

❖ Just say "micromax." ❖

The new MicroMAX Cutlass is an ultra-light weight, compact detector that delivers the performance of a full size detector. Tesoro has eliminated the troublesome adjustments and complicated features that cause a loss of performance when not used properly. The result is an easy to operate, grab-it-and-go detector that's amazingly powerful and surprisingly inexpensive.

The MicroMAX Cutlass is a TR/VLF Discriminator type detector designed for mainly for coin hunting and all-purpose metal detecting. Because it is sensitive to all metals, it can also be used to find a variety of jewelry, gold, relics, artifacts and other metal objects.

At the heart of the MicroMAX Cutlass circuitry is a special Thickfilm Hybrid circuit board—developed from Surface Mount Technology—that incorporates Tesoro's proven High Gain Sensitivity Circuitry with *new power enhancements*. This powerful circuitry provides greater depth and more sensitivity, especially to smaller, less conductive targets such as fine gold jewelry and half dimes.

Even with its amazing power, the MicroMAX Cutlass is so simple to operate that anyone can get great results right away. There are only two control knobs mounted right at your fingertips. These two easily adjustable combination controls provide full spectrum VLF and Discriminate capabilities. The automatic ground rejection circuitry is preset to allow "mineral-free" operation in virtually any ground conditions you might encounter.

The MicroMAX Cutlass features two operating modes: All Metal and Discriminate. Both modes are Silent Search, so the searchcoil must be moving to detect a metal target. The motion required, however, is so slight that pinpointing a target is very easy.

The increased power of the MicroMAX circuitry overcomes the loss of depth (up to 35%) when operating in Discriminate mode that is typical on many VLF Discriminator type detectors. The MAXBoost Sensitivity feature allows the operator to add inches to search depth.

State-of-the-art technology and superior design permit the complex and powerful circuitry of the MicroMAX Cutlass to fit into a very small space resulting in a detector that's so light there is no need to body mount the control housing or to use cumbersome arm straps for stability. This *exclusive* design feature adds to the ease of use and makes those longer searches more enjoyable.

The MicroMAX Cutlass comes standard with an interchangeable 8" round, open center, concentric searchcoil for greater depth, more accurate pinpointing and best all-around use. A variety of optional searchcoils add to the versatility of this detector.

The MicroMAX Cutlass is perfect for hobby, sport and travel—especially for a beginner or occasional detectorist. It's a great tool for construction site and other ground cleanup. It also makes a great second or "backup" detector for any detectorist.

SPECIFICATIONS

Operating Frequency	12 kHz
Searchcoil Size	8 inch diameter
Searchcoil Type	Round, open center concentric
Searchcoil Cable Length	Approx. 3 foot
Audio Frequency	Approx. 760 Hz
Audio Output. ...	1½ inch speaker and headphone jack
Headphone Compatibility	¼ inch stereo plug
Weight	2.2 pounds (may vary slightly)
Battery Requirement	One 9 volt DC (alkaline)
Battery Life	10-20 hours (typical)
Optimum Temperature Range	30° F to 100° F
Optimum Humidity Range	0 to 75% R.H.
Operating Modes	Silent Search All Metal
.....	Silent Search Discriminate

μ MAX

Just say "micromax."

NEW

CUTLASS

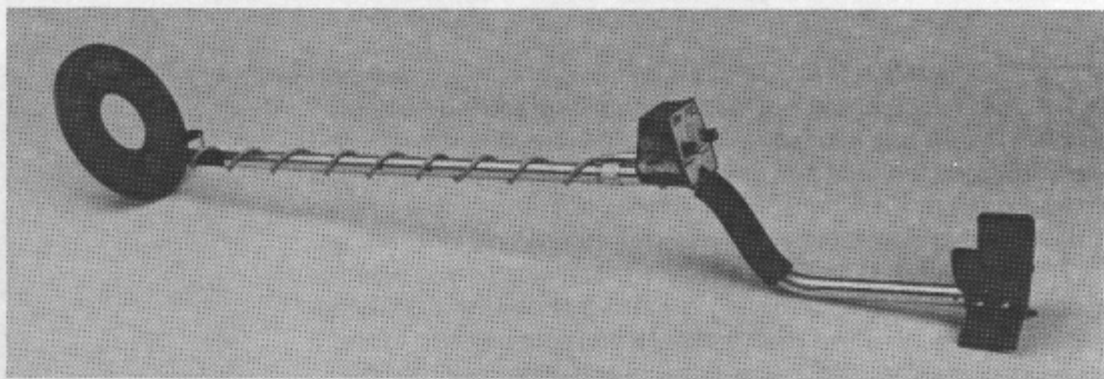

Micro in size. Performance to the MAX!

"Wow!"

"You have a winner
with this one!"

"The μ MAX Cutlass
is a hot detector!"

"Tesoro, you have
done it again!"

These are the comments made by detectorists who have seen and used the new μ MAX Cutlass from Tesoro Electronics, INC. From the first look you can tell this detector is something special.

Look at the size. It is amazingly small! All of the circuitry, controls, speaker and even the battery are located in a control housing that can fit in the palm of your hand.

Pick it up. Forget about detectors that "feel" light. This detector is light! *Ultra light!* At just over two pounds, the entire unit weighs in about the same as other detector's poles alone.

Put it on your arm and swing it. The feel is unbelievably comfortable! It rests naturally in your hand. Most of what little weight is there is in the searchcoil, giving you a feel of precise control without any muscle tensing weight that leads to arm and shoulder fatigue.

Experience the power and simplicity. Light weight and good feel aren't worth much without good performance. And performance is what the μ MAX Cutlass *really* delivers. The increased power of μ MAX circuitry delivers the kind of performance and depth found in the most expensive detectors. Two simple controls at your fingertips make operating this detector a breeze.

Drop your jaw at the price. The μ MAX Cutlass is not an "entry level" metal detector, it's just priced like one. At a suggested retail price of only \$279, this detector blows away everything else in its class.

◆ **Well designed.** ◆ **Quality built.** ◆ **Unbelievably priced!** ◆ **Lifetime Warranty.**

So, what do you say? Just say "micromax."
