

THE NEW TEK S/T

- Unequaled in design and performance
- Ultimate depth and discrimination
- Extraordinary versatility

ALL-IN-ONE TREASURE DETECTOR

Excellent for divers!

Totally submersible to 30 feet in salt or freshwater, the S/T is the first detector electronically designed to balance out saltwater. This breakthrough in TEK-nology has opened a new world for treasure hunters.

For beach combers, the S/T is unrivaled in its versatility. Saltwater does not affect the S/T's performance. With Auto-tune, the S/T maintains optimum performance under changing conditions.

In the Blacksand and Saltwater modes, the S/T performs at maximum sensitivity without falsing. This capability provides you with excellent results hunting in high mineralized or high salt areas.

"In my opinion, operation (of the S/T) at this high sensitivity and without false signals is a breakthrough for the water hunter." FRANK BAKER
from Western & Eastern, September 1987

Exceptional land operation!

The S/T provides outstanding performance for ultra-deep coin hunting and small nugget hunting on land. Two levels of discrimination are also provided for optimum performance.

COIN HUNTERS - no more disappointing trash targets! The S/T has built-in true ferrous rejection and variable sensitivity for increased accuracy.

RELIC HUNTERS - locate more targets than ever before! The new electronic circuitry has created an incredible increase in depth. The S/T locates to TWICE THE DEPTH of conventional detectors.

PROSPECTORS - locate the tiniest of gold nuggets! With the S/T's capability of ultra high sensitivity and fine tune ground balancing, combined with 'normal' or 'high mineralized' operation, insures optimum success for the nugget hunter.

Teknetics S/T features:

Design Highlights

- Lightweight - only 4.5 pounds
- Perfectly balanced - with new armsaver design
- 10" open search coil - water tight, thin and non-bouyant
- Padded armcup, custom grip and fingertip control
- Sealed for underwater and all weather use
- Built-in charging system - for longer battery life
- 8 matched and welded NiCad C-cell batteries
- All new detector design

Control Functions

- Easy to use preset markings and automatic functions
- Expanded range feature of the ground control is easier to set and more precise than a 10 turn control
- Loud alert audio has positive response to weak signals
- New Saltwater mode - for underwater and beach hunting
- New High mineral mode - ideal for prospecting and black sand beach hunting
- 3 toggle operation - fingertip controls for quick selection of Land, Water, Saltwater, High mineral or Freshwater use

Accessories

- Designed to accept interchangeable coils
- Accepts standard headphones and underwater headphones
- Optional speaker box - for use without headphones
