

"THE NAME THAT MEANS TREASURE"

STINGRAY II

Whether hunting on land, in fresh water, in surf or salt water, the Stingray II will give you the performance edge you need. The Stingray II finds coins, relics, jewelry, and gold nuggets everywhere it goes. The Stingray II is the most advanced waterproof detector available.

- Interchangeable Coils
- 12 kHz Frequency
- Three Operating Modes
- Expanded Discrimination
- Ground Balance Control
- Waterproof to 200 feet
- Built-In Headphones
- Lightweight Design
- Lifetime Warranty

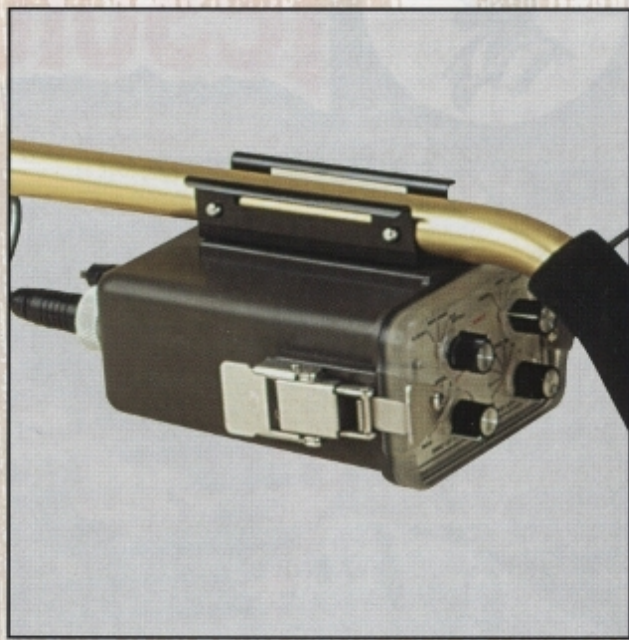

Stingray II Concentric Searchcoils

7" \$129

8" \$139

10.5" \$149

shown with optional short diver's lower pole \$28

Superior circuitry and exclusive feature design make the Stingray II the perfect all-purpose machine for any soil conditions, wet or dry. The Stingray II features both VLF and TR modes with All Metal, No-Motion and Motion Discriminate operation. The variable speed Auto Tune makes precise target locating easy. The Stingray II is fast and sensitive. Any water detector will find big targets. Experienced detectorists report that no other water machine finds fine gold jewelry and chains like the Stingray II.

\$699⁰⁰
with 8" Stingray II coil

PIRANHA

The Piranha rips through heavy minerals and salt water to hunt down even the tiniest of targets. Pulse Induction power with Tesoro's super-sensitive Printed Spiral Searchcoils make this the perfect beach and surf detector. Nothing escapes the Piranha and nothing stops it!

- Interchangeable Coils
- Single Knob Simplicity
- Motion All Metal Mode
- Mineral-Free Operation
- Super-Sensitive Coil
- Waterproof to 200 feet
- Built-In Headphones
- Lightweight Design
- Lifetime Warranty

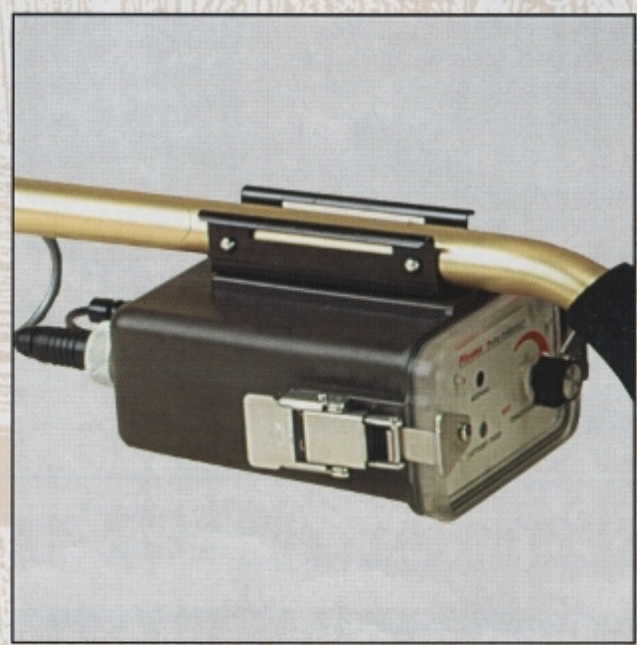

Piranha Printed Spiral Searchcoils

7" \$129

8" \$139

shown with optional short diver's lower pole \$28

10.5" \$149

Extreme soil conditions of black sand, alkaline or wet salt sand are no match for the Piranha's Pulse Induction circuitry. Unlike VLF detectors, the Piranha's All Metal Mode with Auto Tune ignores minerals and operates smoothly without complex controls. Tesoro's revolutionary Printed Spiral Searchcoil takes PI technology to a new level of sensitivity. The Piranha finds hard to detect items like fine gold chains, earrings and gold flakes. And the Piranha is priced substantially lower than other PI detectors.

\$599⁰⁰
with 8" Piranha coil

TOLTEC II

- Target ID and Coin Depth
- VLF 12 kHz Frequency
- No-Motion All Metal Mode
- Auto or Manual Retune
- Silent Search Discriminate Mode
- Built-In Mineral Rejection
- Pole or Body Mount
- Lifetime Warranty

Toltec II Searchcoil

Interchangeable 8" Concentric Searchcoil With Monolithic Shielding and 8' cable

The Toltec II's Visual Target Identification and Depth Meter help you "see" your treasure before you dig it. As the winner of deep competition hunts, the Toltec II is proven to be sensitive. Tesoro's innovative Hybrid High Gain Circuitry—utilizing advanced surface mount technology—delivers accurate, reliable performance when you need it most.

The Toltec II features Tesoro's famous Expanded Discrimination that gets those hard-to-find, low conductive targets like small gold rings and fine gold jewelry. The controls are easy to use. Select Auto Tune to reduce external interference. Select Normal Tune to lock in on deep targets when pinpointing, checking target size, or ground sampling. The control housing can be body mounted instantly while the ID meter stays on the pole for convenient viewing. The ID meter is easy to read and is lighted for night operation.

\$599⁰⁰

with 8" Concentric coil

GOLDEN Sabre II

- Dual Tone Target ID
- VLF 12 kHz Frequency
- No-Motion All Metal Mode
- Three Silent Search Discriminate Modes
- Notch Accept and Reject
- Built-In Mineral Rejection
- Pole or Body Mount
- Lifetime Warranty

Golden Sabre II Searchcoil

Interchangeable 8" Concentric Searchcoil With Monolithic Shielding and 8' cable

The Golden Sabre II is big on treasure and tough on junk. Tesoro's famous Expanded Discrimination has been taken to a new performance level with Variable Notch Filtration and Dual Notch Tone Target ID. This innovative design system helps take the guess work out of treasure hunting and puts you in control of what you will search for.

The Golden Sabre II rejects minerals and trash at the same time. The Notch Reject mode will find nickels and small gold rings while rejecting most pull-tabs. Notch Accept will find a particular range of targets. Dual Notch Tone ID gives a low tone for targets below the Notch Level setting and a higher tone for targets above the setting. Variable Notch Window along with Tone ID puts you in control of what you are searching for. The No-Motion All Metal mode makes pinpointing fast and accurate.

with 8" Concentric coil

DIABLO μMAX

Gold Prospectors! Those "unhuntable grounds" are now open for harvesting with the Diablo μMAX. Gold masking ground minerals, hot rocks and severe soil conditions are no match for the Diablo μMAX. You'll experience greater sensitivity, depth and smooth operation even where other machines can't go!

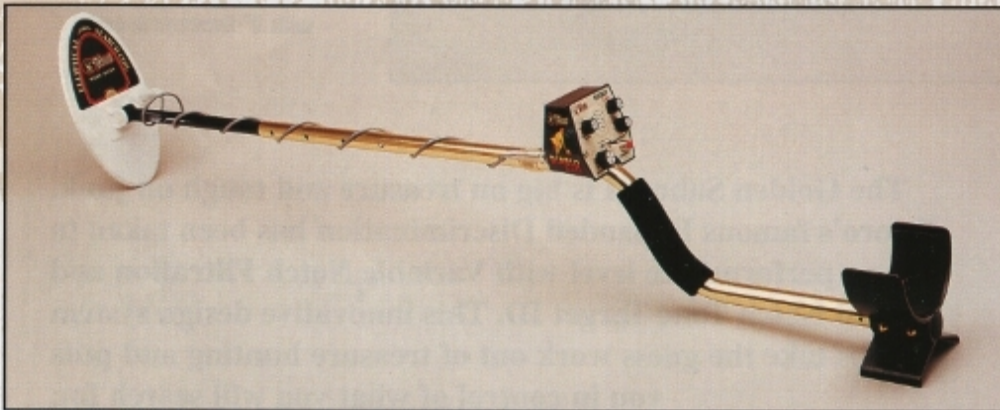

- MicroMAX Design
- VLF 17.8 kHz Frequency
- All Metal Operation
- Fast Automatic Retune
- Three Position Ground Switch: Normal Ground, Black Sand, Hot Rock
- 3 3/4-Turn Ground Balance Control
- Exclusive Hot Rock Adjust
- Instant Push-Button Pinpointing
- Ultra Smooth Operation In Extreme Mineralization
- MAXBoost Sensitivity
- Increased Depth
- Single 9 Volt Battery
- Ultra-lightweight Design
- 3-Piece Knockdown Pole
- Lifetime Warranty

The Diablo μMAX is designed on a simple principle. You gold prospect in the ground, *not* in a showroom and when you prospect you don't want the ground to hide any gold from you. No other detector in its class cuts through ground minerals to find gold like the Diablo μMAX. Where others "chatter" in severe, gold-hiding ground conditions, the all new μMAX circuitry delivers smooth operation. The Hot Rock Adjust helps end useless digging and finds more hidden nuggets. Go for all the gold, *anywhere!*

\$599⁰⁰

with 10" Elliptical Wide Scan coil

OPTIONAL SEARCHCOILS FOR DIA

The specially designed 10" elliptical wide detectors is the best all-around nugget hunter differently. Smaller sizes give better results soils, (especially when moist). Larger sizes nuggets.

Concentric searchcoils give better discrimination nuggets when "air testing" and in lightly mineralized soils that can be best in heavily mineralized soils that can be

Elliptical searchcoils offer better pinpointing shallow nuggets. Larger, round wide scan

Design Engineer's Report on the Diablo μMAX

When Jack hired me in '95, there were just a few high-performance, professional gold prospecting detectors on the market, two of which I had designed. Jack wanted a new model that would equal the best of them in sheer performance, and beat them in heavily mineralized ground. He also wanted what none of our competitors had—the combination of light weight, user-friendliness, smooth response, and lower power consumption that is distinctively Tesoro. The new model also needed a feature that would deal with troublesome "hot rocks." If we could accomplish all of this, we'd have a model that was flat out better than existing models. One more thing...the price had to be reasonable. We didn't know how much of this we'd actually be able to achieve.

It took a year of intensive effort, but we surpassed even our own high expectations. Our new Diablo μMAX has an *unmatched* combination of smoothness and in-ground performance, and it's much lighter than other machines. The Hot Rock Adjust makes easy what expert nugget shooters have been doing (with difficulty) for years—identifying hot rocks by the change in response when the ground balance point is shifted. Plus, improved ground "see-through" capabilities allows it to find tiny nuggets *in the ground* without the disadvantages of high frequency operation.

Experts who field tested it often described it as "a real sweetheart of a machine"—words that could hardly be applied to other "real" gold machines. Any drawbacks? Well, other machines will occasionally beat it in "showroom air tests." But that's OK with us—most people do their gold prospecting out in the rocks and dirt, not indoors.

7" Elliptical Wide Scan \$109
8" Round Concentric \$129

7" or 10" Elliptical Scuff

The Lobo SuperTRAQ is the pinnacle of electronic gold prospecting technology. No other detector gives you the fast, accurate and reliable ground tracking in normal and severe soils like the Lobo SuperTRAQ. Tesoro's famous discrimination circuitry lets you relic and coin hunt too.

- SuperTRAQ Computerized Ground Tracking System
- VLF 17.5 kHz Frequency
- All Metal Auto Tune Mode
- Adjustable Threshold
- Silent Search Discriminate Mode
- Instant All Metal No-Motion Pinpointing
- Three Ground Tracking Modes: Normal Soil, Alkali, Black Sand
- Ultra Smooth Operation In Extreme Mineralization
- MAXBoost Sensitivity
- Increased Depth
- Pole or Body Mount
- Lightweight Design
- Lifetime Warranty

The Lobo SuperTRAQ is simply one of the finest gold nugget metal detectors you can buy. Tesoro's SuperTRAQ Computerized Ground Tracking System solves the detectorist's greatest problem—ground balancing. No matter where you hunt, the Lobo SuperTRAQ will quickly self-adjust to eliminate minerals letting you find more gold, with ease. Discrimination circuitry with instant pinpointing at your fingertips takes the awesome power of the Lobo SuperTRAQ into every type of metal detecting you do.

\$799⁰⁰

with 10" Elliptical Wide Scan coil

ABLO μ MAX AND LOBO SuperTRAQ

de scan that comes standard with these nting searchcoil. Other coil types perform s on tiny, shallow nuggets and in alkaline s give best results on large, deep

rimination, and more sensitivity to tiny ernalized soils. Wide scan searchcoils an hide gold from concentric coils. nting and a wider sweep for hunting tiny, coils offer added depth on larger nuggets.

Design Engineer's Report on the Lobo SuperTRAQ

Manual ground balancing is an important skill that some people pick up in minutes, yet many people find it awkward even after years of practice. Some detectors seem designed to make it difficult. Sometimes soil is so variable that it requires constantly fiddling with the ground balance knob—a nuisance, even if you're skilled at it.

Many detectorists have asked for automated ground balance systems to end the frustrations of manual ground balancing. Various manufacturers have developed different systems. Most work poorly. Some simply don't work at all. Some do a fair job, but still the tracking is easily thrown off by rocks and metal objects—depriving it of the repeatable response that is characteristic of a manually ground balanced machine.

Jack asked me to design an all new "gold machine" with lots of "hots" and a better ground tracking system (without drawbacks) to meet the demand. It also had to be dual-purpose like the original Tesoro Lobo. The project was Tesoro's greatest engineering effort to date. We named this new detector the Lobo SuperTRAQ.

The SuperTRAQ system uses an entirely new approach in automated ground balancing. The computerized circuitry tracks soil changes *accurately*. It resists mis-tracking on rocks and metal objects. It also recognizes and "jumps into" new ground conditions *almost instantly*. The discriminator is typical Tesoro—hot on small and low conductivity objects and relatively free of "chatter".

Independent field tests in the U.S. and Australia resulted in great reviews and made several converts to the Lobo SuperTRAQ. It may be some time before our competitors come up with something to match it.

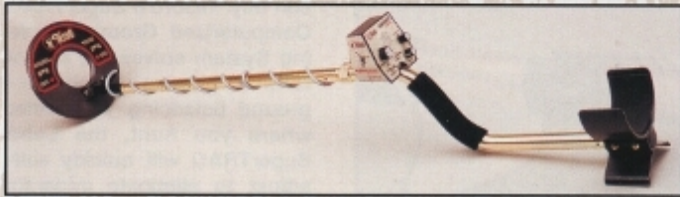

8 1/2" Round Wide Scan \$119

11" Round Wide Scan \$129

Cover (not shown) \$7.00

BANDIDO µMAX

The Bandido µMAX relic hunts, coinshoots, cache hunts and gold nugget prospects. All with power and performance that outshines detectors costing twice as much!

- MicroMAX Design
- VLF 12 kHz Frequency
- Silent Search
Discriminate Mode
- No-Motion All Metal Mode
- Auto or Manual Retune
- 3 3/4-Turn Ground Control
- MAXBoost Sensitivity
- Interchangeable Coils
- Lifetime Warranty

Exclusive MicroMAX design using state-of-the-art Thick-Film Hybrid Technology gives top-of-the-line power and performance without the hefty size or hefty price tag. The Bandido µMAX features Tesoro's proven High Gain Sensitivity Circuitry with new power enhancements. The result is greater depth and more sensitivity especially to smaller, low conductive targets such as fine gold jewelry and half dimes. The ground rejection circuitry is easily adjusted to give peak operation in all soil conditions.

\$439⁰⁰
with 8" Concentric coil

Sidewinder µMAX

The Sidewinder µMAX wins competition hunts! The MicroMAX design uses high-power circuitry, ultra-lightweight and simple fingertip controls to make your detecting fast, accurate and fun.

- MicroMAX Design
- VLF 12 kHz Frequency
- Silent Search
Discriminate Mode With
QuickCheck Pinpointing
- No-Motion All Metal Mode
- Built-in Mineral Rejection
- MAXBoost Sensitivity
- Interchangeable Coils
- Lifetime Warranty

This is the detector that started a revolution in competition hunting. Why? Because it finds treasure fast! The Sidewinder is so lightweight, easy to operate, and has such great performance that everyone who uses one just loves it! The No-Motion All Metal Mode has automatic threshold retune and instant fingertip retune. The Expanded Discrimination features QuickCheck push-button pinpointing for instant, accurate target locating. MAXBoost Sensitivity can add inches to your search depth.

\$399⁰⁰
with 8" Concentric coil

SILVER Sabre II

The Silver Sabre II has become a legend in metal detecting by holding the record for the most valuable find ever made with a metal detector, the Hoxne Treasure.

- Variable Threshold
- VLF 10 kHz Frequency
- Silent Search
Discriminate Mode
- No-Motion All Metal Mode
- Built-in Mineral Rejection
- Lightweight Design
- Body or Pole Mount
- Interchangeable Coils
- Lifetime Warranty

Hunt for coins, jewelry and relics with ease. The Silver Sabre II's combination of turn-on-and-go design, superior discrimination, top performance, easy-to-use controls, and affordable price has made it Tesoro's number one selling detector worldwide. Tesoro's famous Expanded Discrimination finds the targets at the low end of the spectrum that other VLF discriminators miss: small gold rings, fine gold jewelry and nickels. The Silver Sabre II's Monolithic Shielding reduces external interference.

\$329⁰⁰
with 8" Concentric coil

CUTLASS µMAX

- MicroMAX Design
- VLF 12 kHz Frequency
- Silent Search Discriminate Modes
- MAXBoost Sensitivity
- Built-in Mineral Rejection
- Ultra-lightweight Design
- 3-Piece Knockdown Pole
- Lifetime Warranty

Cutlass µMAX Searchcoil

Interchangeable 8" Concentric Searchcoil With Monolithic Shielding and 3' cable

The Cutlass µMAX is one low priced metal detector that experienced field testers have something to say about. "Wow!" "You have a winner with this one!" "The Cutlass MicroMAX is a hot detector!" "Tesoro, you have done it again!" Once you try one you'll see what they mean.

Like all MicroMAX detectors, the Cutlass µMAX doesn't just *feel* light. It *is* light. Ultralight! It is comfortable to hold and operate, even during longer searches. MicroMAX circuitry with MAXBoost Sensitivity gives the Cutlass µMAX the kind of performance and depth usually reserved for more expensive, heavy detectors. Two Silent Search modes give versatile operation. Two simple controls along with preset mineral rejection make it very easy to use. The single 9 volt battery makes it economical too.

with 8" Concentric coil

AMIGO II

The Amigo II is the friendly detector that brings fun to your family's outdoor activities. It can be operated effortlessly by every member of the family, even if they have never used a metal detector before. Simply put, the Amigo II is *fun for everyone.*

- Designed For All Ages
- VLF 10 kHz Frequency
- Attachable Speed Handle
- Silent Search All Metal and Discriminate Modes
- Single Knob Simplicity
- Built-in Mineral Rejection
- Ultra-lightweight Design
- Lifetime Warranty

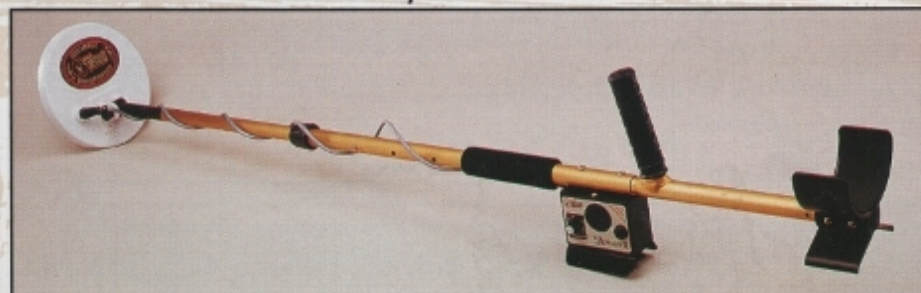

Can be used with or without "Speed Handle."

The Amigo II is so simple to operate that anyone can have fun with it. One control knob with easy-to-understand labels make this a true turn-on-and-go machine. The detector features a true All Metal mode. It is sensitive, has a fast recovery and features Discrimination that Tesoro is famous for. Compare the Amigo II to any detector in its class and you'll find the overall performance is outstanding. The unique pole and handle design accommodates all sizes and ages, even as young as 4!

Metal Detectors

LIFETIME WARRANTY

Tesoro Metal Detectors are manufactured in the U.S.A. by Tesoro Electronics, Inc. For over 15 years now, I have backed every new detector sold in the United States with our exclusive Lifetime Warranty. Nothing says more about a company's confidence in its product than its factory warranty. This is your greatest assurance of a quality built product.

Jack Gifford

4" find smallest targets at moderate depths.
fits 4" round

7" better target/trash separation
fits all 7" round

8" wading - extra weight for shallow water hunting - best all around size
fits all 8" round

10 1/2" more depth for larger targets and cache hunting
Fits all 10 1/2" round

scuff covers for wide scan coils are solid bottom

11" wide scan - more depth for larger targets and cache hunting

8 1/2" wide scan good for gold and relic hunting in heavy minerals

7" wide scan - good on small targets in heavy minerals

ROUND SEARCHCOILS

Coil Size	Concentric	Wide Scan	Scuff Cover
4"	\$ 89.00	-	\$ 6.00
7"	89.00	\$89.00	8.00
8"	99.00	-	8.00
8" wading	119.00	-	8.00
8 1/2"	-	89.00	8.00
10 1/2"	109.00	-	14.00
11"	-	99.00	14.00

SEARCHCOILS come in two types: concentric and wide scan. Concentric are preferred for discriminating. Wide Scan are less effected by ground mineralization. All searchcoils are electrostatically shielded and water proof. Coil types shown will work with most Tesoro models (except for underwater and gold prospecting machines.) See your dealer for cable length.
