

## WHAT IS C.P.R.?

The CORTES offers mineral-free discrimination by using Controlled Phase Response (patent pending), a proprietary technique developed by TESORO. CPR Discrimination is based on motion, but achieves its maximum depth at much slower sweep speeds than earlier motion detectors. CPR allows discrimination at depths beyond the reach of many detectors in the All Metal mode.

The CORTES also features NORMAL (All Metal VLF) and TR Discriminate modes. These three operating modes, plus TESORO's Push-Button Mode Change/Tuning System, allow the serious treasure hunter to obtain maximum performance in any foreseeable situation.

- DISCRIMINATION AT VLF DEPTH.
- PUSH-BUTTON MODE CHANGE/TUNING.
- THREE OPERATING MODES FOR ANY TH'ING SITUATION.  
Normal (All Metal), CPR Discriminate, TR Discriminate.
- SINGLE TURN CALIBRATED GROUND ADJUST.
- RUGGED, YET LIGHTWEIGHT (4½ LBS.).
- SENSITIVITY CONTROL ON TR DISCRIMINATE.
- SINGLE BATTERY PACK OPERATION.
- COMPATIBLE WITH ALL TESORO SEARCH COILS (8½" STANDARD).

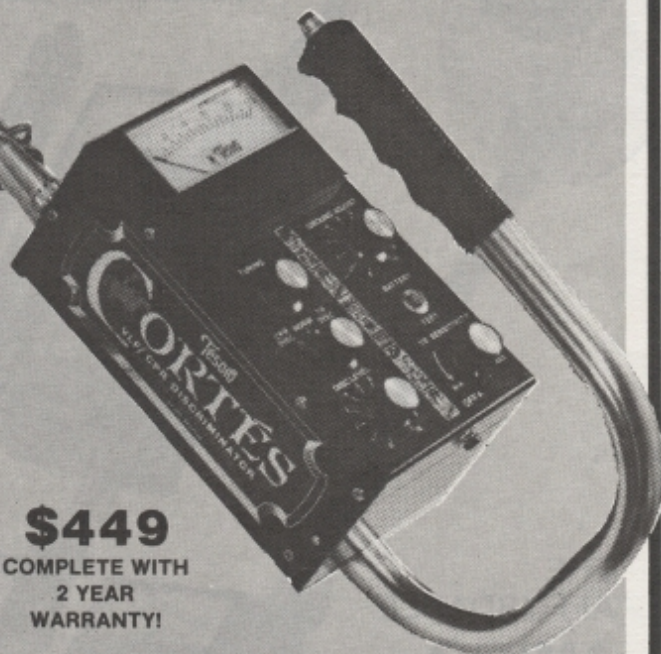

**B**eing an avid coin-shooter, I have used most of the successful metal detectors available for the past several years. In fact, I designed many of them still being sold by other companies, and I had you, the treasure hunter, in mind.

I designed the CORTES to satisfy my own desire for the best possible metal detector that today's technology could provide.

The CORTES is **my** detector, and I'm proud of it. I invite you to compare its performance to **your** detector. I think you will prefer the CORTES too.

These 2 NEW MODELS are bound to cause some raised eyebrows in TH'ing circles.

The CORTES utilizes CPR (pat. pending) a proprietary technique developed by TESORO to provide Mineral Free Discrimination, plus normal (VLF) and TR Discriminate modes with Push-Button mode change. The CORTES is the easiest to use motion detector yet.

The AMIGO offers Ground-Reject VLF and variable TR Discriminate levels, selected by one single turn control, a feature found on some units selling at twice its price. Push-Button Tuning, sensitivity control, and large meter with battery test are included.

Both units offer TESORO quality and reliability. We also offer four other models, competitively priced, and optional search coils from 4" to 11". I know that one of our TESORO models is just right for you.
