MAKING DREAMS COME TRUE

A Letter from the CEO

For the past 35 years, my Dad and I have had the pleasure of producing and providing treasure hunting instruments to some of the most interesting people in the world ... our customers.

Over the years, many of you have stopped by to show us the interesting treasures you have found. It is great to see the front counter covered with gold nuggets found with our new Goldmaster II. Or view a retired couple's finds after just one season's travels down the east coast with the Surfmaster II - tray after tray of sparkling rings and other jewelry. There's nothing more satisfying than seeing firsthand that our instruments

have performed as well as we said they would.

I have been fortunate enough to have found, with our PI 1000, some of the Spanish treasure ... lost for over 300 years. Now *that* is an adventure I will always remember ... but no more than the thrill of being friends, and associated with the many others that have also enjoyed the thrill of the hunt as well as the success of the great sport of treasure hunting.

Our metal detectors have come a long way since those days. Instruments that perform are the result of hard work, attention to detail, and most important, listening to the needs and wants of our customers. We have watched a lot of dreams come true in the past 35 years. We hope you enjoy our 1991 Adventure Guide to Metal Detecting. We will be watching for you to stop by and show us the results of *your* adventure!

Sincerely,

Kenneth R. White

I have hunted all across the U.S. from Oregon to South Carolina, and found all kinds of treasures in every state with my EAGLE. Civil war relics, jewelry, old and new coins. But my greatest treasure was found not far from my home in Oregon, at an old stagecoach stop. After hunting all day, and finding lots of shotgun shells and musket balls, I was heading back to the car when I got another reading that I thought was a shotgun shell. My days hunting finally paid off as I dug up an 1846 \$5 Gold Piece!

Larry Soper
Roseburg, Oregon

After purchasing the Classic II, I headed to Vicksburg, Mississippi to give it a try. While going over an area that I had searched before, I received a real loud, strong signal. After I pinpointed the location, I dug about 3 inches and recovered my target. I found it to be a Union breast plate in pretty good condition for being about 128 years old. When I get another free weekend, I will be right back in the hills of Vicksburg to search for more Civil War relics. This was the first Civil War relic that I have found. Thank you, White's.

Frank C. Schneider, Jr.
D'Iberville, Mississippi

The long wait for a strictly gold detector was worth it. The Goldmaster has reopened old, worked out spots and is super easy to operate. So far, we are averaging about 3 to 4 DWT a day.

Jim Williams & Harvey Bowers
Rancho Cordova, California

White's Direct Connection

WE REFUSE TO HIRE ROBOTS TO ANSWER THE PHONE.

Doesn't it irritate you when you call an 800 number and you get someone who sounds like they've swallowed a recording? Or even worse, someone who doesn't have a clue to what you're calling about - or what they're selling?

This is a big issue for us. If you don't feel good when you get off the phone after talking to White's, we might as well close our doors. That's why you'll talk to warm, personable, creative folks who want to take the time to answer all of your questions.

In fact, the person who answers our phone call has been selected because they like treasure hunting, and enjoy taking to you about the adventure. It is their hobby. And their business. Furthermore, they have an organization of Authorized White's Dealers who are just as motivated. Thanks to the magic of electronic switching by AT&T, your request will be routed to the distribution point nearest you. We are proud to introduce you to the following people - our only AUTHORIZED WHITE'S REGIONAL DISTRIBUTORS. We hope you like them as well as we do!

CLASSIC III QuickLook

The Classic III is built to find coins and jewelry. Not nails and junk. Nothing fancy here, just the basics you need. It couldn't be easier. Just set the DISC and SENS controls at either the Coin Range or Ring Range setting depending on what you're after, and you're ready to go. And what comfort. It's light and balanced so you can spend the whole day finding treasure.

Very-slow Sweep. Picks up coins and rings the other detectors leave behind.

Two DISC ranges - Normal and Black Sand. Detects coins, gold, silver and jewelry even in black sand or high junk areas. Outstanding performance in a full range of soil conditions.

Two DISC Presets ∇ ^P. When you're hunting beaches or areas where rings and other jewelry are found, set DISC at the lower Preset Ring Range. But if you're just after coins, use the Coin Preset.

Powerful All Metal Mode. Great for pinpointing, or lock in to search for relics and other iron objects.

Frequency Adjust Control. Avoids interference from other detectors. Great for competition hunts, or other crowded hunting spots.

Silent Search. The only sound you hear is the detector responding to targets.

Automatic, yet still adjustable. The best of both worlds. Set at ∇ ^P and treasure hunting was never easier. But the controls you need are here - and fully adjustable.

Two "S" Rod Mounting Positions. Forward as shown, or back under the armcup, plus belt-mountable. 8' of cable included.

Interchangeable Loops. Accepts 4", 8", 10" and 15" loops.

Power Supply: 3 "9" Volt transistor batteries included - last up to 30 hours.

CLASSIC II QuickLook

It's simple. It's reliable. Just set the DISC and SENS controls to either Ring Range ▽ or Coin Range ▽ and start finding treasure. No complicated adjustments. It's set to ignore the soil's minerals, and the DISC control lets you set the audio so you hear strong sounds on the coins and jewelry, broken, ratty tones on the nails, foil, and junk. You dig just the good stuff!

Two DISC PRESET's ▽. You dig less trash, more treasure. Hunt beaches where rings and jewelry are found at the lower Ring Range. But if you're after coins, use the Coin Range ▽.

SENS Control. PRESET position for easy setting. Adjustable for maximizing depth.

Trigger Switch. Flip the trigger and go to "Zero" Discrimination. Defines the target and helps with pinpointing, too.

Built-in automatic Ground Exclusion. Set by the experts at White's so you spend less time setting up and more time hunting.

Rapid Target Recovery allows you to hear more good targets, even right next to a junk target. A must for trashy areas.

Two "S" rod mounting positions. Plus belt mountable.

GOLDMASTER® II QuickLook

This detector is built for a single task - finding gold. We took the special needs of today's prospectors and engineered a detector like no other. With just the features they asked for - power, depth, sensitivity. In all kinds of soils. And a meter that I.D.'s iron targets.

The results? Even the Pro's are switching to the GOLDMASTER. And finding *more* nuggets, *deeper* nuggets, than with any other detector.

Precision Ground Balance System. Coarse, Intermediate and Fine adjustments. Gives 40:1 resolution. A Goldmaster exclusive! The Pro's love it, and everybody finds more gold.

VCO "Fire Engine" Audio. "Talks" to you. Easy to learn language "zips" on the gold, "boings" on hot rocks, and "stutters" for iron targets.

Optimum Operating Frequency. 50 Khz to penetrate the most highly mineralized soil to find the tiniest nuggets.

Iron I.D. Meter. Pegs on probable iron targets so you decide whether or not to dig.

S.A.T. Self-adjusting threshold keeps the detector stable even when the ground minerals aren't.

Elliptical LongScan Search Coil. The elliptical shape enables you to cover more ground with greater depth.

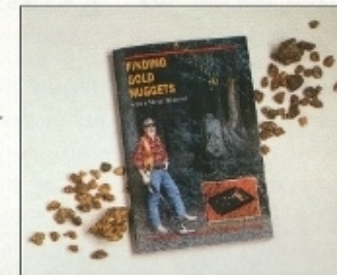

"Found a small nugget first day out!"

**Thomas L. Monaco

"Finding Gold Nuggets with a Metal Detector"

by Jimmy "Sierra" Normandi.
Written in Jimmy's own conversational style. Everything from choosing your equipment, to where to find gold. Come along as Jimmy recreates some of his most memorable trips. \$7.95

Note: In extreme ground, Iron I.D. meters and audio systems may not be totally reliable, thus the Pro's dig every signal.

SURFMASTER® II QuickLook

Sandy ocean beaches where people vacation, your favorite childhood swimming hole on the river, that extra deep spot in the lake where the kids dive from the rock above each summer ... The Surfmaster is finding the coins, rings and other jewelry lost in places like these everyday. We knew we had a winner, but even the staff here at White's are impressed with what's being found with this detector. And proud of the stories we hear from the field.

White's trademark on-the-box easy operating instructions get you off and hunting right out of the box. In the water and on the beach, it couldn't be easier. Just set the controls to either the Ring Range  or the Coin Range  and listen for the distinctive sound of *treasure*.

Hunt on land or in the water. Equally at home hunting dry land, saltwater beaches, freshwater lakes and stream beds.

Easy to use! Detects gold and silver rings, other jewelry, coins. Just two controls- set at  and you're ready to find treasure.

Quick target to trash recovery. Hear those good targets even mixed right in with junk. Just barely sweep the loop; detect and pinpoint with accuracy. Thanks to precision discrimination, the pesky nails just click a bit, but tiny rings are loud and clear. Hunting in trashy areas is rewarding again.

Completely waterproof down to 30 feet. And tough enough to withstand years of sand and salt.

9 1/2 inch AMPHIBIAN search coil. Light, and just 1/2" thick. Neutral buoyancy. Slices through the water with ease.

Heavy Duty Waterproof Headphones. At no extra cost. Clear, precise target response-even underwater. Completely surrounds the ear. No wind noise.

Low Battery L.E.D. Glows when batteries are low. 3 "9" Volt transistor batteries included for up to 30 hours of detecting.

Snap-mounts in two comfortable rod positions. Hipmounts too for light-as-a-feather hunting.

H2Oh! A Field Guide to Water Hunting by Mike Brighty. Success tips from a veteran water hunter. Mike covers it all... where to hunt, recovery methods, equipment. \$5.95

easy option to hipmount
where it's practically
weightless. And
everything's included.**

PI 3000 QuickLook

Some of the world's most valuable and historic treasures have been recovered from the ocean's floors. Whether you're searching for sunken treasure from a historic shipwreck, to coins and jewelry lost in a summer's boating outing, you'll choose the PI 3000.

The PI tunes out ground minerals both on the beach and in the water while it detects all metals. With just one control, it's totally hassle free hunting.

If you're a scuba diver, take the PI 3000 along on your next dive. You never know what might surface!

Pulse Induction. Detects all metals while tuning out ground minerals in both salt and freshwater.

AutoTrac® TUNE/OPERATE Mode. Acts as self-adjusting threshold-automatically compensating for changes in ground minerals as you hunt. Great for pinpointing too.

LED. Glows brightly when targets are detected for high visibility even in murky water.

Single Control. Turns detector on, tests batteries, tunes to ignore salt and mineralization. Automatically maintains threshold and ground balance over changing ground conditions.

Heavy Duty Waterproof Headphones. At no extra cost. Clear, precise target response-even underwater. Completely surrounds the ear. No wind noise.

Convenient Battery Pack included. Optional rechargeable battery system available.

Nylon Hipmount Pouch included.

High performance Pulse Induction at hundreds less than the competition!

The best for beach and water.

The PRO's

EAGLE® II SL

6000/DI PRO SL QuickLook

If you want to hunt for it all - coins, jewelry, relics, and gold nuggets - the PRO has that kind of flexibility. This is a powerful favorite that continues to satisfy its owners in every situation - parks, beaches, battlefields, goldfields. It's totally adjustable to suit virtually all your hunting needs, but with ∇ settings on every control, you can find treasure right away.

AutoTrac®. Samples the ground minerals as you hunt and electronically resets for maximum depth and sensitivity. Or lock in a specific ground setting for special situations with Auto GEB.

Hot Rock Rejection. Eliminates false signals.

Four Hunting Modes: GEB/DISC (rejects junk and adjusts to detect coins, jewelry, gold), GEB/NORM (detects all metals), TR/DISC (non-motion mode) and GEB/S.A.T. (Self-Adjusting Threshold keeps detector stable over varying grounds).

PRESET ∇ . Easy operation control settings and Quick Look on-the-box instructions.

Meter I.D.'s detected target and then reads out its depth when you flip the trigger. Trigger also alternates between hunting modes, and retunes so you're ready to hunt again once you've detected a target.

Signal Balance Control. Gives cleaner target signals and improved performance in all grounds.

Rechargeable Nicad Battery System included at no extra charge.

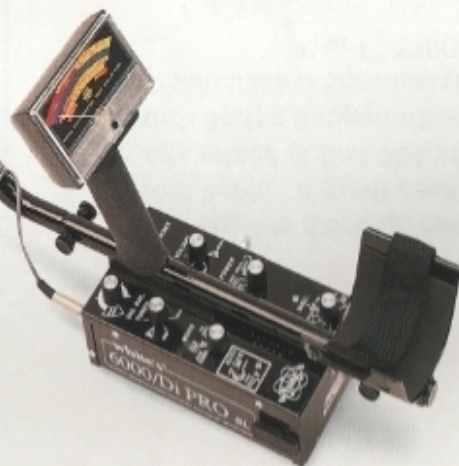

Blue Max® 950 9 1/2" loop. White's most powerful loop is standard equipment. Provides superior depth. (BLUE MAX 600 6" loop optional for trashy areas.)

Why does White's sell so many PRO's?
It's a traditional workhorse that's kept pace with today's technology.

Hate instruction manuals?

The PRO's have instructions on the bottom of the box!

\$699.95

"Lady Luck Strikes Again"

by Dick Tichian

Two years ago, Leon Aponte had the good fortune of finding a small mason jar of 130 coins in a park in Old Philadelphia, with his 6000/DI PRO. Recently, Leon noticed an old abandoned mansion in New Jersey and we grabbed our "PRO's" and decided to try it out. After searching for an hour or so and tiring of digging up modern "junk" coins, we heard Leon shout with excitement. He had found a gold cuff link with the initials "FC". We continued searching until we heard Leon shout again that he had found the other cuff link. We ran over to check it out ourselves when Leon indicated there was more in the hole. He carefully kept digging, and when all was said and done he had dug eleven inches and uncovered six of the most sought after finds. Gold coins! An 1861 \$2 1/2 gold piece and an 1892 \$5 gold piece, two 1888 Double Eagles, an 1891 and 1898 Double Eagle - four \$20 gold pieces. The 1891 Double Eagle was one of only 1,440 made that year!

5900/Di PRO SL QuickLook

The proof of this detector is in the amount of treasure it has rewarded its owners with over the years. It's a winning combination of features. A meter that works in conjunction with the audio to I.D. your target, and then tells you how deep to dig. Four hunting modes cover the whole range of hunting situations - prospecting for gold, hunting relics at an old homestead, or coins in the park. And with ∇ settings on each control and instructions right on the box, it couldn't be easier.

Meter I.D.'s detected target and then reads out its depth when you flip the trigger. Trigger also alternates between hunting modes, and retunes so you're ready to hunt again once you've detected a target.

10-Turn High Resolution Ground Balance. Precise tuning you need for prospecting.

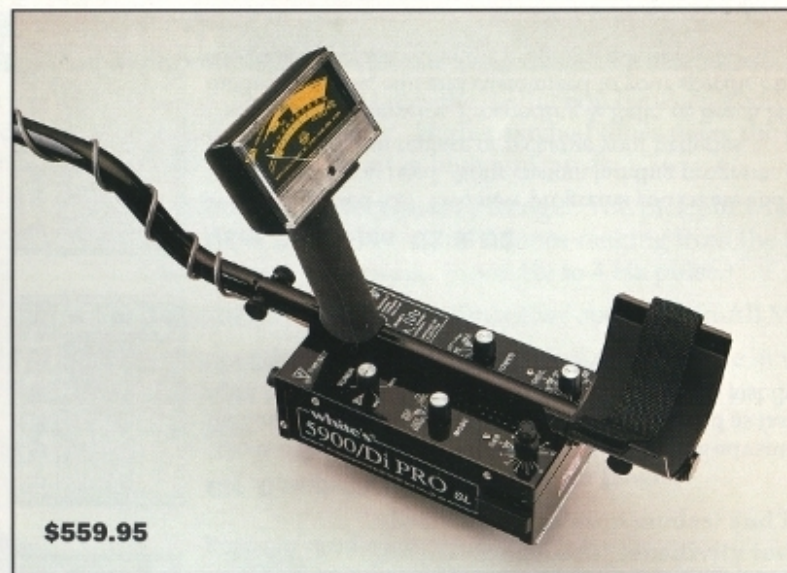

Signal Balance Control. Cleaner signals in all ground conditions.

S.A.T. (Self-Adjusting threshold) keeps detector stable even when the ground minerals aren't.

Four Hunting Modes for detecting all metals or discriminating - in all soils.

Blue Max® 950 9 1/2" loop. White's most powerful loop is standard equipment. Provides superior depth. (BLUE MAX 600 6" loop optional for trashy areas.)

Drop-in-C-cell battery pack included. (Rechargeable Nicad Pack available.)

"I am a Civil War relic hunter - found over 10,000 items since 1977. All with White's detectors."

*D. Cleve Smith
New Market, Tennessee*

4900/DL QuickLook

Whether you're after coins or gold nuggets, the 49'er has the full range of adjustability you need to hunt from California's highly mineralized soil to Florida's sandy beaches.

Hunt in the DISC mode, and you dig coins but not nails. Or hunt in All Metal - a must when you're going for the gold or relics.

Built for extreme soil conditions. Full depth plus the ability to cancel extreme ground mineralization in All Metal or DISC.

Sensitivity Control. Maximizes depth. Adjustable to allow you to run the 49'er as "HOT" as possible.

10-Turn Double Stacked Tuner. Precise tuning and more control in extreme grounds. Double Stacked Tuner for fine tuning while ground balancing.

Null Bands on GEB & DISC controls.

PRESET ∇ control settings for right out of the box hunting.

S.A.T. keeps the detector stable even when the ground minerals aren't.

Drop-in C-cell battery pack included.

All-around treasure finders.

Absolutely the best.

The PRO's

EAGLE® II SL

EAGLE® II SL QuickLook

The minute you pick up the EAGLE you notice how different it is from other metal detectors. The absence of knobs, and the presence of the touchpads and Liquid Crystal Display. Those touchpads bring the EAGLE's microprocessor to life, guiding you through your search for the treasure beneath your feet - coins, jewelry, relics, and gold nuggets.

If you're one of those folks who never reads the instruction manual before you use anything ... take heart, there's a short, very simple set of start up instructions right on the top of the EAGLE's box. If you want just a little more information, just turn the box over. (Don't worry, there's a detailed instruction manual included too!)

The key word for this detector is expandable.

Your first few times out, you'll be able to hunt right away just by pushing three pads. Ground balance your EAGLE to ignore the soil's minerals in two simple steps, pick a PRESET hunting program - either Coin & Jewelry, Prospecting & Relic, or Beach Hunting, and that's it. You're off and hunting. Just sweep the loop, and watch the display, and listen for the strong beep of a "good" target. EAGLE even tells you how deep it is!

As you become more experienced with your EAGLE, a world of options are opened up to you. Virtually everything's adjustable for your specific needs. You can create your own hunting programs and store them, or adjust your audio so the beep is higher or lower. And *that's* just the beginning.

"Found a 1943S Mercury Dime in my yard within 5 minutes of first use."

Jack Richardson
Marysville, Ohio

"I have paid for my EAGLE II SL several times over and with the tremendous improvements built into the new EAGLE, I am looking forward to many new "finds" this spring."

Paul E. Carpenter
Denver, Pennsylvania

"Thank you for a fine detector. Am I happy with my EAGLE? No, I am exuberant with it".

Dan McLeod
Valdosta, Georgia

For a White's dealer near you,

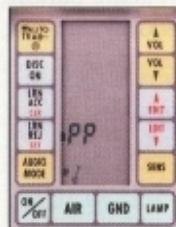

1-800-547-6911

Easy-to-use "Ready to Go!" Programs

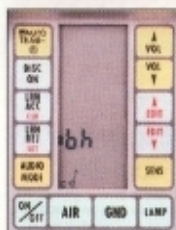

CJ Coin & Jewelry

Detects most small, medium and large rings, bracelets, locket, gold and silver coins. Doesn't pick up the most common pulltabs, screwcaps and all iron objects including nails. Complete display readings include target I.D. and depth. Auto. Ground Balance and AutoTrac® adjust to ground minerals as you sweep. Comfortable medium motion sweep speed.

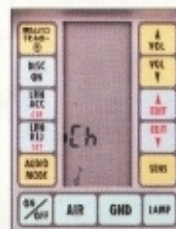

PP Prospecting & Relic

Programmed for specific target separation and easier pinpointing. The option of temporary or permanent manual ground balance in those extreme soil conditions. Professional prospectors demand Zero "0" discrimination. All metal targets are detected loud and clear with DOUBLE the intensity. Visually separates the iron trash and Hot Rocks to increase the probability of identifying gold.

BH Beach Hunting

Sand and salt are no problem! Just push a pad and your EAGLE sets up automatically for the conditions found on saltwater and freshwater beaches. In and out of the water, AutoTrac® keeps your detector humming while you dig up coins and jewelry. Coin I.D. and depth read out on the display. You won't hear those common iron targets, just the rings and other jewelry, and gold and silver coins.

CH Competition Hunting

"On-the-fly" frequency adjustment gives you the advantage in the competitive hunts. Change as many times and as fast as you want to avoid interference - while you hunt. With just the push of a pad! Choose from seven frequencies.

User Programs U1 & U2

What you asked for! Two new programs you create and store to use any time you need. Your custom hunting programs remain stored even if you replace or recharge your batteries.

Use the Coin & Jewelry, Prospecting & Relic, or Beach Hunting modes as a base; edit and customized to your specific hunting situation. Replace with new programs anytime.

Customize these features to "personalize" your EAGLE

Unlimited "notches" to accept or reject. Choose from 192 different accept/reject settings for the ultimate in "notch" discrimination. Block out rejected targets, so the display reads out only good targets.

Don't let L.C.D.'s and pushpads fool you.
EAGLE's value is inside the box!

"My Soldier"

by Brenda Little

When the White's EAGLE II SL arrived, I couldn't wait to take it to a "watering hole" in West Texas which we had been to many times in the past (and so had many others). We had found many Civil War relics there and knew that the Butterfield Stage had made this a regular stop on its way to San Diego. Also, the wagon trails crossing the parched west Texas desert had camped here to rest and water the livestock and prepare for the remainder of the journey. And I found real treasure. A silver star, approximately one and one-fourth inches high. Vol. Aug. 2 Nd, 1863, for his fidelity to the union". The back was inscribed "J. Luckadoe, enlisted Dec. 20, 1866, Co. D, 40th Inftry, re-enlisted Feb. 8, 1870, Co. B, 25th U. S. Infy".

I immediately set out to see if I could get more information and possibly even find a descendant to whom I could present this valuable treasure. I sent inquiries to the National Archives and got back notices that they did indeed have a copy of Joseph Luckadoe's civil war service and in addition to that they had his pension records.

\$849.95

Target Tone I.D. Makes the distinction between good targets and trash better than ever. Higher pitched tones make the good targets jump out at you even in high junk areas.

Expanded Audio Frequency Range. You pick out what you hear best - from 100 different audio tones ranging from the highest treble to the lowest bass. (1,648 Hz to 4 Hz pulse.)

Adjustable Speed S.A.T. Smoother operation in All Metal modes.

3 levels of Bottlecap Reject. Optimal performance in varied grounds.

Adjustable sweep speed and target response.

ON/OFF VDI coin labels.

Separate AC (motion modes) and DC (nonmotion modes) sensitivity levels.

Two Search Speeds. Normal for most conditions, fast for trashy areas or competition treasure hunts.

Signal Balance Control. Adjusts the incoming signals upfront before they are processed for a cleaner signal even in highly mineralized soil.

Two Transmit Power Settings. Works with the Signal Balance control for perfect tuning.

Rechargeable Nicad Battery System included at no extra cost.

After sending the required fees to the National Archives, the package finally arrived and I had the awaited information about "my soldier". I found that he was born Feb. 29, 1848 in Richmond, Virginia and he married Harriet Bufin on October 4, 1884 in New York City. This meant he had enlisted at the outbreak of the Civil War at the age of 15 and one-half. He was a waiter by trade and was 5'5" tall, had black hair, brown eyes, and a yellow complexion. There was an affidavit attached stating that he was sober when he enlisted.

The records say that Harriet preceded him in death and they had no children. Joseph was pensioned at the rate of \$24.00 per month on the 27th day of March 1895. He died in 1928 in the Pacific Branch of the National Home for Disabled Volunteer Soldiers in California.

We found several hundred items that had been missed by previous "detectors" and several coins, including a Half-Dime, an Indianhead Penny, and several Dimes, all dated 1851 to 1887. The best is knowing that we can go back again and again and still find more with the Whites EAGLE.

Absolutely the best.
