STATE-OF-THE-ART METAL DETECTION

The Teknetics Story.

All the right stuff for your treasure hunt.

When you hunt with the best equipment, you find more treasure. You have a lot more fun, too.

A Teknetics detector is the right stuff for the hunt. Here's the story.

We're the leaders so you stay ahead.

Teknetics products reflect our on-going efforts to lead the industry with technical innovation.

With nearly 30 years of combined experience, our engineers have been responsible for most of the industry's major technological advancements. We hold patents on many of these important design innovations, and we have patents pending on other significant developments.

We're proud of our detectors. And we work hard to develop features and performance you can't find in any other product line.

They stand up, and we stand behind them.

Teknetics detectors stand up in hard field use because they're very well built.

Family fun starts with Teknetics. Standard pole mount and body mount options with or without headphones. Also see our Teknetics-engineered Bounty Hunter line of high-tech coin finders.

We manufacture all Teknetics products in our Lebanon, Oregon, factory, where quality control is strict. Each product is quality-checked repeatedly during assembly, and all instruments are computer tested twice—after board assembly and just before final assembly.

We stand behind our designs with our limited lifetime warranty. If your detector ever needs repair, just send the unit to us.

They're designed to be fun, too.

Our products are absolutely the most sophisticated metal detectors on the market. But we're also committed to making technology fun, so our quick-set controls and easy-to-read meters make these detectors a snap to operate.

Try any one of our fine Teknetics detectors and see the difference our right stuff makes. Call or write for our new catalog.

Mark I^{Ltd.}

Program it to find what you want it to find.

With the Mark I's Programmable Target Select,[™] you can accept or reject any combination of objects. And with its remarkable depth capability, you lose no detection sensitivity when looking for the "deep ones."

The new Mark I Ltd. features an improved meter design for easier reading, as well as a distinctive new red case and loop top.

9000B™

This is the technology nobody else can touch.

The 9000B has led the industry for five years. And still, no other company has the technology to produce a detector with the 9000B's capabilities.

Four-filter design gives unequalled performance in highly mineralized soils. At a glance, the exclusive Liquid Crystal Display indicates operating information. And you get the most refined target definition anywhere.

8500B™

With the 8500B you get the best for less.

Here's a way to get industry-leading performance and value too. The 8500B gives you all the operating capabilities of the 9000B except the dual-reading LCD bar graph. So, the 8500B costs a little less.

In fact, outstanding performance and value have made the 8500B one of our most popular detectors.

8000™

It's the best of both worlds.

Here it is: advanced technology and simplified operation combined. One-sweep lets you find your target quickly. Then, the analog meter clearly shows depth and target identification.

With 4-mode operation, crystal-controlled circuitry and Teknetics reliability, it is a bargain by any standard.

TEKNETICS. FUN FOR THE WHOLE FAMILY!

Hit the treasure trail with the Big Bud.™

Here's why the Big Bud leaves the others behind.

Take a close look at this chart. You'll see that the Big Bud has features not found on competitive detectors—features like Auto-Notch discrimination, Loud-Alert audio, and Deep Coins Blanker capability. And the Big Bud's unique Nickel Protection circuitry lets you adjust to a high level of trash rejection without losing nickels and small gold items.

You'll also see features normally found on more expensive instruments. Target Identification, ultraslow sweep VLF discrimination, All Metals pinpointing, and powerful depth capabilities make your hunting easier and more rewarding.

Make Model	Bounty Hunter Big Bud	Tesoro Golden Sabre	Fisher 1265-X
Suggested retail	\$399.00	\$399.00	\$499.95
Silent search	Yes	Yes	Yes
Slow-sweep Disc	Yes	Yes	Yes
Auto ground reject	Yes	Yes	Yes
Sensitivity control	Yes	Yes	Yes
Variable Disc	Yes	Yes	Yes
Convertible mount	Yes	Yes	No
All Metals with pinpoint	Yes	No	Yes
Auto-Notch system	Yes	No	No
Nickel protect	Yes	No	No
Meter	Yes	No	No
Target ID	Yes	No	No
Loud Alert audio	Yes	No	No
Deep Coin (Blanker)	Yes	No	No
Meter battery check	Yes	No	No
Knock-down pole (optional)	Yes	No	No

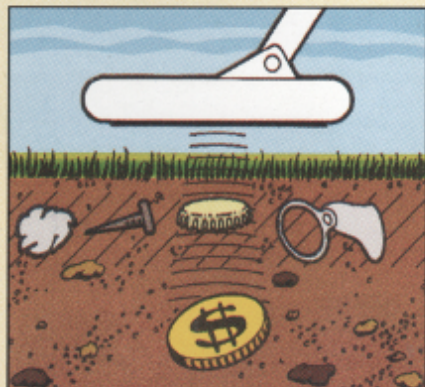

You can get right to it.

With many standard detectors, you spend time adjusting controls to get the best performance. And if the settings aren't right, you get bad results.

The Big Bud solves all this. Its automatic features let you just turn it on and start hunting. And with the Big Bud, you get features no other detector offers—at a price that may surprise you.

Blanker™ capability gets rid of surface trash.

The Big Bud's Blanker capability lets you focus on the more valuable deep finds. Simply flip a toggle switch, and the Big Bud ignores the top three inches of soil, where most trash lies. You'll get exciting results, even in junk sites.

Blanker capability ignores, or "blanks out," surface trash and seeks out the more valuable deeper treasures. Only the Big Bud has this capability.

And leave the others eating your dust.

Big Bud's exclusive Auto-Notch automatically rejects trash. You can combine Auto-Notch with Blanker capability to locate Deep Coins Only.

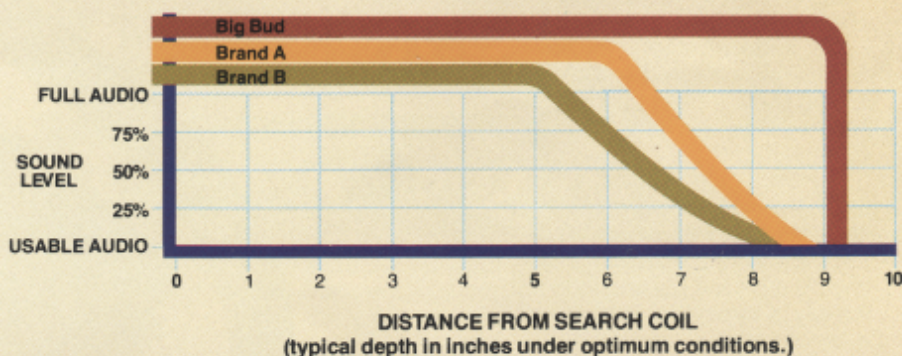

Auto-Notch™ leads you to the coins.

Turn the Power switch to Coins Only, a unique automatic "windowing" system we call Auto-Notch. The Big Bud automatically rejects most common forms of trash: pull-tabs, screw caps, iron, and light foil. The Big Bud targets the most common coins, even nickels and the accompanying small gold rings. Targets show clearly on the Visual Target Identification meter display.

Loud Alert™ keeps you on the track.

Here's yet another Big Bud exclusive that pays big returns. With other detectors, audio volume decreases with increasing target depth. That means you can miss a target, especially when you're hunting in noisy conditions.

Loud Alert keeps the Big Bud's audio signal at peak strength, right down to the deepest target. While others are listening to faint whispers, you hear full-volume, distinct signals that lead you to the treasure.

While other detectors lose audio volume with depth, Loud Alert gives a full-volume signal for all detected targets.

The whole family can get involved.

The Big Bud is the perfect instrument for young and old, regardless of experience. Lightweight and a breeze to operate, it's quickly convertible from pole-mount to body mount. And it's available with an optional knock-down pole for compact storage.

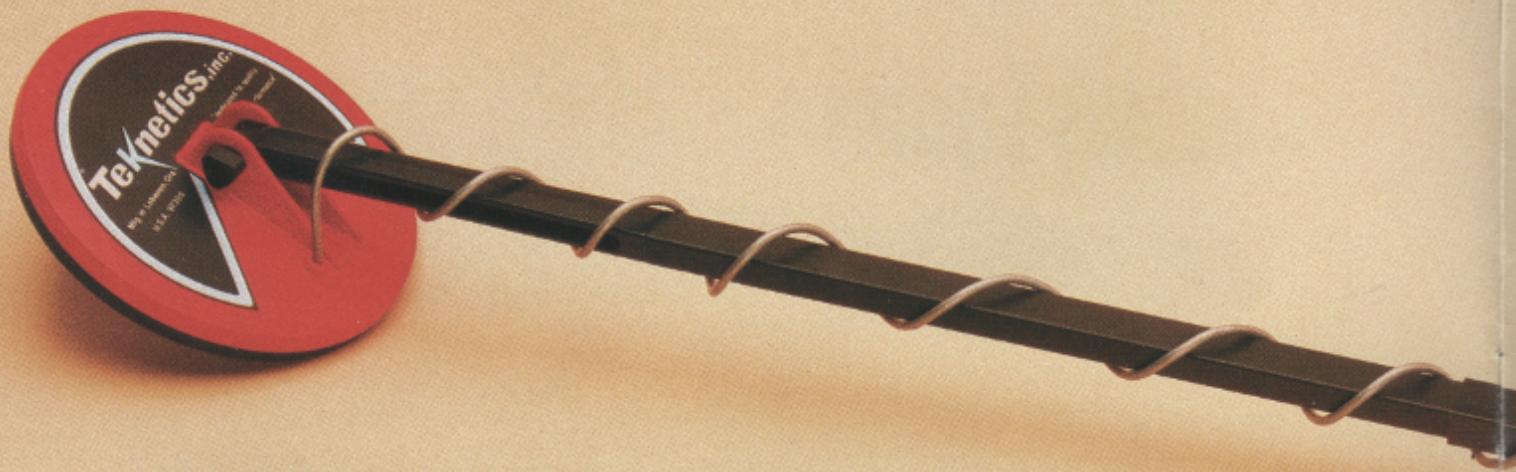

Hit the treasure trail with Big Bud, and leave the others way behind. Call or write for our new catalog and

the address of your nearest Bounty Hunter dealer.

Spring into action with our Spring Special on the Teknetics Mark I ^{Ltd.} _{TM}

Here's the deal on our Mark I Ltd. Spring Special.

There's never been a better time to buy a Teknetics Mark I. You save money, and you get the special edition Mark I Ltd. in the bargain. The package also includes our 10" loop.

The Mark I Ltd. features a new, attractive meter design. It's even easier to read than before. And the Mark I Ltd. comes with a distinctive red case top and loop top. It really is something special—at a special price.

Here's what you get.

Normal
Retail
Price

Mark I Ltd. with new meter design and red case top. Includes 7 1/4" loop with color-coordinated red top . . . **\$749.00**

10" accessory loop. Ultra-thin design for easy swinging . . . **79.95**

Normal price . . . **828.95**

Spring Special Price . . . \$699.00*

*Offer expires June 30, 1986

\$699*

**SPRING
SPECIAL
PRICE**

The Mark I Ltd. features a **new meter design** that's even easier to read. At a glance, the meter identifies the target, gives you a depth reading, and reports on battery condition.

The Mark I Ltd. Spring Special includes this **10" loop**—a great accessory that will make your Mark I even more versatile. It's especially effective for coin shooting, and you can use it for shallow underwater hunting, too.

The loop's ultra-thin design and open construction make swinging and pinpointing easy, even underwater. And it weighs no more than a typical standard loop.

Teknetics' fantastic Mark I.

Program it to find what you want it to find.

Now there's a way to find exactly what you want to find. It's called Programmable Target Select,™ and it's available only on the Teknetics Mark I.

With a few simple adjustments, Programmable Target Select lets you reject or accept (notch) any combination of objects. For example, you can set the Mark I's discrimination to locate all coins (including nickels) while it rejects pull-tabs, screw caps, nails, and foil. And with its remarkable depth capability, you lose no detection sensitivity.

Turn junk sites into paydirt.

Programmable Target Select pays big returns in the field. In trashy sites, you can get the nickels and rings without digging a lot of trash. In older, worked-out areas, the Mark I's depth capability lets you find the deep ones.

The Mark I is loaded with other features, too. Audio and Visual Target Identification let you know what's there. Depth reading tells you how deep the treasure lies. And in the discriminate mode, you can effectively pinpoint in an area as small as 2" x 2". Use the toggle to switch to All Metals VLF for even more precise pinpointing.

When you set conventional detectors to reject pull-tabs, you also lose nickels and the small gold rings that often read as nickels.

With Programmable Target Select, you can easily set the Mark I to reject trash and to select the valuables you want to find.

Programmable Target Select is so refined that you can program the Mark I to focus on just one class of objects, while it rejects everything else.

Programmable Target Select lets you reject or accept (notch) any combination of objects. It's a Mark I exclusive.

It's a snap to operate, too.

The Mark I is a sophisticated detector, but it's also easy to operate, even for the novice. Quick-set controls with handle-mounted toggle operation let you make fast adjustments. The easy-to-read coin/depth meter gives you critical information at a glance.

The rugged, slim-line housing resists impact and hard use. As with all Teknetics instruments, the Mark I carries our limited lifetime warranty.

Try the Mark I, and see the difference Teknetics technology makes. Call or write for our new catalog and the address of your nearest Teknetics dealer.

TEKNETICS/BOUNTY HUNTER

Accessories

These accessories can make your treasure hunting more enjoyable, and more productive.

Loops and loop covers

We manufacture all our loops under strict quality control standards.

Our standard ultralightweight 7¼" loop has the same coil size as our competitors' 8" loops. For greater depth, add our new Super 8 or 12" loop (A above). All loops are waterproof and built to give years of trouble-free operation.

Our loop covers (B) protect against abrasion and other field damage.

Headphones

Hear the weak signals with our stereo headphones (C). The jack fits all Teknetics and Bounty Hunter models.

Body-mount conversion kits

Kits are available for all Teknetics instruments (D) and for the Bounty Hunter Big Bud and Bud 1.

Jackets and caps

Our jackets look sharp on any hunt. Our fleece-lined 100 percent nylon jacket (E) features easy-action raglan sleeves, two roomy slash pockets, and snap front closure. The windbreaker (F) has two slash pockets and snap front closure. Both are available with the Teknetics logo.

The cap (G) with Teknetics logo fits all sizes.

Carrying cases

Sturdy vinyl cases protect your instrument. Style 1 features solid construction inside and out with a cover design (H). Style 2 has lock latches and soft foam interior (I). A soft vinyl case is available for the RB Junior (J).

Available but not shown is our new 10" loop. A great accessory—especially effective for coin shooting, its ultra-thin design and open construction make swinging and pinpointing easy, even underwater.

Available soon will be a new knock-down rod for the Big Bud line, as well as a convenient day-pack carrying case.
