BANDIDO II μMAX

Tesoro Electronics is very pleased to announce the latest in Metal Detector technology with the introduction of the Bandido II μMax. Since the very first Silver Sabre was produced, we at Tesoro have made it our goal to make powerful metal detectors in small, lightweight housings. This continued with the Silver Sabre II and the Sidewinder. Each model was an improvement over the previous detector. With the addition of the Max Boost technology, the μMax series of detectors took on our heavyweight competitors and beat them in every field.

The Bandido II μMax uses special low noise integrated circuits originally developed for use in the analog sections of high performance microcomputers. Low noise circuitry was designed to stop small changes in the signal voltage (called noise) from going to the microprocessor. When used in detector circuitry, low noise components stabilize the circuits and allow the machine to be used with even more gain than before. Increased gain will give better audio response to a wide variety of targets, while the lower noise levels will keep the unit running smoothly even when hunting with the sensitivity well into the boost zone.

Relic hunters and professional treasure hunters will find the Bandido II μMAX to be the detector for them. The 3-3/4 turn Ground Adjust knob gives the user the ability to fine tune the machine to get the maximum depth and sensitivity in any ground condition. Along with an adjustable ground balance, the Bandido II μMAX uses the same Tesoro discrimination that serious detectorists have come to rely on. The detector will operate in a silent search motion discriminate mode or a no motion all metal mode with either a normal or auto retune of the threshold, thus, giving the user the widest possible range of detecting methods.

SPECIFICATIONS

- Operating Frequency 10 kHz
- Searchcoil Size 8 inch diameter
- Searchcoil Type Round, open center concentric
- Searchcoil Cable Length Approx. 3 foot
- Audio Frequency Approx. 630 Hz
- Audio Output 1½ inch speaker and headphone jack
- Headphone Compatibility ¼ inch stereo plug
- Weight 2.3 pounds (may vary slightly)
- Battery Requirement One 9 volt DC (alkaline)
- Battery Life 10-20 hours (typical)
- Optimum Temperature Range 30° F to 100° F
- Optimum Humidity Range 0 to 75% R.H.
- Operating Modes No Motion All Metal
..... Silent Search Discriminate
- Tuning Modes Normal Tune (manual)
..... Auto Tune (fast)

Tesoro Electronics, Inc. reserves the right to modify or improve the design without further notice.

BANDIDO II μ MAX

Relic Hunting, Coinshooting, Gold Nugget Prospecting, Cache and Competition Hunting.

Can one detector do it all?

It used to be that you needed a closet full of detectors to do everything, but the Bandido II μ Max was designed to do just that, EVERYTHING. From the gold fields to the relic sites and along the coast lines, this detector handles it all. Features include the famous Tesoro discrimination, a manually tuned ground adjust, and several operating modes. The Bandido II μ Max is ready to perform anywhere and in any kind of ground condition.

Lightweight. The new Bandido II μ Max is still ultra-lightweight. We have stuffed superior technology into the same μ Max housing, and it still weighs less than 2 1/2 pounds—and that includes the batteries! You'll be able to swing your μ Max detector all day without fatigue.

Simple Battery Change. We have redesigned the μ Max housing to allow "drop-in" battery changes. This new holder eliminates the need to fool around with twisted or broken battery leads giving you more time in the field treasure hunting.

Positive Pole Locking System. The new Bandido II μ Max comes with a pole locking system designed to take the play out of your detector's pole. This improves the control and feel while using your detector, increases your sweep speed in competition hunts, and improves your pinpointing accuracy.

Lifetime Warranty. As with every Tesoro detector, the new Bandido II μ Max comes with a Lifetime Warranty. We are so confident in our product that after 17 years in business, we are still the only company in the business that offers one. You can buy a Tesoro with complete peace of mind knowing that the company will stand behind you and your detector.

Low Noise Circuitry. Tesoro is on the leading edge of detector technology again by using special low noise integrated circuits. These integrated circuits were designed for the analog sections of the world's latest high-tech microcomputers and help the detectors run with a higher gain. The extra gain increases the audio response to smaller and deeper targets while keeping our celebrated Tesoro discrimination, thus, giving you both depth and discrimination in the same package.

Good Value. By keeping up with the latest technological advances in both the digital and analog fields, we have been able to adapt them for use in our detectors. This helps keep our engineering costs low and allows us to offer the latest technology at a reasonable cost. The new Bandido II μ Max is our latest step in the evolution of uncomplicated μ Max power.

❖ Lightweight ❖ High Gain ❖ Low Noise ❖ Lifetime Warranty
