Quality ... It's our commitment.

Spectrum Design Engineer Mark Rowan field tests a prototype.

Customer Service Manager Steve Howard and Engineering Manager Bill Ford discuss the Spectrum with President Ken White.

Shirley Smith uses a magnifier to inspect circuit boards.

Wanda Arms and Dianna Bondesen assemble Silver EAGLE display pods.

A message from the President

For over thirty years, it has been our pleasure to give our customers the quality metal detectors they expect and deserve. Quality products begin with quality ideas, followed by first rate design and committed production people.

Customer satisfaction is everyone's job at Whites. Before the sale and after the sale, our #1 goal is a satisfied and happy customer.

Thank you for choosing Whites.

Kenneth R. White

Barb Rush silkscreens the new Classic I cases.

Receptionist Bettie Dixon is the friendly, helpful "voice of White's". (Bettie's been with White's for twenty five years.)

Customer Service's Alice Severns shows Purchasing's Jessie Erickson how to use the new Spectrum.

Sherrie Peden does a final inspection on a Silver EAGLE before it is packaged. Look for her stamp on the inside of the battery door on your detector! 

Your "Direct Connection"

We refuse to hire robots to answer the phone.

Doesn't it irritate you when you call an 800 number and you get someone who sounds like they've swallowed a recording? Or worse, someone who doesn't have a clue about what you're calling about - or what they're selling?

This is a big issue for us. If you don't feel good when you get off the phone after talking to White's, we might as well close our doors. That's why

you'll talk to warm, personable, creative folks who want to take the time to answer all of your questions.

In fact, the person who answers your phone call has been selected because they like treasure hunting, and enjoy talking to you about the adventure. It is their hobby. And their business.

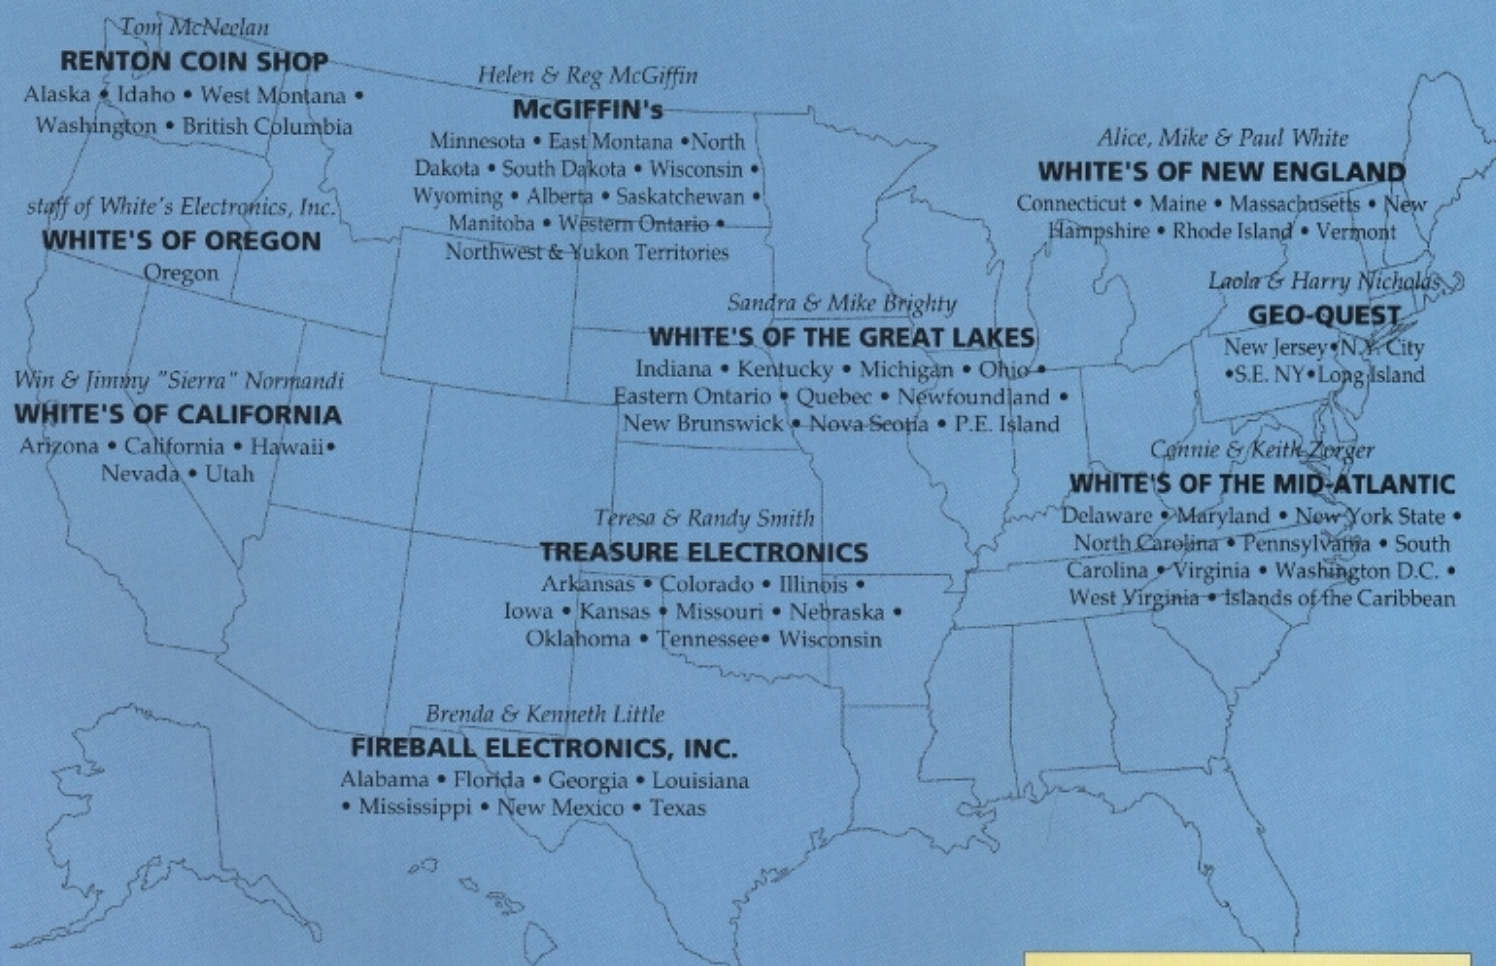

Furthermore, they have an organization of Authorized White's Deal-

ers who are just as motivated. Thanks to the magic of electronic switching by AT&T, your request will be routed to the distribution point nearest you.

We are proud to introduce you to the following people - our only Authorized White's Regional Distributors. We hope you like them as well as we do!

Regional Distributors

A NEW ERA OF METAL DETECTORS BEGINS

EAGLE® Spectrum

The ultimate in performance and simplicity. Beginner to Pro, you'll never outgrow this awesome detector!

```
MAIN MENU  P9.1/1
Preset Programs
Basic Adjustments
Pro Options
```

Spectrum opens up new possibilities as you're ready ...

Start with ...

4 Ready-to-Go! Starting Programs.
Plus two you create and store.

- Coin & Jewelry rejects most common trash and accepts coins and most jewelry.
- Jewelry/Beach eliminates nails but picks up jewelry.
- Relic accepts targets like buttons, minnie balls and shell casings but rejects small iron like square nails.
- Prospecting accepts all metals and features built-in autotuning.
- Custom 1 comes loaded with a Ring Enhancement program.
- Custom 2 has a Demo program.

Move on to ...

9 Basic Adjustments.
Even the novice can customize the Spectrum!

- Volume is adjustable to suit a wide range of hearing needs.
- Threshold can be fine tuned to your preference.
- Tone Adjust features 255 different pitches to choose from.
- Audio Disc selects all metals or discriminates out junk.
- Silent Search allows searching without a threshold tone.
- Mixed Mode Audio combines the best of all metal and discriminate modes.
- AC Motion Sensitivity selects the level of sensitivity in motion modes.
- DC Nonmotion Sensitivity selects the level of sensitivity in nonmotion and pinpointing modes.
- Backlight adjusts the display's brightness. Great for low light conditions.

The ultimate ...

More than 20 Pro Options.
Plainly visible and easy to adjust. "Engineer" your own detector, then save your changes!

PRO Options include Disc Editor, Tone I.D., Spectrum Responses, Frequency

Shifting, Transmit Power, and Preamp Gain. All easily accessible!

A "Signature" for every target!

As you sweep, Spectrum collects information and graphically displays it with a simple, easy-to-understand "signature".

NEW TARGET LABELS!

```
UDI: 85.3
(-) + - - + - 0 - - + - - + - (+)
quarter
```

You see a precise, compact reading to the right of zero on good targets.

```
UDI: -56.0
##### # #####
(-) + - - + - 0 - - + - - + - (+)
iron
```

It's easier than ever to I.D. iron. You see a scattered "smear".

Unequaled Depth

Try Spectrum in those spots that are heavily hunted - even with other "computerized" detectors. There are still coins there, and now you'll be able to recover them!

```
Depth:
#####
12 - - - 9 - - 7 - - 5 - - 3 - - 1 - 0
```

Read depth with a flip of the trigger. Bars fill for the most accurate pinpointing yet.

Luminescent Display

adjusts for optimum brightness. Keeps glowing even after the sun goes down

Digital Target Signature

produces an electronic fingerprint for each target

Activates your choice from the menus

Scroll through your choices with

Silver EAGLE®

The professional performance you expect from an EAGLE - now streamlined and simplified!

Digital EAGLE technology that's fun and affordable!

Possibly a large gold ring!

Start hunting right away ...

3 Ready-to-Go! Starting Programs.

- Coin & Jewelry accepts coins and most jewelry, rejects most pull tabs, screw caps and all iron including nails.
- Jewelry/Beach eliminates nails but picks up all jewelry. AutoTrac® keeps

the detector running smoothly in and out of the water.

- Prospecting/Relic accepts all metals and features built-in autotuning. Programmed for specific target separation and easier pinpointing.

"The Silver EAGLE is easy to operate, but it has lots of punch. It's so simple to use, I haven't even read the manual.

I especially like the pinpoint mode, it's always right on."

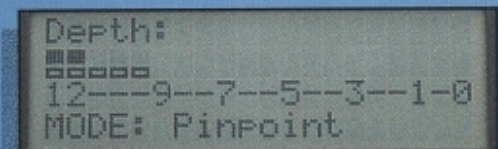

Connie Zorger

The essential options ...

6 Basic Adjustments.

- Volume is adjustable to suit a wide range of hearing needs.
- Threshold can be fine tuned to your preference.
- Sensitivity has 80 different settings for maximum depth.

- Audio Disc. selects all metals or discriminates out junk.
- Silent Search allows searching without a threshold tone.
- Viewing Angle adjusts the displays brightness and contrast.

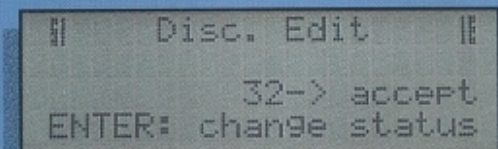

Display marks and fills for the most accurate pinpointing ever.

Create your own notch detector ...

Unlimited combinations with Disc. Editor.

Customize the Starting Programs for your hunting needs with Disc. Editor. Use hand in hand with the VDI reference chart on the top of the box to set Silver EAGLE to detect just the targets you're after. Choose from 190 numbers to accept or reject any combination of targets.

190 different accept/reject "notches". Unlimited discrimination possibilities!

Target Label

6000/Di PRO SL

Our traditional workhorse - it just keeps finding treasure!

Cleaner target signals
and improved performance in all grounds with Signal Balance control

Four hunting modes
give you both All metal and Discriminate modes - versatile enough for all hunting

Sample the ground while you hunt

AutoTrac® samples and electronically resets for maximum sensitivity and depth. Can be locked in, too

I.D. detected targets
on the meter - then pull the trigger and read depth

Alternate between hunting modes
or retune with the trigger switch

Silent Search or Audible Threshold

Eliminate false signals
with Hot Rock Rejection

Vary your discrimination
to suit your hunting needs. Set at ∇ P to ignore nails and other iron

\$599.95
sugg. ret.

If you want to hunt for it all - coins, jewelry, relics, gold nuggets - the PRO has that kind of flexibility. This powerful favorite continues to satisfy its owners in every situation - parks, beaches, battlefields, gold-fields. It's totally adjustable to suit virtually all your hunting needs, but with ∇ P settings on each control and instructions right on the box, it couldn't be easier.

Specs

Large Meter I.D.'s target and reads depth
PRESET ∇ P control settings
4 Modes: GEB/DISC, GEB/NORM, TR/DISC, GEB/S.A.T.
DISC control

SURFMASTER® II

On the beach or in the surf... salt or fresh water ... it's easy to find treasure.

Sandy ocean beaches where people vacation, your favorite childhood swimming hole on the river, that extra deep spot in the lake where the kids dive from the rock above each summer ... the Surfmaster is finding the coins, rings and other jewelry lost in places like these everyday.

White's trademark on-the-box easy instructions get you off and hunting right out of the box. In the water and on the beach, it couldn't be easier. Just set the controls to either the Ring Range  or the Coin Range  and listen for the distinctive sound of *treasure*.

Quick target-to-trash recovery
essential for those trashy beaches

Coin Range and Ring Range

on both the DISC and SENS controls. Set at the lower ring  to pick up small gold rings with less discrimination. Use the Coin Range  and detect most coins, but eliminate most junk

Waterproof to 30 feet
and tough enough to withstand years of sand and salt

Specs

Just two controls:

DISC control with PRESET  settings

SENS control with PRESET  settings

Box, search coil and headphones completely waterproof to 30 feet

Low Battery L.E.D. glows when batteries are low

9 1/2" AMPHIBIAN II search coil. Light and just 1/2" thick. Neutral buoyancy to slice through the water with ease

Power Supply: 3 9-Volt transistor batteries included for up to 30 hours of hunting

Box mounts two ways

Under the armpit, or as shown. Hipmounts too, for light-as-a-feather hunting

Rugged, waterproof headphones

Clear, precise target responses - even underwater. No wind noise

On-the-box instructions

You start finding treasure without looking at the instruction manual

PI 3000

High performance Pulse Induction detection -
at an unbeatable price.

Some of the world's most valuable and historic treasures have been recovered from the ocean's floors. Whether you're searching for sunken treasure from a historic shipwreck, to coins and jewelry lost in a summer's boat outing, you'll choose the PI 3000.

The PI tunes out ground minerals both on the beach and in the water while it detects all metals. With just one control, it's totally hassle free hunting.

If you're a scuba diver, take the PI 3000 along on your next dive. You never know what might surface!

Specs

One control. Turns detector on, tests batteries, and tunes

Pulse Induction Operation

AutoTrac® Tune/Operate mode

L.E.D. glows when targets are detected

Nylon hipmount pouch included

Power Supply: 9-Volt 6 Cell battery pack

Treasure from the Spanish fleet which sunk in the 1700's off the Florida coast. It was recovered by Ken White's divers aboard the salvage boat "Rainbow Chaser" using the PI 1000.

AutoTrac® TUNE/ OPERATE mode

Automatically compensates
for changes in ground
minerals as you hunt

Waterproof to 150 feet

Box mounts forward, back, up, down

You choose. Plus, it's easy
to hipmount - great for
those all-day hunts

Rugged, waterproof headphones

Clear, precise target responses -
even underwater. Completely
surrounds the ear. No wind noise

Pulse induction detection

The absolute best
for saltwater
conditions. Detects
all metals while
tuning out ground
minerals in both
salt and freshwater.

GOLDMASTER® II

Designed and now proven in the field by prospectors. Goes after even those tiny, hard to reach nuggets.

The GOLDMASTER is built for a single task - finding gold. We took the special needs of today's prospectors and engineered a detector like no other. With just the features they asked for - power, depth, sensitivity. In all kinds of soils. And a meter that I.D.'s iron targets.

The results? Even the Pro's are switching to the GOLDMASTER. And finding more nuggets, deeper nuggets, than with any other detector.

Dear White's,

I've never written to a manufacturer before, but because of a recent nugget hunting trip, I feel compelled to write.

I recently purchased a GoldMaster II and headed for the field for 2-1/2 weeks to play. The results of the trip? Eighty-six nuggets ranging from a very tiny 0.2 grain up to a 1.6 oz. beauty found on the last morning. So, "thank you!" for a terrific product and equally terrific service after the sale. Sign me a very satisfied customer.

Larry Sallee
Phoenix, Arizona

Detector Stand

doubles as hipmount bracket.
"D" rings for easy chest mounting

Box mounts in 2 rod positions

Forward as shown, or under the armpit.
Belt mounts as shown, too.

Rugged, all metal construction

Built for even the toughest conditions

Specs

The most precise ground balancing system ever. Coarse, intermediate and fine ground balance adjustments yield 40:1 resolution.

VCO "Fire Engine" Audio. Talks to you. Needle jumps and audio stutters on probable iron targets (when ground will allow).

Optimum Operating Frequency. 50 kHz to penetrate the most highly mineralized soil to find the tiniest nuggets.

S.A.T. Self-Adjusting Threshold maintains stable operation.

Elliptical LongScan Search Coil. Enables you to cover more ground with greater depth.

Power System: 8-Cell 12-Volt pack provides up to 30 hours of hunting.

Precision ground balance system

Coarse, Intermediate and Fine adjustments.
Gives 40:1 resolution

New operating mode

"X-GND SALT" for extreme
grounds and alkali salt conditions

Iron I.D. meter

Pegs on probable iron targets when
ground will allow. You decide
whether or not to dig

Self-adjusting threshold

S.A.T. keeps the detector stable even
when the ground minerals aren't

Audio overload alert

Built-in alarm warns if
Sensitivity is set too high

Too late for photo ...

New smaller
knobs! Easy to
adjust. "Friction
Brakes" stay
where you set
them.

Iron I.D. toggle

Can be left in All Metal and
switched or locked to I.D. iron

CLASSIC III

Super comfort. Super performance.

The Classic III is built to find coins and jewelry. Not nails and junk. It couldn't be easier ... just set the DISC and SENS controls at either the Coin Range or Ring Range setting depending on what you're after, and you're ready to go. And what comfort! Light and balanced so you can spend your whole day finding treasure.

Specs

Very-slow sweep. Quick recovery picks up coins and rings other detectors leave behind

DISC Control features two DISC ranges - Normal and Black Sand. Detects coins, gold, silver and jewelry even in high junk areas

SENS Control with ∇ setting, adjusts for maximum depth

Frequency Adjust Control avoids interference from other detectors

Trigger switches to All Metal Mode. Great for pinpointing, or lock in to search for relics and other iron objects

Silent Search. The only sound you'll hear is the detector responding to targets

Power Supply: 3 9-Volt transistor batteries included. Lasts up to 30 hours

L.E.D. Low Battery Alert

Interchangeable Search Coils: Accepts 4", 8", 10" and 15" loops

2 rod-mount positions

Forward as shown, or under the armcup - plus it's easy to beltmount

Eliminate interference

from other detectors. Frequency Adjust Control - for competition hunts or other crowded hunting spots

Ignores junk in all grounds

Two DISC PRESET's. Hunt beaches in Ring Range ∇ . Set at Coin Range ∇ in areas where mainly coins are found. Two ranges - Normal and Black Sand. Advanced operators can optionally adjust ground rejection for exact conditions

Maximize depth

with adjustable SENS control. ∇ position for easy operation

Powerful all-metal mode

Flip the trigger for instant pinpointing, or lock in to search for relics and other iron objects

All-Metal Mode, Frequency Adjustment, and interchangeable search coils make this detector a real value!

\$299.95
sugg. ret.

CLASSIC II

Easy to use. Affordable. And it ignores junk!

It's simple. It's reliable. Just set the DISC and SENS controls to either Ring Range or Coin Range ▽ and

start finding treasure. No complicated adjustments. It's set to ignore the soil's minerals, and the DISC controls lets you set the audio so you hear strong sounds on the coins and jewelry, and broken, ratty tones on the nails, foil and junk. You dig just the good stuff!

Mounts 2 ways

Forward as shown, or back under the armcup. Belt-mountable, too. 8' of cable included

Less trash, more treasure

Two DISC PRESET's. Hunt beaches in Ring Range ▽. Set at Coin Range ▽ in areas where mainly coins are found

Define your target

when you flip the trigger and go to "zero" discrimination. Great for pinpointing, too

Specs

DISC Control with two DISC Presets. Hunt beaches where rings and jewelry are found at the lower Ring Range. But if you're after coins, use the Coin Range ▽.

SENS Control adjust for maximum depth. ▽ position for easy operation.

Trigger Switch. Flip the trigger for "Zero" discrimination. Defines the target.

Built-in automatic ground exclusion. Set by the experts at White's - so you spend less time setting up and more time hunting.

Rapid Target Recovery allows you to hear more good targets, even right next to junk. A must for trashy areas.

Low Battery L.E.D. Alert

Power Supply: 3 "9" Volt transistor batteries included. Lasts up to 30 hours.

For the White's Dealer nearest you

1-800-547-6911

CLASSIC I

Our lowest priced detector ... yet it still ignores junk!

The Classic I is a true, "turn on and go" detector. It's the perfect choice for kids, as a backup detector, or anyone on a budget.

Parks, school yards, even your own backyard could yield valuable and interesting treasures.

Don't be fooled by the Classic I's low price and simplicity! It's got the performance *built-in*. Just set the single control to the Coin Range ▽ for hunting in areas where your primarily after coins and want to ignore most junk... or use the Ring Range ▽ in beach areas or areas where jewelry is likely to be found also. Just sweep the loop ... the Classic I does the rest!

Two DISC Presets

Ring Range ▽ for hunting beaches and most coin areas. Coin Range ▽ for digging less junk

Built-in automatic Ground Exclusion

2 rod mount positions
and it's easy to belt mount

Rapid Target Recovery

Hear more good targets, even mixed in with junk

Reports from the field ...

My number one hobby is metal detecting. I have been detecting with White's for nearly twelve years and I have never been disappointed with the performance or dependency.

In February 1991, I traded in my White's DB detector for the White's EAGLE II SL, and I have discovered that it is truly a remarkable detector. The Eagle II SL has rewarded me with over 500 coins, dating from 1898 to 1990, five rings, several medals, various tokens, a silver bracelet, a gold plated nugget pendant

Last May I had an unusual find. I was metal detecting an old cabin site that dates back to 1789. This was the first permanent settlement in the Town of Farmington which is located in Western New York State. The cabin itself no longer remains. It was built by Nathan Comstock and his two sons Otis and Darius: they came to Farmington from Adams, Massachusetts.

That day turned out to be very exciting. I was using my EAGLE II. In an area approximately 50' from the cabin, I found an 1808 1/2 cent, an 1821 large cent and an 1835 token coin from Walsh's General Store in Lansingburg, NY. When I was walking away from the cabin on what looked like it might have been the roadway to the main road, the Eagle indicated there was a coin at 8" deep. (When pinpointing the

and various other treasures. These items were found at some of my favorite places to hunt, such as old fairgrounds, ball parks, school grounds, old picnic areas and old abandoned homesteads.

Soon after I had gotten my Eagle II SL, a treasure hunting friend invited me to go to an old ball park dating back to the early 1900's. He informed me that it was a pretty well "worked out" area by himself and other detector enthusiasts. When we arrived, my friend noticed that the old seating bleachers had been moved from their original site and the grass had been mowed at their previous location. He took his "Brand X" detector over to the location where the bleachers had set for so many years. He soon gave up with no coins to show for his effort and informed me that there was just too much trash, such as bottle caps, foil, and pull tabs. This seemed like the perfect place for me to try out my new Eagle. I entered a user program that gives VDI readings only on good targets. As I searched the area, I soon had several clad coins, two mer-

object with the Eagle, it's amazing how it is always right on target.) I then proceeded to dig up the coin. What a find it was - a silver 1652 Pine Tree Sixpence New England Massachusetts Colony coin. This was the oldest single coin I have found on land in my 25 years of metal detecting.

cury dimes, four wheat pennies, and I received a reading in the 10¢ range on Eagle II SL at a 4" depth. I dug to 4 inches and pulled out a 1903 Barber dime in very fine condition. My friend said he wouldn't have believed it if he had not witnessed it with his own eyes. We both agreed that the Eagle II SL is truly a remarkable detector.

I feel that anyone can have successful treasure hunts if they research locations, follow up leads from local residents, ask permission from land owners, fill all holes dug and leave the location in the same condition or better condition than you found it.

Your White's detector will do the rest to make your search enjoyable, successful and rewarding.

I would like to say "thank you" to all of the people at White's for their hard work and dedication for making myself and so many people proud to own Whites metal detectors.

*Dennis D. Comer
Larned, Kansas*

What makes the coins so interesting is the fact that the Comstocks came from Adams, Massachusetts in 1789. This particular coin dates back to 1652 and makes one wonder who lost it and how did it come to travel all this way. All in all, it was a very exciting day.

Just a note to the people at White's. I have had, throughout the years, several White's metal detectors and have always been pleased with them. I am very impressed with the new Eagle II. You have outdone yourself and keep up the fine workmanship.

*Rudy van der Velden
Macedon, New York*

More reports from the field ...

I'm the proud new owner of a White's Eagle II SL, and it never ceases to amaze me at its ability to locate silver coins in seemingly worked out areas! It has given me new faith in public hunting areas. In addition, I'm picking up deep silver coins in trashy areas that I've hunted previously with my other detector without success.

On recent example is a school yard in a local town. The main area was absolutely desolate of coins, and when I worked my way to an out of the way corner, the junk signals were almost overwhelming. I switched to my U-2 program, which I have programmed for quick recovery, and proceeded to cover the area carefully. I started finding older what pennies at 5 - 6 inches, so things looked promising. My first silver find was a 1900 Barber dime at a full six inches. At 5 1/2 inches, I found a school medal for "Progress in Writing". Next was a miniature toy pistol, and some very old brass buttons. Before too long I had 2 Mercury dimes, 2 silver Roosevelt dimes, and numerous wheat pennies. One of the Mercury dimes was 7 1/2 inches deep, and still gave a strong signal. My Eagle cancelled out most of the bottle caps that plagued the area.

The enclosed picture was taken after a very successful hunt at a church picnic area. I found an 1895 Barber Quarter, a 1907 Canadian Quarter, a 1918 Liberty Standing Quarter, 4 Barber dimes, 3

Mercury dimes, 2 Buffalo nickels, 5 Indian head pennies, and 24 wheat cents. A later hunt there yielded 3 more Barber dimes, a Barber nickel, 2 Indian pennies and a few more wheat cents. I also found 2 deep Liberty Seated dimes at a local park that is constantly hounded by treasure hunters, and an 1874 shield nickel on a boulevard by a public school.

This treasure-hunting season is only half over, and I've already surpassed my previous years total silver finds. It would be an understatement to say I love my new Eagle II SL! The combination of beep, bar graph, VDI indicator, and depth reading is unbeatable - I don't know how I ever got along without them! I love the versatility of the user programs too. When I'm out hunting a public area, and people stop by to say "You won't find any coins - it's hunted to death", I can just smile a little secret smile and just keep on hunting! Thank you for making this superior metal detector!

*Janice Housman
Echo, Minnesota*

It was Feb. of 1991 that my first metal detector ever arrived during a snow storm. My brother and I were so anxious to use it, we went outside during the blizzard and found an old shotgun casing. We chipped it out of the frozen ground just where the detector said. It

was so cold we soon gave up outside and went inside to the dirt floor basement of my brother's old house and within a few feet got a VDI reading of 91 and a good strong signal and pinpointed the target at 5 1/2 inches down. I couldn't believe it when my detector, that I had owned for less than half an hour, was telling me there was a half dollar size coin at my feet. The rock hard dirt floor was useless trying to dig through with our butcher knife so my brother ran to the garage for a shovel and cut out a large block of earth and placed it to the side of the hole where the EAGLE told us to dig. I checked the block. No readings. I checked the hole. No readings. "What's the matter with that detector?" My brother said. So I swept the area around the hole. Bingo! A 91 VDI real strong and clear with a depth reading now of zero. On top of a small piece of dirt that had fallen from the large block of dirt. I moved my loop out from over the target and low and behold, there it was. Large and almost matching

the dirt color perfectly was our first coin find. My brother grabbed it and ran upstairs to rinse the dirt off to see what we had. It was an 1847 Large Cent.

Now only about four months and many happy hours of detecting later, I have recovered hundreds of coins and relics of all types and sizes including rings, small necklaces and lots of nickels in places where others have already detected repeatedly. I go places with my EAGLE that are useless with other detectors. If you think all the good places have already been cleaned out, think again. If there has never been an EAGLE on the sight, you're still in for some of the nicest finds out of reach of all the others before you.

The pictures are of my first coin and of my first token, a Civil War Reunion token dated 1888.

*Michael J. Patterson
Vienna, Ohio*

Some of the gold and platinum rings Dutch has found on Hawaii's coastline.

To visit Hawaii is one of the most beautiful and restful experiences of a lifetime. It doesn't matter which island you visit, each has its own uniqueness, beauty, and mystery. For those of us who have moved here from the harsher climate of the mainland, each day is like being reborn. My wife, Pam, and I are no exception to this rule and after visiting the beautiful island of Kauai nine years ago we decided this is where we wanted to spend the rest of our lives.

A promise we made before we moved to Kauai was that we would invest in an underwater metal detector. We heard

of the thousands of dollars of jewelry and other valuables being reported lost in the ocean each year by both residents and visitors. It stood to reason that an underwater detector would be the wise choice.

I have been an avid treasure hunter since the age of eight years old when I found my first buried treasure. I was digging a post hole on our farm in Texas and found a wire-clamped Mason Jar filled with silver dollars. Needless to say I was "bitten" hard by the treasure hunting bug. My first White's detector was a 66 TR I bought in 1978, and I have been sold on White's detectors ever since. It was for this reason that we chose the White's PI 2000 underwater detector to launch our hobby in Hawaii. The results were immediate.

One of the most rewarding aspects of the treasure hunting hobby is finding an item that has been lost for a long time and being able to return it to the rightful owner. This has happened quite frequently to us since our move to Kauai. We have been able to return more than \$23,000 in lost jewelry over the past year.

For us, treasure hunting is a recreational hobby and being able to find and return a lost item is just one of the thrills and pleasures. Treasure hunting gets you out into the fresh air and sunshine, gives your body a good aerobic work-

out, and after the initial purchase price of the detector, doesn't cost you much more than a little bit of your time. So, I hope those of you who have been on the edge of buying your first detector will go ahead and do so because it is one of the best investments we have ever made.

Tides out ... gotta go!

Dutch Medford
Hanapepe, Hawaii

Dutch recently found and returned Franklin Roosevelt's family crest ring to his grandson, Del Roosevelt. Needless to say, this heirloom was priceless to his family!

Dutch found this diamond wedding set with a PI 2000 after more than 30 years in the water according to a gemologist. It now graces Dutch's wife Pam's finger. Appraised value: \$7,000.

I'm just writing to say how much I have enjoyed coinshooting with my 5900/PRO Series detector.

In the past 3 years since I bought the 5900, I have found many interesting coins and other valuables. Some of my better finds include:

- 1758 Spanish Reale
- late 1700's Half Cent
- Shield nickel (no date)
- 1917 Walking Liberty Half
- Barber Half, Quarter and 3 dimes
- 1847 Large Cent
- 1 Civil War button
- Many other early 1900's coins

My finds may not have much monetary value but to me they have much historic value. You have a great line of metal detectors for all kinds of hunting. I know I'm very impressed with mine. Keep up the good work!

James A. Davis
Brookville, Pennsylvania

How to hunt ... Where to hunt ...

Choosing A Detector

Two factors are important to consider when deciding on which metal detector to use.

1. Are you an experienced detector user, or a novice?
2. What type of hunting will you be doing?

White's has a detector for every skill level - whether it's your first time detecting or you're a seasoned pro. And there's a detector for every type of hunting, too. While some detectors, like EAGLE Spectrum, are versatile enough for most types of hunting, the GOLDMASTER is designed specifically with electronic prospecting in mind.

It might also be important to choose a detector that will discriminate out junk. If you're hunting a park or trashy beach, a detector that will allow you to ignore iron trash and bottle caps will eliminate a lot of unnecessary digging. An Authorized White's Dealer will be able to tailor a detector, and the necessary accessories, for your particular hunting needs.

Coin Hunting

Did you know it is estimated that more coins have been lost than are in circulation today? "Coinshooting" starts as close as your own backyard. Every place where people congregate, or have congregated in the past could be a treasure trove.

Folks of all ages enjoy metal detecting's light exercise. And the fun of never knowing what might be uncovered. With White's ever-improving high performance detectors, even those spots well worked by other detectors could yield valuable coins.

PRO's TIP: Research. Research. Research! There is no substitute. You may be surprised to find that there may be historic places to hunt right around the corner!

Some spots to try:

- Parks & school yards
- Old houses
- Amusement parks, carnival or fair grounds
- Football or baseball fields
- Bleacher areas
- Drive-in theaters
- Old stagecoach stops
- Under large trees
- Old churches & schools
- Racetracks
- Swimming/beach areas
- Old train stations

Recommended detectors: EAGLE Spectrum, Silver EAGLE, 6000/DI PRO, 4900 DL, CLASSIC III, CLASSIC II, CLASSIC I, SURFMASTER II.

Recommended accessories: BLUE MAX 600 6 1/2" loop, PRO or Spectrum headphones, coin probe.

Beach Hunting

It's a fact. People love the water. Every day, people trek to water to work and play. And every day, valuable coins, rings and other jewelry are lost by those people. The sand and surf of the ocean's beaches, lakes

and rivers hold some of the most valuable treasures to be found.

Take advantage of beach hunting's ever-replenished wealth. The gold necklace you recover today may not have been there yesterday!

PRO's TIP: Watch tides and changing water levels. The shifting sands may expose treasures that were not detectable before. While the lighter sand will wash away, the heavier objects will be left behind.

Some spots to try:

- Coastal beaches
- Lake and riverbank swimming areas
- Diving spots
- Dams

Recommended detectors: Submersible search coil and rod only: EAGLE Spectrum, Silver EAGLE, 6000/DI PRO, 4900 DL, CLASSIC III, CLASSIC II, CLASSIC I. Totally submersible: SURFMASTER II, PI 3000.

Recommended accessories: Steel or Plastic sand scoop, H20h! book, loop stabilizer.

Electronic Prospecting

The lust and magic of the quest for gold is woven into the history of our great country. It is in our blood.

Modern day electronic prospectors use specialized, extremely sensitive detectors to recover nuggets of all sizes.

Search in known gold-bearing areas, or old mines.

Become an expert on the responses your detector gives on various targets (bullets, nails, hot rocks, and gold). Because discriminating out any junk might also eliminate some gold, you'll want to dig every target.

PRO's TIP: Learn to ground balance your detector well. Gold is generally found in extremely mineralized soil, which can prove to be quite a challenge to the novice prospector.

Finally, enlist the help of a more experienced prospector. There's a strong fellowship among prospectors. You'll probably get some valuable pointers.

Recommended detectors: GOLD-MASTER II, EAGLE Spectrum, Silver EAGLE, 6000/Di PRO, 4900/DL.

Recommended accessories: Elliptical loop cover, PRO or Spectrum headphones, BLUE MAX 600 loop, gold pan, Finding Gold Nuggets book.

Relic Hunting

If you are intrigued by the past, your metal detector opens a unique window into history. Imagine finding a Confederate soldier's shirt buttons, or belt buckle. Then a smattering of minnie balls puts you right there at the heart of the battle.

Or piece together a bit about your own history when you uncover a plow harness from your family's homestead. These "collectibles" might be priceless to you!

Relic hunting requires research. Pin

down the specific location as well as possible before hunting. With the proper information, you may be able to "recreate" what occurred.

PRO's tip: Dig everything. There is really no way of knowing what is junk and what is valuable until you see it.

Recommended detectors: EAGLE Spectrum, Silver EAGLE, 6000Di PRO, 4900 DL, CLASSIC III, CLASSIC II, CLASSIC I.

Recommended accessories: PRO or Spectrum headphones.

Underwater Hunting

Whether it's shallow water hunting or wreck diving, some of the world's most valuable treasures have come from underwater.

Surf diving is especially effective when used in conjunction with beach hunting. What may be a populated sandy beach one year may be totally submerged the next.

PRO's TIP: Don't set your discrimination too high. There is less trash in the water, and you may sacrifice some rings if you try to eliminate trash other than iron.

Treasure salvage diving has uncovered sunken treasures that are beyond belief. White's PI 3000 is used in conjunction with electronic locating equipment by some of the most famous recovery teams in the world. White's President, Ken White, has recovered some of the fortunes of the Spanish fleet which sunk off the Florida coast in the 1700's.

Recommended detectors: SURF-MASTER II, PI 3000.

Recommended accessories: Steel or plastic sand scoop, diver rod kit, H2oh! book.

Caches

Who doesn't dream of finding a jar of hundred year old coins? And who hasn't heard stories about "Uncle Fred" who didn't trust banks, and buried all his money out behind the barn!

It was common practice in earlier days to bury your valuables. And how many of those treasure troves were never uncovered for one reason or another?

PRO's TIP: Always search old fence rows. Many valuable caches have been uncovered in old post holes.

And remember - large, deep targets require large search coils.

Recommended detectors: TM 800, EAGLE Spectrum, Silver EAGLE, 6000/Di PRO, 4900 DL.

Recommended accessories: 15" search coil, PRO headphones.

ACCESSORIES

SEARCHCOILS

15" Loop - S2, 3, PRO, CLSC	\$99.95

- Transistor Rechargeable Kit 8.95
- Nicad & Charger-x3 for CL & SM
- 4.8 V Nicad Charger (SL & DL Models) 14.95
- 4.8 V Auto Charger 24.95
- 4.8 V Nicad Battery 34.95
- 12 V 8-Cell Penlight Holder 1.95
- 9 V 6-Cell Penlight Holder 1.95
- "C" Cell Holder (SL & DL Models) 7.95

Information on other White's detectors?

TM 800 Automatic

Detects large caches of metal like metal chests from 5 - 20 feet deep. Simple to use. Industrial applications ... hazardous waste drums, underground storage tanks, water meters, sprinkler heads.

PCL 500

Pipe and cable locator and tracer. For industrial applications. Tracer box energizes pipes and cables for easy tracing and marking.
