

TESORO METAL DETECTORS MADE FOR THE UK

Laser Scout

The Scout is similar to the Rapier but without pinpoint mode and threshold control. The Scout comes with alkaline batteries and is fitted with an 8" polo coil. The Laser Scout is a simple switch on a go motion detector, simple in operation, high in performance. The Laser Scout is lightweight and easy to operate, as such it is ideal for both the newcomer to the hobby and the more experienced detectorist. Based on the original Silver Sabre circuitry the Scout continues the tradition delivering the goods on difficult sites.

LASER

Laser Rapier Plus

The Laser Rapier Plus is a very simple to operate motion discriminator detector, having discrimination, sensitivity and threshold control for tuning in all metal. It is lightweight and easy to use. Fitted with 9" x 8" web coil, the Rapier comes with alkaline batteries. The Laser Rapier Plus is lightweight and easy to operate, as such it is ideal for both the newcomer to the hobby and the more experienced detectorist.

LASER

LASER

Laser Trident 2

The Trident II runs at 14.3kHz frequency and comes as standard with a 9"x8" concentric monolithic coil. This machine has **fixed & adjustable** ground balance to help improve performance and will also use any of the Lobo, Cibola, Trident or Tejon coils. The Trident II comes with a flip switch which enables the user to adjust the frequency from 14.3kHz to 14.5kHz or 14.7kHz.

LASER

Laser Trident 1

The Trident I is designed for the treasure hunter who prefers simplicity when it comes to controls. The Trident runs at 14.3kHz frequency and is housed in the micro max control box. It comes as standard with a 9"x8" concentric monolithic coil and will also use any of the Lobo, Cibola, Vaquero or Tejon coils. The Trident I comes with a flip switch which enables the user to adjust the frequency from 14.3kHz to 14.5kHz or 14.7kHz.

LASER

Laser Hawkeye

The Hawkeye is the latest edition to the laser range. Based on a simplified Cortes, the Hawkeye has a digital target identification meter, full range of discrimination, depth reading and threshold control for the pinpoint mode. The Hawkeye is fitted with a 9" x 8" web coil and comes with alkaline batteries.

Tesoro Tejon

The Tejon is one of Tesoro's top detectors, it has a 17.5 kHz frequency which helps to increase the sensitivity on small gold and silver targets. The Tejon comes with a 9 x 8 web coil but the manual ground balance will allow other coils to be fitted. The Tejon has a pitch adjust so the tone can be adjusted and a dual discrimination control for accurate target id.

Tesoro Euro Sabre

The Euro Sabre - the first Tesoro model that was specifically designed to meet the needs of the European detector market. The Euro Sabre combines Tesoro technology, American know-how, and European good looks into a single detector. Previously, the Euro Sabre was only available on the "Continent", but for a limited time it's here in the United States. The Euro Sabre was designed to handle the number one problem in Europe - IRON.

The Euro Sabre uses a built-in Iron ID Mode that allows the user to customize how they would like to get rid of the trash targets. The Iron ID can be used in either a Blank or an Audio Mode. In the Blank Mode, most iron will be ignored and the machine may give a slight chirp or click over oddly shaped iron targets. In the Audio Mode, iron gives a low tone that is easily identified. Nonferrous targets give a high tone. Targets that are questionable are designated with a high/low rolling tone.

The Euro Sabre is designed as a general purpose or relic hunting machine. It incorporates a manually adjusted Ground Balance that operates in both the All Metal and Discriminate Modes and a 12x10 spoked coil to provide the power to reach deeper than average targets.

At home or abroad, the Euro Sabre is the one detector that can pick through the iron and deliver the treasure.

CMD Gold Wolf

One of the most sensitive metal detectors available today!

The awesome WOLFTRAX Gold Wolf metal detector

The Wolftrax Gold Wolf is the pinnacle of metal detection technology. No other detector gives you the fast, accurate and reliable ground tracking in normal and severe soils like the Golden Wolf. Two Metal detectors in one! - It excels on the trashiest roman & celtic sites or seeking out the tiniest nuggets in the gold fields

"The Gold Wolf is simply one of the most sensitive metal detectors you can buy" Gold Wolf's Computerized Ground Tracking System solves the detectorist's greatest problem-ground balancing. No matter where you hunt, the Gold Wolf will quickly self-adjust to eliminate minerals letting you find more gold with ease. Discrimination circuitry with instant pinpointing at your fingertips takes the awesome power of the Gold Wolf into every type of metal detecting you do.

The simple to use, high performance detector designed to cope with the most difficult sites. 17.8KHz frequency (for superb sensitivity), lightening fast recovery speed and 10 x 5" elliptical search head (the optimum size for those tiny gold & silver coins!) make an unbeatable combination. Designed by experts for the toughest sites and then coupled with Tesoro's build quality - the perfect combination! Wolftrax Gold Wolf was designed to meet demands of the serious detectorist who demands optimum performance on the toughest sites with the minimum of fuss. No fancy meters to interpret. Just switch on, quick ground balance and go. Detecting how it should be!
