

MAYAN

VLF/TR DISCRIMINATOR

THE RIGHT STUFF

The dictionary defines stuff as "the material out of which anything is to be made." We think that you will agree that the Mayan is made of THE RIGHT STUFF.

The Mayan's new super stable concentric coil makes pin-pointing a cinch, while offering improved discrimination. It's lightweight and comfortable arm rest handle allows anyone to enjoy hours of effortless use. Why should a hobby be hard work?

It's unique new one step ground adjust turns the old standard "up & down, trial & error" operation into a simple "tune it in the air, adjust it on the ground" procedure. It's stable discriminate level control doesn't affect the tuning, making classifying a target a snap. Why should tuning a detector be a frustrating experience?

The coin depth meter is in plain view when using the detector, so it is also an excellent pin-pointing aid. It's push button mode change is the easiest one handed operating system, and the recessed sloping panel puts the other controls where they are readily visible and accessible. Why should using a detector be difficult?

The Mayan offers ease of use, easy tuning, and a combination of features and performance unmatched by anything near it's price.

See your dealer today to learn the meaning of THE RIGHT STUFF.

with **LIFETIME WARRANTY**

- Coin depth indicator
- Automatic battery test
- One step, single turn ground adjust/tuning
- Push button mode change
- Manual or automatic tuning
- Ultra stable concentric search coil
- Extra rugged Tesoro construction, yet amazingly lightweight — (3¼ lbs).
