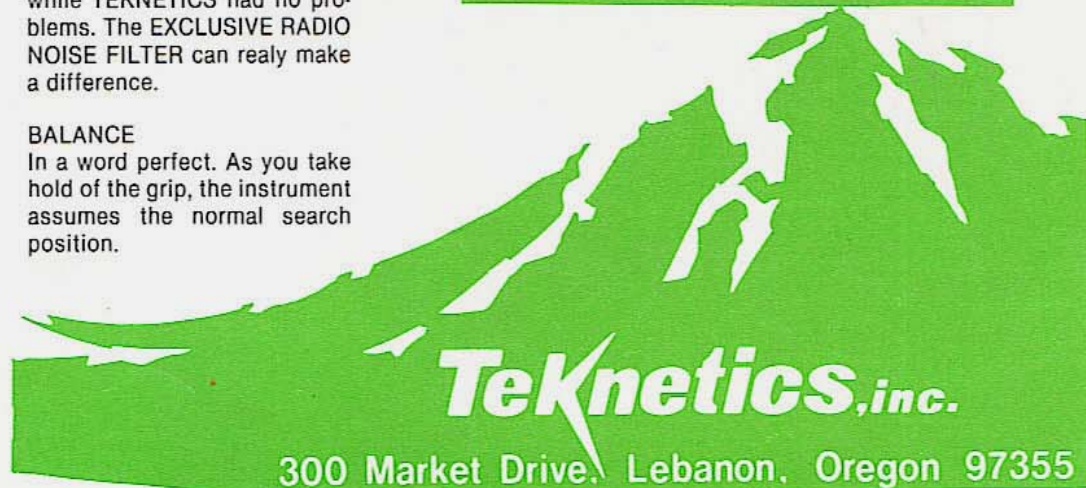

REFINED DISCRIMINATION
Discrimination means being able to selectively rule out "good" from "bad" targets or knowing as much as possible about the target before you dig, and what better way than with "Target Identification".

SERVICE AND WARRANTY
Six year limited warranty. Sealed case so service will always be performed by factory trained technicians to assure our customers that their unit will perform to the same rigid standards of quality it had to meet when it first left the factory.

OPERATING FREQUENCY:

WEIGHT 4 lbs. 12 oz.
OPTIMUM HUMIDITY RANGE 0% - 75%
OPTIMUM TEMPERATURE RANGE 33° - 100°
POWER REQUIREMENTS: 9v 7 12v DC
LOOP DIAMETER 7½ inch
LOOP WEIGHT 9¾ oz.
LOOP TYPE: BI-PLANAR CONCENTRIC

MODES OF OPERATION:
G.B., G.B. DISC., G.B. MAX & T.R. DISC.
METER READOUT
