

## Catalog of Metal Detectors

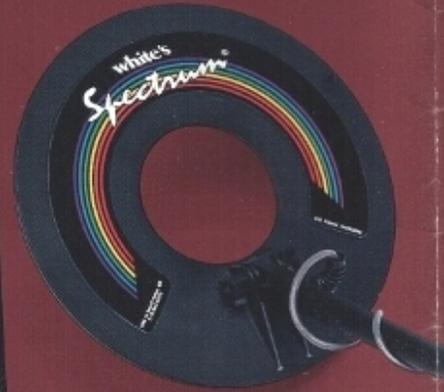

Ed Fedory tests the  
new Spectrum XLT  
along New York's  
Hudson River.  
*Story on page 4.*

Equipped with  
*SignalGraph*  
"What's in the Ground  
is on the Screen."

White's President Ken White and Authorized Distributors at the kickoff meeting for Spectrum XLT. (Front row, left to right): Mike White, White's of New England; Keith Zorger, White's of Mid-Atlantic; Jim Normandi, White's of California; Doug Machamer, White's of Mid-Atlantic; John Collins, White's of the Southeast. (Back row, left to right): Mike Brighty, White's of the Great Lakes; Randy Smith, Treasure Electronics; Reg McGiffin, White's of the Mid-West; Tom McNeelan, Renton Coin; Harry Nicholas, Geo-quest. Not pictured: Jan White of White's of Oregon

**TRIGGER PINPOINTING**

Activates target depth screen, & the circuit that concentrates the signal for precise pinpointing

*"We set a very high standard for our new XLT. Improving performance is always our top priority. It had to be even better than the Spectrum."*

*"After using the new Spectrum XLT in the field, I'm proud to put my name on it."*

**Ken White, President**

**The White's Team**

Designing a new detector is a team approach at White's, and the inspiration for our new Spectrum XLT started at the very top. The XLT is the result of Ken White's years of experience with metal detectors, as an avid outdoorsman and treasure salvor. Ken brought together his top-notch Engineering, Marketing, and Distribution team to design the XLT for you, the user. The results? A top-of-the-line detector that is easier to read, simpler to use and lighter, with better discrimination, and more information about the target.

Everything here at White's is a partnership. From answering your phone call to designing a new detector - it's a team approach. It begins with you, our valued customer, extends through our network of Authorized White's Dealers, on to 10 Regional Distributors, and finally to the folks at the factory in Sweet Home, Oregon. Like spokes in a wheel - every one is vitally important.

Our commitment to serving you begins with your phone call to White's. A single toll-free call links you with a dedicated, knowledgeable person, who usually is a metal detector user. Through the magic of electronic switching, regardless of where you're located, you'll get the Direct Connection line for your area. They can put you in touch with a dealer in your area in moments - with your single phone call. White's Authorized Local Dealer has the detectors you need, and the training and experience to get you started. Person to person local service!

Whether you're inquiring about a particular model, need an instruction manual, or tips on where to hunt in your area, you need only call one number. The professionals on the line are dedicated to helping you find the best detector for your needs, and making sure you know how to use it in the field.

## A HOST OF PERFORMANCE ENHANCEMENTS AND FEATURES DESIGNED WITH YOU IN MIND ...

"Don't change it just to make it different. Change it to make it better." Our customers talked, we listened, and we set our course to move from Spectrum to XLT.

"Yes, it needs to be smaller and lighter, but performance comes first." We knew we couldn't compromise. Our goal of XLT at 4 pounds wouldn't mean a thing if the end result couldn't stack up to Spectrum. So we built on the Spectrum's standard - adding a Coin Preset Program, more custom programs, and a multitude of adjustments that enhance depth and sensitivity.

"I want numbers that I can see while I sweep. And I don't want to have to use my glasses." We made the VDI numbers BIG, then partnered them with an icon "picture" of the target, SignaGraph®, and the best audio discrimination system on the market.

"I hunt in the rain. I need a detector that's as moisture resistant as possible." XLT's all-new display is "tenon-groove gasketed" for superior water resistance. And the case is a common sense, wrap-over design built for all-weather hunting.

"Give me the ability to view my entire hunting program *and* all its settings with ease." Now it's yours. With the push of a single pad, scroll through Preset or Custom programs to review your settings.

"Above all, it has to work as good or better than the Spectrum I have now." Were we able to do all this? You wouldn't be reading this if we hadn't. See Spectrum XLT for yourself ...

### AUTOMATIC GROUND BALANCE WITH AUTOTRAC®

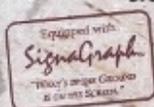

True balance that corrects for changing ground while you hunt

### TARGET ICONS

Visual probable target ID graphics for coins, jewelry, nails, foil and other junk

### SIGNAGRAPH®

Produces an electronic fingerprint for each target

### SLIDE-IN NICAD BATTERY SYSTEM

- 12 Volt Nicad pack with proven, trouble-free "point & pad" connections. 30% more battery life & quick charge, too

### WATER-RESISTANT POD, & WRAP-OVER CASE

Pod & display tenon-groove gasketed for all-weather hunting. High tensile strength aluminum case for rugged durability

### "TRUE GRAPHICS" LUMINESCENT DISPLAY NOW 50% LARGER

High definition display. Big, bold graphics and VDI numbers readout with twice the resolution

### 5 PRESET TURN-ON-AND-GO! PROGRAMS, PLUS 4 CUSTOM PROGRAMS

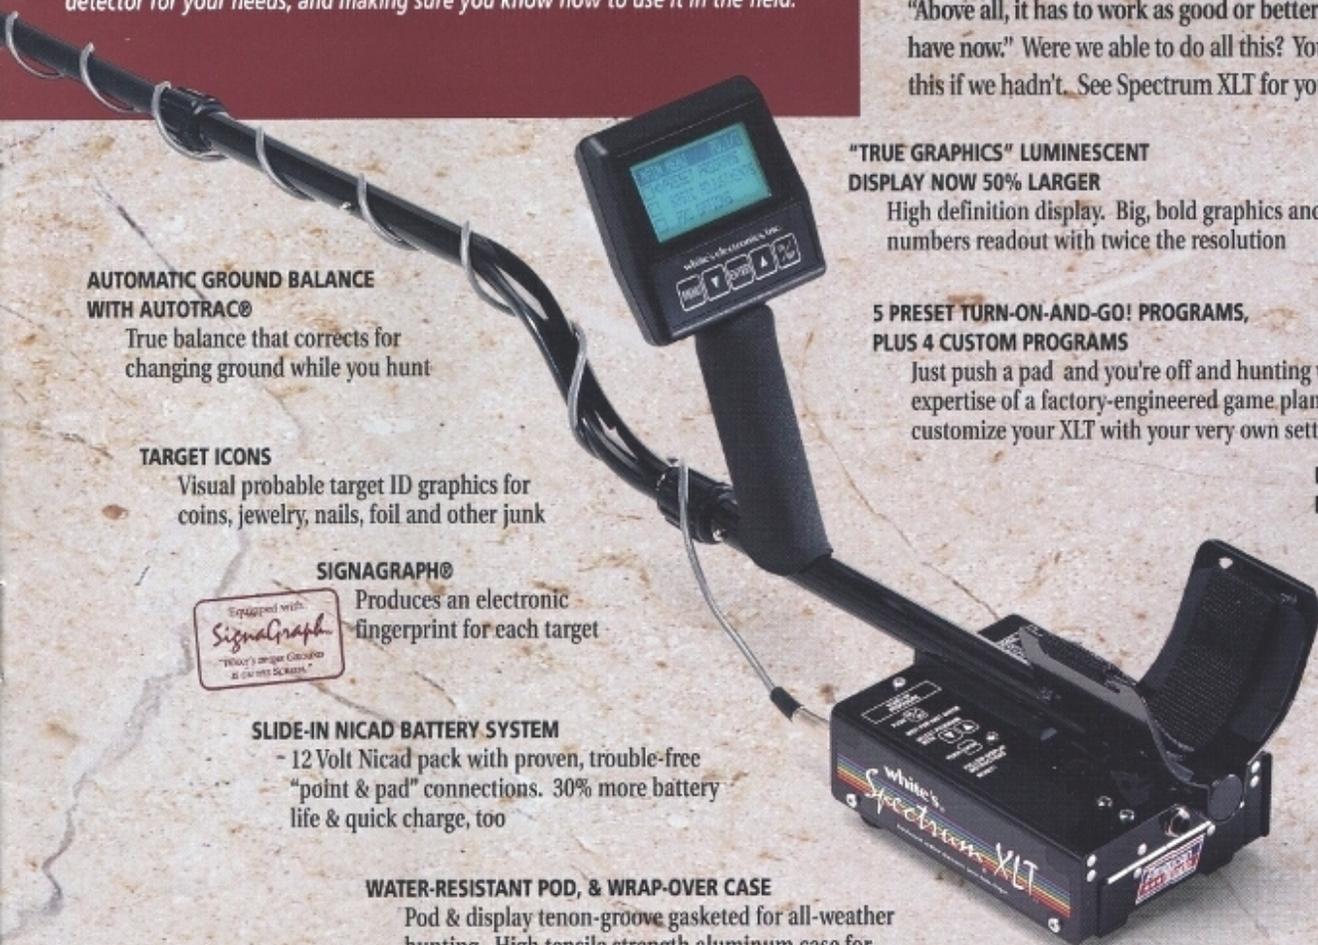

Just push a pad and you're off and hunting with the expertise of a factory-engineered game plan - or customize your XLT with your very own settings

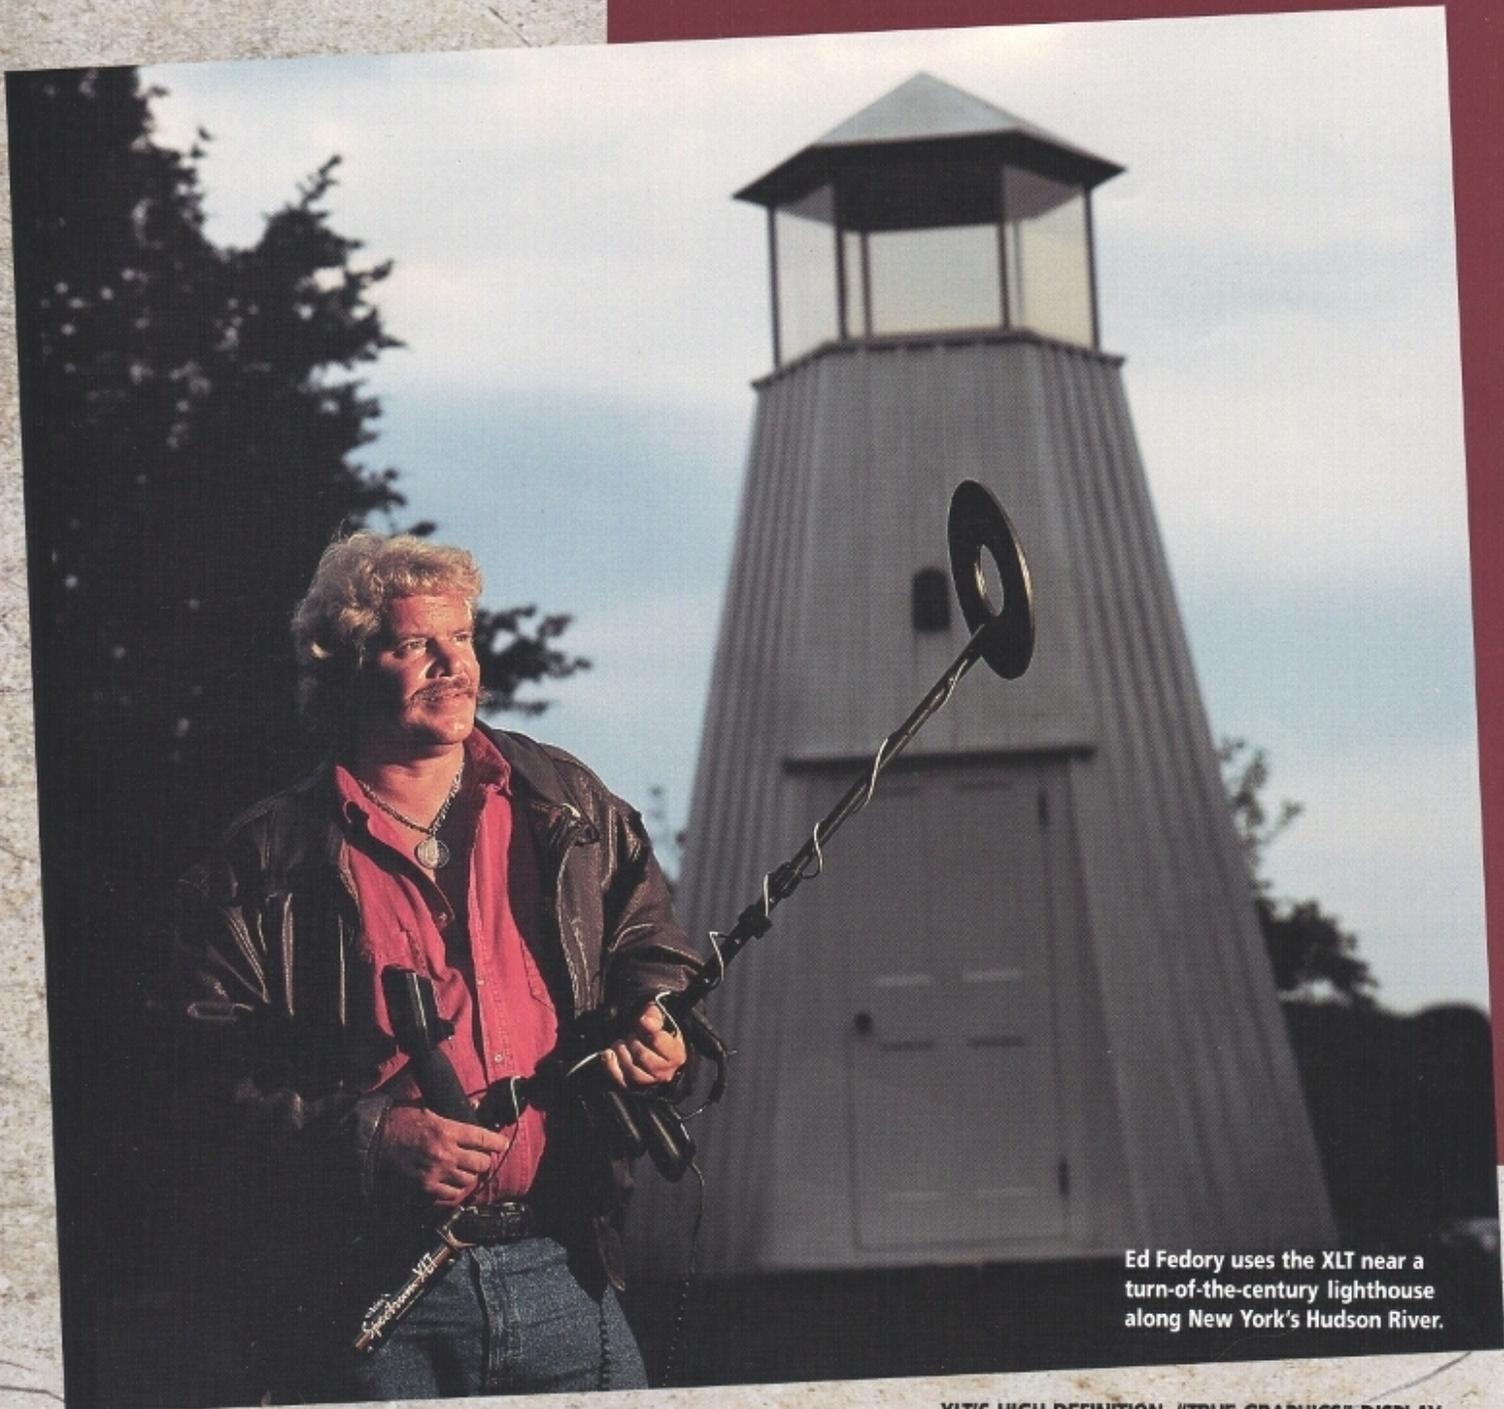

### LIGHTWEIGHT, ERGONOMIC DESIGN

Weighs in at just 4 lbs. Center of gravity is now behind the electronics for comfortable all day hunting

\$899.95  
sugg. ret.

For a White's dealer near you call  
**1-800-547-6911**

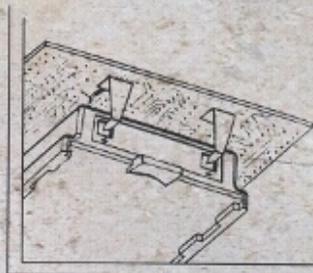

Ed Fedory uses the XLT near a turn-of-the-century lighthouse along New York's Hudson River.

#### ALL-NEW BATTERY DESIGN

Now with 41% more power to drive your high performance XLT. White's tried-and-true drop-in battery system featuring our exclusive "point & pad" connections is now even better!

- Easy access, slide-in 12 volt Nicad and penlight systems
- Charges in just 4 hours
- Increases hunting time by 30%
- Overnight & quick charger, backup "AA" holder included

#### XLT'S HIGH DEFINITION, "TRUE GRAPHICS" DISPLAY NOW WITH EVEN LARGER "TARGET SIGNATURE". A WHITE'S TECHNOLOGICAL ACCOMPLISHMENT!

Since the early '80's, White's VDI (Visual Discrimination) detectors have been able to give the user accurate information about targets in the ground. VDI was accomplished by using three channels from the loop referred to here at White's as X, Y and G, to produce an audio response as well as a single-dimension visual message for the user. Spectrum's SignaGraph® uses these same three channels, but produces a *multi-dimensional* image that has proven very useful in the field.

Using the G channel in conjunction with X & Y, Spectrum displays a *dynamic, target signature* allowing for detailed, *pattern recognition*. This new information, along with the new *icon* and proven VDI number, gives the user the most target information technologically available.

The benefit to you? More precision, higher resolution, *dead-on target recognition* you won't find on any other detector!

Want to know more? Call 1-800-547-6911 for the Spectrum® XLT™ Engineering Guide.

**Spectrum® XLT™**

Some of Ed's best coins ... including 3 Spanish pieces of eight and a King George copper.

Ed Fedory considers "digging history" a vital aspect of his life. "Being able to walk in the footprints of those who sacrificed their energies, and often their lives, to form this great country is just one of the passions which drives this relic hunter".

For nearly two decades, Ed has been following the trail of our forefathers with his metal detector to discover hidden encampments and lost battle sites in the forests and fields of upstate New York. During that time, Ed has used a variety of metal detectors. "I like the advantage of staying on the cutting edge of electronic advances. That's why I use the Spectrum XLT. It's a rugged, lightweight powerhouse that offers me the raw

depth I need and the information capabilities I demand. After countless hours of research in libraries and archives, after traveling hours to reach a suspected historical site, after being brush-scratched and bug-bitten, I just won't settle for anything less in the field!"

When Ed isn't following the relic trail, he's teaching history, and writing about his relic hunting adventures. Being able to illustrate and illuminate some of his history lessons with relics recovered from the field gives his students a "hands-on" experience that can't be duplicated in textbooks. "Rolling a cannonball along the floor of the classroom, or passing around musketballs fired in defense of our country certainly stimulates young, inquisitive minds."

As for his writing, Ed says, "Writing is more of a compulsion than a hobby. I could live without a lot of things, but writing isn't one of them". (Ed is the author of 'Relic Hunter, the Book', a 1994 book combining metal detecting technique with his unique storytelling ability.)

Ed has made many significant finds over the years - colonial coins, cannonballs, thousands of musketballs, early gun parts, bayonets, Brown Bess gunlocks, regimental buttons ... As for his best find of all, it has to be the 5 Spanish pieces of eight from the 1750's buried along with 4 smaller pieces of Spanish silver. Ed spins a tale of a soldier running for cover, musketballs whizzing through the air, when his money pouch snags on some brush. The bag of coins falls free, soon to be covered with autumn leaves and lost - almost forever ...

## STRAIGHT TALK FROM XLT USERS ABOUT DESIGN & PERFORMANCE

"We've been waiting for this. The XLT actually outperforms even the Spectrum, and it's so light. The first time out, I found 39 coins in an hour and a half."

Ed Milota, Search & Recover Enterprises  
Ventura, California

"When I opened the box, I was impressed with the size of the XLT. After I tried it, I loved the new weight and balance. It's just as easy to use as the Spectrum, and the target icons are a great addition to the best discriminator on the market."

Jerry Barbee, Barbee Detector Sales  
Burlington, North Carolina

"The XLT is a remarkable detector. I never thought I'd see anything exceed the Spectrum. I'm especially impressed with the lightness. The faster recovery really helps pick out coins in trashy areas. The XLT is like a super-fast race car - lapping everything else on the track."

Duane Croom, Barb's Metal Detector Sales  
Sullivan, Missouri

### ACCESSORIES

Blue Max® 350, 600, 800 & 1500 loops,  
Spectrum headphones. Call 1-800-547-6911  
for a Free Accessory Catalog.

## BIGGER, BOLDER GRAPHICS, NEW SCREENS AND ICONS, PLUS WHITE'S EXCLUSIVE SIGNAGRAPH®:

"I want the ability to scroll through the entire menu with the push of a pad." With Ken White's own words in mind, we kept what worked well, and made improvements from there...

There are more choices than ever before. A new Coins Preset Program, plus, now 4 Custom programs you create, store, and name.

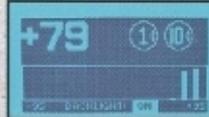

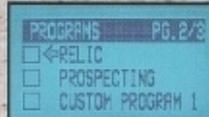

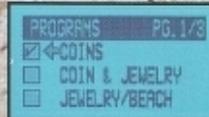

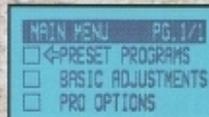

It's easier than ever to make adjustments, too. Basic and Pro Options work in the same straightforward way. Adjust target volume, for example, from low to high with the arrow keys, while you listen to the different levels. On/off adjustments like Audio Disc are even easier. Sweep and watch the display without missing a beat. The target VDI numbers and icons are BIG! SignaGraph's bar graph now has even more key information about whether to dig or not.

Pinpointing is more precise and easier than ever.

You can even customize the way you see XLT's display. Viewing Angle lets you adjust all 8,192 pixels to your preference, and compensates for temperature changes.

Completely reverse the screen from dark on light/light on dark, with a push of a pad!

(Spectrum XLT is covered by U.S. & foreign patents.)

**1-800-547-6911**

Andy, Darryl and Larry hunt an area of Civil War action on private ground in Central Kentucky.

**METER I.D.'S DETECTED TARGETS**

Hear a signal, check the target I.D. on the meter, then pull the trigger and read target depth

**4 HUNTING MODES**

Both all-metal and discriminate modes for all kinds of hunting in all kinds of soils

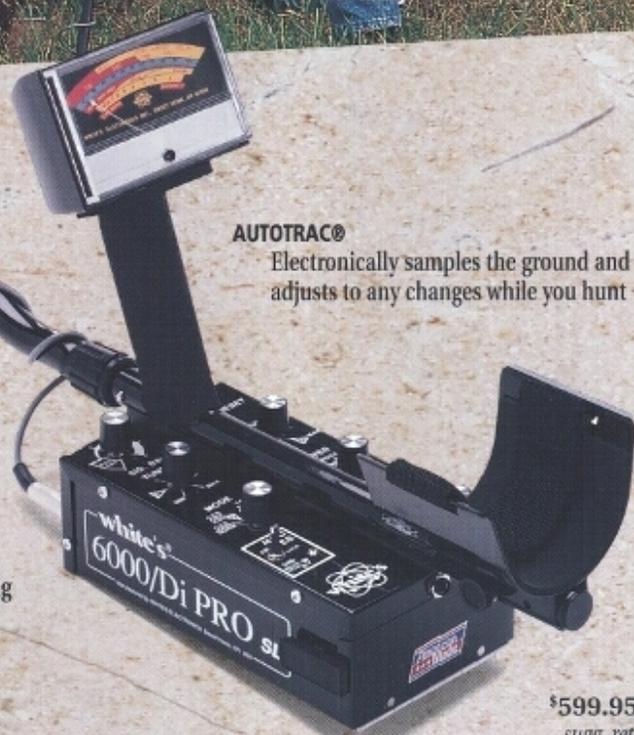

**SILENT SEARCH OR AUDIBLE THRESHOLD**

**TRIGGER MODE SWITCHING**

Hunt in discriminate to ignore junk, then switch to All-Metal for accurate pinpointing

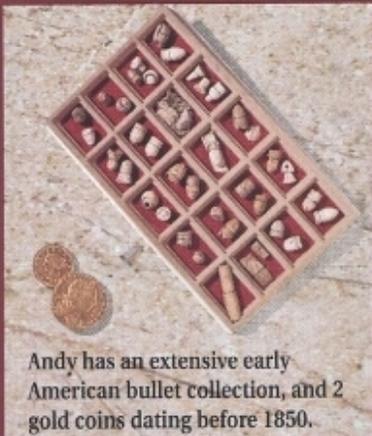

**AUTOTRAC®**

Electronically samples the ground and adjusts to any changes while you hunt

*The Pro's & Silver Eagle*

\$599.95  
sugg. ret.

Andy has an extensive early American bullet collection, and 2 gold coins dating before 1850.

Andy got hooked on metal detecting when he went along with buddies Darryl and Larry "to uncover whatever they might find". By the end of the day, Andy had recovered enough Civil War artillery shells that he was hooked. He bought his first detector - a White's. That was 12 years and several detectors ago. Now, virtually every Saturday finds Andy out detecting with his 6000/Di Pro SL.

The center of the most important Civil War action in Kentucky, The Battle of Perryville, was waged just 10 miles from Andy's hometown. The 700 people in Perryville were host to troops numbering 40,000. The South finally retreated, but not before many shells were fired and lives were lost.

While work and other interest haven't allowed Darryl and Larry to hunt as much as they would like in recent years, Andy is quick to point out that he owes much of his success to them. "They did the research, reading diaries and accounts of the time, and I was the 'P.R. guy', knocking on doors and getting the owner's permission for us to hunt", says Andy. Between the 3 of them, they now have a very impressive collection of Civil War relics. Andy's "mini-museum" is home to a 6 ft. showcase crammed with every kind of bullet imaginable. His collection includes buckles, breastplates, buttons, coins and cannonballs. Some of his best finds include a 200 year old Washington Inaugural Button, an early Union Eagle breastplate converted to a buckle, and 2 gold coins - a 1772 British Gold 1 Guinea, and an 1847 \$2 1/2 gold piece.

Andy praises the improvements in depth and sensitivity in the 6000 over the years. He hunts over areas he and others have hunted many times before. "Just when I think I've got it all, a better model comes along - with stronger, deeper signals than the one before. I stick with the 'Pro's' because I'm familiar with them and I don't have to miss a minute of hunting reading the instructions".

## THE 6000/DI PRO - OUR TRADITIONAL WORKHORSE

Over the years, more people have used the 6000 than any other detector. Why? Performance.

This detector is built on a successful formula that has been improved year after year to meet the needs of our customers. The Pro has the flexibility and sensitivity to hunt for every type of treasure - coins, jewelry, relics and gold nuggets - in virtually every kind of hunting situation.

The Pro is totally operator adjustable -

nothing is factory preset. Adjust the level of discrimination from none all the way through the range of trash and treasure.

Choose one of the 4 hunting modes to accommodate all kinds of grounds. Set the Signal Balance to maximize performance. Eliminate false signals in extreme grounds with Hot Rock Rejection. Track ground changes automatically with AutoTrac®. Preset's on each control make it easy for even new users to get started.

(6000/Di Pro SL, Silver Eagle, 5900 & 4900 are covered by U.S. & foreign patents.)

## BOOKS & VIDEOS

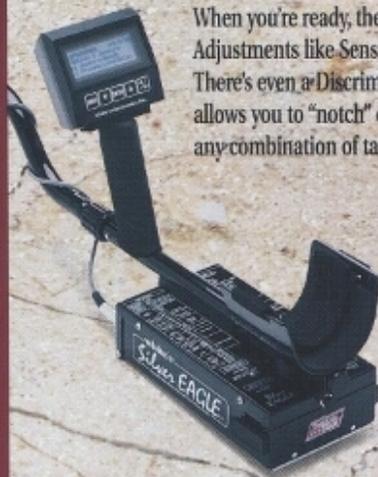

Books: Metal Detecting ... the Hobby" by Dick Stout, Michael Chaplan's "Urban Treasure Hunter", "Spectrum, Better Depth & Performance" by Darryl Townley, "H<sub>2</sub>O! Guide to Water Hunting" by Mike Brighty, and Ed Fedory's "Relic Hunter, the book". Videos: Spectrum 60 min. and new Spectrum XLT 90 min. video. Call 1-800-547-6911 for a Free Accessory Catalog.

## Streamlined, touchpad Eagle technology.

For those who want a top-of-the-line, turn-on-and-go detector, the Silver Eagle is perfect. Just follow the display's menu to the 3 Ready-to-Go! programs, pick one and you're off and hunting. But don't stop there.

When you're ready, there are 6 Basic Adjustments like Sensitivity and Threshold. There's even a Discrimination Editor that allows you to "notch" discriminate virtually any combination of targets. It's easy!

### EASY PINPOINTING

Display marks and fills for accurate digging

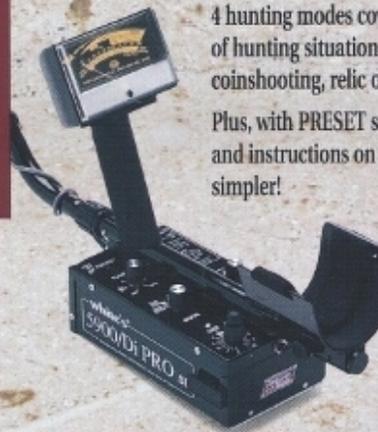

\$699.95  
sugg. ret.

## Top-of-the-line performance at a mid-price.

It's a winning combination of features. The 5900's meter works in conjunction with the audio to I.D. your target, and then tells you how deep to dig.

4 hunting modes cover the complete range of hunting situations - prospecting, coinshooting, relic or beach hunting.

Plus, with PRESET settings on each control and instructions on the box, it couldn't be simpler!

### 10-TURN GROUND BALANCE

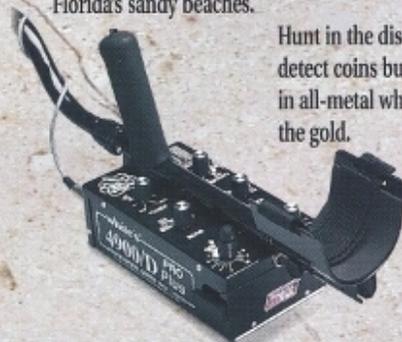

Precise tuning and control in extreme grounds

\$499.95  
sugg. ret.

## Built to find treasure in extreme conditions. Now with the Blue Max® depth advantage!

Whether you're after coins, relics, or gold nuggets, the 49'er has the full range of adjustability you need for optimum performance from California's highly mineralized soil to Florida's sandy beaches.

Hunt in the discriminate mode and detect coins but not nails. Or, hunt in all-metal when you're going for the gold.

\$399.95  
sugg. ret.

For a White's dealer near you call  
**1-800-547-6911**

Larry hunts along a fence line  
in Southwestern Utah.

**ELLIPTICAL SEARCH COIL**

Cover more ground with each sweep. Larger window in the sensitive center of the loop to accept tiny nuggets

**3-PIECE ROD SET**

Breaks down into a compact package when you carry your GM V/sat into the field

**VARIABLE SELF-ADJUSTING THRESHOLD**

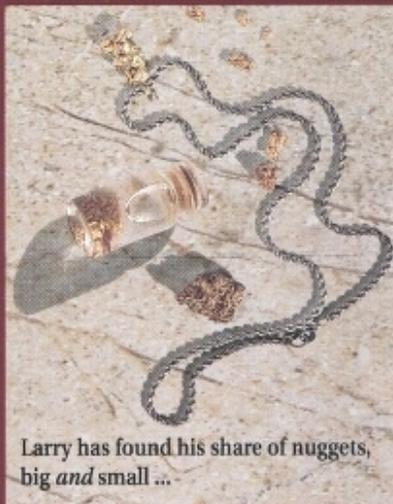

Precision control S.A.T. keeps the detector stable even when the ground minerals aren't. Fully adjustable to your conditions

**BUILT-IN DETECTOR STAND**

Doubles as a hipmount bracket. "D" rings included for easy chest mounting

**GOLDMASTER® V/sat**

Larry has found his share of nuggets, big and small ...

Larry Sallee is a true outdoorsman. During the fall and winter, he leads guided hunts for everything from bighorn sheep to rocky mountain elk - from Colorado to Arizona. The rest of the year, Larry prospects many of those very same areas in search of the earth's ultimate treasure - gold.

In the six years Larry's been using a detector, he's gone from novice gold hunter to seasoned professional. Larry's 1993 prospecting book, "Zip! Zip!" has become required reading for many prospectors. "After giving instruction in the field, I realized there was a lot that people needed to know.

The book is an extension of your instruction manual."

Like most electronic prospectors, Larry hunts areas that have produced gold in the past. He relies on research to locate old placer mines and tailing piles. "With the improvements in detector technology every year, you can find nuggets even in areas that have been hammered by other detectors. Often, they'll be smaller, deeper nuggets that you didn't hear before."

Larry has found his share of big gold, as well. His biggest nugget was a 3 1/3 ounce found a few years back. Since, he's found two 1 1/2 ounce nuggets. One day's hunting in California's El Paso mountains yielded 27 nuggets, and his wife Betty found 29 nuggets one afternoon in a hydraulic area near Grass Valley. "She was in heaven. She just stayed in one spot and dug up nugget after nugget." Larry goes on, "In the same area, I dug up several one grain nuggets about 4 inches down. Because of the area's low mineralization, I was able to take advantage of the Goldmaster's extreme sensitivity and run it to the max".

Getting this soft-spoken prospector to talk about his success isn't easy. But just ask him about his Goldmaster, and watch his face light up! This year, he and Betty are hoping to branch out and try their hand at beach hunting with a Surf PI. "Besides", says Larry, "I've heard it's pretty impressive as a backup machine in the gold fields, too."

#### PRECISION 40:1 GROUND BALANCE SYSTEM

Coarse, intermediate and fine adjustments. Helps tune out heavy iron mineralization in gold-bearing areas

#### 50 kHz OPERATING FREQUENCY

The optimum frequency for penetrating the most highly mineralized soil to detect even the tiniest nuggets

#### HIGH RESOLUTION 10-TURN TUNER

Precision tuning for the ability to attain the smoothest audio. Crystal clear signals let you hear the smallest, deepest targets

\$499.95  
sugg. ret.

## THE CHOICE OF THE PRO'S FOR ONE REASON. IT'S SIMPLY THE BEST AT FINDING GOLD.

If you're after gold nuggets, big and small, the Goldmaster V/sat is the detector you need.

We added features and made refinements in our Goldmaster for smoother operation - especially in the extreme grounds found in gold-bearing areas. The results? A measurable increase in depth and sensitivity, in even the hardest to hunt areas.

Sheer power runs the GM V/sat. The 50 kHz operating frequency, found only on the V/sat, penetrates even the most highly mineralized ground to detect tiny nuggets.

The ability to tune out the heaviest mineralization comes from 40:1 precision ground balance. Only Goldmaster gives you so much control. Coarse, intermediate, and fine adjustments.

A new 10-turn Threshold Control gives you more precise resolution and the ability to attain a much smoother audio. Now, crystal clear signals let you hear even the smallest and deepest nuggets.

The self-adjusting threshold (S.A.T.) keeps everything humming along smoothly even when the ground minerals change dramatically. Now, you have precise control. The S.A.T. speed can be increased gradually, from normal to 50 times faster for more depth in the harshest grounds.

Trash like nails and small bits of iron can be distracting in gold-bearing areas, creating a lot of unnecessary, time-consuming digging. The needle on the GM's iron I.D. meter "jumps" and the audio signal "breaks up" on probable iron targets. You make the choice to dig it or not. Another GM exclusive.

Top this list of features off with a new 3-piece rod set that breaks down for easy storage, a detector stand that doubles as a hip or chest mount bracket, and a supersensitive elliptical search coil.

Goldmaster V/sat users tell us of nuggets recovered that other gold machines couldn't pick up. Some as small as the head of a pin. Others weighing in the ounces, but previously undetectable because they were so deep!

(Goldmaster V/sat is covered by U.S. & foreign patents.)

**Surfmaster's & PI 3000**

A chain and cross, basket ring, and Bulova watch are some of Steve's best 14 Kt. gold NYC beach finds.

Steve Kelly has found his way to White's catalog pages once again! If he looks familiar, it's because he graced the cover of last year's catalog with his wife Lenore. In 1992, he recovered a spectacular cache of six ancient coins in a New York City Park with his Spectrum. An ardent White's fan, Steve's had a great time with his newfound "celebrity". He passes out catalogs to curious folks who happen by while he's out hunting, and has helped more than a few people with some tips on how to operate their detectors. After reading a Surf PI field test published in a magazine, he decided it was time to broaden his hunting to include the beach.

A self-proclaimed year-round hunter, Steve says, "When the ground is too hard to dig, I hit the beach. Anything over 25 degrees is fine with me". He especially likes winter hunting, when the Eastern seaboard storms couple with a good high tide expose all kinds of new treasures. And with Steve's job at the New York City Transit Authority and his lifelong residence in New York City, he knows the beaches.

There is, however, a dark side to beach hunting, says Steve. It's called "black sand", highly mineralized areas of the beach which hide targets from even the best VLF detectors. "The fact that the Surf PI is a pulse induction detector, plus the fact that Lenore and I have been very happy with our Silver Eagle and Spectrum, made the buying decision easy." Steve goes on, "I was also impressed with the product reports praise of the extremely fast target response. The PI better isolates individual targets, rather than 'smearing' them like earlier Pulse Induction machines."

With the PI, Steve has added over 40 rings, several watches, gold chains and bracelets to his growing collection. "The Surf PI is deadly on gold and deep targets", Steve says. "And it's definitely the ring machine".

## SURFMASTER® PI. FINDS THE COINS & JEWELRY OTHER BEACH MACHINES MISS.

The Surf PI combines pulse induction's proven depth and sensitivity on the beach with a detector that's as easy to use as White's land models.

It's easy enough for first-timers, with the performance that makes it the choice of veteran beach and surf hunters. The Surf PI detects coins and jewelry at exceptional depths - even in the heaviest mineralization - black sand and wet salt. The PI's ability to "see through" black sand has produced a new layer of hunting that other detectors can't reach.

The Surf PI may be swept either quickly or slowly - with virtually no change in sensitivity. It is designed to be very sensitive to gold and nickel alloys, as well as copper and silver.

The PI features fully automatic tuning that adjusts while you hunt, and an audio tone that increases in volume rather than pitch when a target is detected.

From sea to shining sea, the Surf PI is making quite a splash!

(Surf PI, Surf II, and PI 3000 are covered by U.S. and foreign patents.)

### ACCESSORIES.

Two-piece diver rod, & Pulse Diver 950 weighted loop (for previously purchased Surf PI's - must be installed at a White's Service Center).

For a Free Accessory Catalog, call 1-800-547-6911.

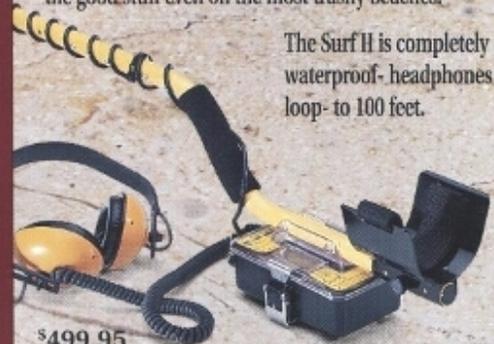

## On the beach or in the water ... it's easy to find treasure with the Surf II.

For freshwater beach and water hunting, the Surf II can't be beat. Just set the two controls to one of the PRESET settings, and you're ready to find treasure. You choose All Metal, Low Disc or High Disc, depending on where you're hunting and what you want to detect.

VLF circuitry gives quick target-to-trash recovery pick up the good stuff even on the most trashy beaches.

The Surf II is completely waterproof - headphones to loop - to 100 feet.

\$499.95  
sugg. ret.

## NEW! Surf PI Deep Diver with diver rod and Pulse Diver 950 weighted loop.

(See Surf PI at left for full description.)

\$629.95

For a White's Dealer near you call  
**1-800-547-6911**

Ed searches an old site in Southern California.

Daggers dating 150 B.C. and an ancient stone idol Ed recovered in Greece.

Ed Milota goes for the big treasure. He has recovered everything from ancient pieces of history to cache's of coins that would become a families inheritance.

Ed is recognized as an authority on

White's two-box detectors - primarily the TM series.

Ed has been detecting since 1954 and with White's as an Authorized Dealer since 1964. After his retirement from a So. California utility company in 1982, he and his wife Natalie, opened "Search & Recover Enterprises", specializing in locating lost items, from septic tanks and hazardous waste, to jars of buried coins.

Legends of buried treasure have taken Ed to Mexico, the Philippines, Greece, the Dominican Republic, Germany, Holland and Italy. In the Philippine jungles, he searched for the \$100 Billion treasure buried by General Yamashita during World War II. Ed was among the group who uncovered thousands in silver dollars in 1980 in the Sierra Nevada's. The 70 lb. cache of coins became known as the "Goat Doctor's Cache", part of a booty buried by a faith healer.

Nowadays, Ed keeps his metal detecting closer to home. He works part-time for Distributor Jim Normandi assisting at shows and seminars.

### TM 808 RECOVERS BURIED TREASURE 4 - 20 FEET DEEP

If you're after large, deeply buried treasure, the TM 808 is for you. The 808 rejects ground minerals to detect deep- even through mineralized soil.

The 808 has been beefed up with advanced electronics, more power, and simpler adjustments. It's operable virtually anywhere, regardless of interference or ground minerals. It's easier than ever to tune. It's a great combination of factory settings *with* operator adjustments for complete flexibility. There are preset settings in English and Spanish on each control for hassle-free setup.

The TM is ideal for locating coin caches, treasure chests, and hordes of gold or silver in either coin or bullion form. Use the Cave mode to locate caves, wells, or tunnels - all popular hiding places for buried treasures.

The TM 808 is also perfect for finding septic tanks, tools, equipment, metal pipes, and relics.

*(Instruction Manual and Video available in both English and Spanish.)*

#### NEW! SIGNAL BALANCE CONTROL

Adjusts the receive signals to allow use almost anywhere regardless of mineralization, or outside interference

#### TWO MODES OF OPERATION

Use the Cave or Metal Mode

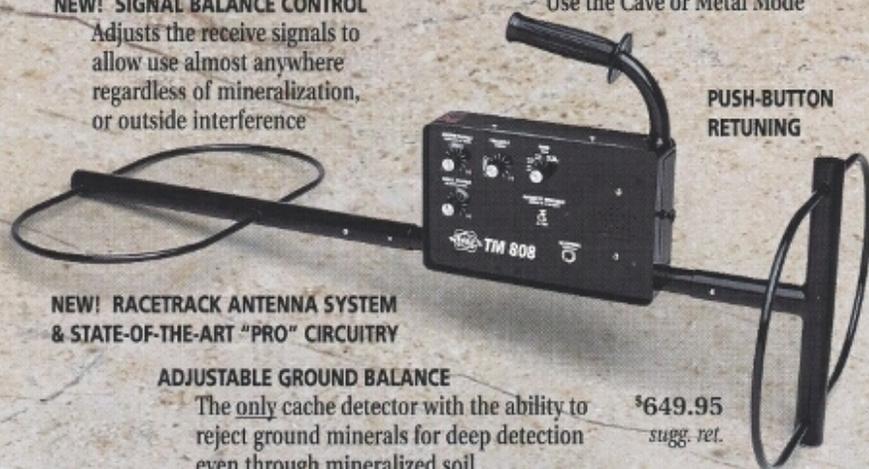

#### PUSH-BUTTON RETUNING

#### NEW! RACETRACK ANTENNA SYSTEM & STATE-OF-THE-ART "PRO" CIRCUITRY

#### ADJUSTABLE GROUND BALANCE

The **only** cache detector with the ability to reject ground minerals for deep detection even through mineralized soil

\$649.95  
sugg. ret.

## TM 808 & Classic Series

**TWO- CONTROL SIMPLICITY MEETS TOP-OF-THE-LINE TECHNOLOGY! NOW WITH THE BLUE MAX DEPTH ADVANTAGE.**

The Classic III Plus is packed with performance at a great price. We used our tried-and-true Classic III as a proven platform for a redesigned, much more powerful circuit. Now, engineered to use the maximum depth capabilities of the Blue Max 950 search coil.

The III Plus has it all - simplicity, performance, depth, *and* comfort. This detector is built to find coins and jewelry, and proves that you don't have to make a lot of adjustments to get discrimination and depth. Whatever the ground conditions, the Classic III Plus ignores minerals in the soil. There's even a special setting for the hardest to hunt areas - black sand.

Just set the two controls at one of the Preset settings and you're ready to go. Adjust the sensitivity at the edge - where you'll get maximum depth from your Blue Max loop. Depending on what kind of treasure you're after, use the Ring Range or Coin Range settings. Ring Range is great for beaches, and Coin Range is perfect for parks, school yards, and house yards.

Add the total versatility to use the entire Blue Max line of search coils, and you've got the flexibility to find it all!

**BLUE MAX® 950 9 1/2" SEARCH COIL**

Depth and sensitivity from our top-of-the-line loop. Accepts all Blue Max accessory loops, too

**FREQUENCY ADJUST CONTROL**

Eliminates interference from other detectors. Great for competition hunts and other crowded hunting spots

*(TM 808, Classic III Plus, III, II & I are covered by U.S. & foreign patents.)*

**A great mix of high performance and low price. In a simple, comfortable little package.**

**\$299.95**  
sugg. ret.

**Easy to use, affordable, and it ignores junk!**

**\$199.95**  
sugg. ret.

**Our lowest priced detector ... yet it still ignores junk.**

**\$149.95**  
sugg. ret.

The Classic III is a detector with something for everyone. It's lightweight and easy to use, but with the power and depth usually found on more expensive detectors.

The Classic III has a list of features that perform; a frequency adjust control great for competition hunts, and very slow sweep with quick recovery assures that you don't miss a thing. You get the flexibility of fully adjustable discrimination and sensitivity.

Top it off with Silent Search, a powerful all-metal mode for pinpointing, and interchangeable loops and you're ready to find it all!

The Classic II is simple and reliable. Just set the DISC and SENS controls to either Ring Range or Coin Range and start finding treasure. No complicated adjustments here.

The Classic II is set to ignore the soil's mineral, and the DISC control lets you set the audio for strong sounds on coins and jewelry, and broken, ratty tones on junk. You dig up just the good stuff!

A true "turn on and go" detector, the Classic I is the perfect choice for kids, as a backup detector for anyone on a budget.

Parks, schoolyards, even your own backyard could hold valuable and interesting treasures.

But don't be fooled by the Classic I's low price and simplicity. It's got performance built-in. Just set the single control to either Ring Range or Coin Range and sweep the loop. The Classic I does the rest!

**DISCRIMINATE OUT JUNK OR PICK UP ALL METALS**

Disc. Control adjusts to eliminate trash. Flip the trigger and switch to All-Metal Mode for accurate pinpointing or to search for relics and iron

**TWO ROD-MOUNT POSITIONS**

Forward as shown, or under the armpit. Easy to hipmount, too

**SIMPLE, TWO CONTROL DESIGN**  
PRESET settings for no-fuss hunting

**\$349.95**  
sugg. ret.

## SPECIFICATIONS

### SPECTRUM® XLT

High performance metal detection in an all-new size and weight. New features, more programs, and ultra-light. Just 4 lbs!

\$899.95

Our best detector is now even easier to use - new options and shortcuts that build on Spectrum's simple menu format ...

**5 Ready-to-Go! Programs ... plus 4 you create, store, and now name.**

**Coin** rejects most common junk like nails, foil, and pulltabs, and picks up most coins, and large jewelry.

**Coin & Jewelry** picks up most coins and jewelry, while rejecting junk.

**Jewelry/Beach** is designed for the beach - picking up coins and jewelry and ignoring some junk items.

**Relic** responds to all types of metals, but discriminates between types and sizes of metal with variations in audio tones.

**Prospecting** responds to all types of metals, but shows a VDI number only for possible gold nuggets.

**Custom 1 thru 4** allow you to save and assign names to your own special programs.

When you're ready move on to XLT's ...

**10 Basic Adjustments.** It's easier than ever to customize a Ready-to-Go! program.

**Volume** adjusts to your hearing needs.

**Threshold** tunes to your preference.

**Tone Adjusts** features 255 different pitches.

**Audio Disc.** selects all metals or discriminates out junk.

**Silent Search** allows searching without a threshold tone.

**Mixed Mode Audio** combines the best of all-metal and discriminate modes.

**AC Motion Sensitivity** selects the level of sensitivity in motion modes.

**DC Motion Sensitivity** selects the level of sensitivity in non-motion and pinpointing modes.

**Backlight** adjusts the display brightness. Great for low light.

**NEW! Viewing Angle** adjusts the display for low or high temperature visibility.

For serious hunters ...

**Now, more than 29 Pro Options - easier to get to, easier to adjust!** "Engineer" and save your own hunting programs to use again & again. **A wide range of adjustments in 5 categories; Audio, G.E.B./fac, Discrimination, Display and Signal (Transmit/Receive).**

XLT's exclusive precision target info ...

**SignaGraph®** has more resolution, detail and accuracy. Display shows a unique bar graph "signature" for every target. Plus, you see a VDI number, and new target icon. As you sweep, XLT collects and displays information. Good targets read with a compact graph and bars to the right of zero. Junk gives a "smear" with bars below zero.

**9 1/2" interchangeable Blue Max loop.**

**Power Supply:** New slide-in 12 Volt Nicad system delivers 30% more hunting time. Quick and overnight charger, backup penlight holder also included.

### SILVER EAGLE®

The professional performance you expect from an Eagle, yet streamlined and simplified to top-of-the-line basics.

**3 Ready-to-Go! Programs ...**

**Coin & Jewelry** rejects most common trash including nails, and accepts coins and jewelry.

**Jewelry/Beach** eliminates nails/iron and small foil while detecting jewelry.

**Prospecting/Relic** accepts all metals and

features built-in autotuning.

**6 Basic Adjustments.** The essentials make it easy to customize the Silver Eagle.

**Volume** is adjustable to suit a wide range of hearing needs.

**Threshold** tunes to your preference.

**Sensitivity** has 80 different settings.

**Audio Disc.** selects all metals or discriminates.

**Silent Search** or Audible Threshold

**Viewing Angle** adjusts the displays contrast.

**Unlimited discrimination reject/accept options with DISC Editor.** 190 different accept/reject notches you choose to see and hear, or ignore. Create your own notch detector! Target Label and VDI # for instant target I.D.

**Precision Pinpointing.** Display marks and fills for pinpointing and depth reading.

**9 1/2" Blue Max loop standard.** Accepts all Blue Max loops.

**Power Supply:** Drop-in "C" cell pack

\$699.95

### 6000/DI PRO

Our top-of-the-line analog detector - powerful and versatile for all kinds of hunting.

**Large Meter** I.D.'s target and reads depth when you flip the trigger.

**PRESET control settings**

**AutoTrac®** samples the ground and electronically resets for maximum sensitivity and depth.

**4 Hunting Modes:** GEB/DISC, GEB/NORM, TR/DISC, GEB/S.A.T.

**Discriminate control** adjusts the level of trash you reject.

**Hot Rock Accept/Reject** allows you to choose whether to hear troublesome mineralization or reject it

**Tuner control** selects the optimum threshold.

**On-the-box instructions**

**Signal Balance Control** adjusts for improved performance and cleaner target signals.

**Trigger** alternates between hunting modes, reads depth, and retunes.

**9 1/2" Blue Max search coil standard.** Accepts all Blue Max loops.

**Power Supply:** Drop-in "C" cell pack

\$599.95

### 5900/DI PRO

The power, sensitivity, and features relic hunters demand.

**Large Meter** I.D.'s target and reads depth when you flip the trigger.

**4 Hunting Modes:** GEB/DISC, GEB/NORM, TR/DISC, GEB/S.A.T.

**Discriminate control** adjusts the level of trash you reject.

**10-Turn High Resolution Ground Balance.** Precision tuning for prospecting and relic hunting.

**PRESET control settings**

**Hot Rock Accept/Reject** allows you to choose whether you hear troublesome mineralization or reject it

**Self-Adjusting Threshold (S.A.T.)** keeps detector stable in varying grounds.

**Signal Balance control** adjusts for improved performance and cleaner target signals in all types of grounds.

**Trigger** alternates between hunting modes, reads depth, and retunes.

**On-the-box instructions**

**9 1/2" Blue Max search coil standard.** Accepts all Blue Max loops.

**Power Supply:** Drop-in "C" cell pack

\$499.95

### 4900/DL MAX

Fully adjustable - built to find treasure in extreme ground conditions. A favorite of relic hunters & prospectors - now with the added depth and sensitivity of the Blue Max search coil!

**Double stacked 10-turn G.E.B. control.** Precision tuning for prospecting and relic hunting.

**4 Hunting Modes:** GEB/DISC, GEB/NORM, TR/DISC, GEB/S.A.T.

**Discriminate Control** adjusts the level of trash you reject.

**Self-Adjusting Threshold (S.A.T.)** keeps the detector stable even when the ground minerals aren't.

**Signal Balance control** for improved performance and cleaner target signals

**PRESET control settings**

**Hot Rock Accept/Reject** allows you to choose whether you hear troublesome mineralization or reject it

**On-the-box instructions**

**8" Blue Max search coil standard.** Accepts all Blue Max loops.

**Power Supply:** Drop-in "C" cell pack

\$399.95

### GOLDMASTER® V/SAT

Designed for the special needs of today's prospectors with a single purpose.

**Finding gold.**

**Precision 40:1 ground balance.** Coarse, intermediate and fine adjustments. Helps tune out heavy iron mineralization - insuring deepest penetration.

**Iron I.D. Meter** Needle jumps and audio stutters on probable iron targets (when

ground mineralization will allow).

**50 kHz operating frequency.** The optimum frequency for penetrating the most highly mineralized soil to detect the tiniest gold nuggets.

**Variable S.A.T.** Precision control self-adjusting threshold keeps the detector stable even when the ground minerals aren't. Fully adjustable to your conditions.

**3-piece rod set.** Breaks down easily.

**High resolution 10-turn threshold.**

Precision tuning for the ability to attain the smoothest audio. Crystal clear signals let you hear the smallest, deepest targets.

**Audio overload alert alarm**

**Detector stand.** Doubles as hipmount and chestmount bracket.

**Elliptical LongScan search coil**

**Power Supply:** 8-cell 12 Volt pack

\$499.95

\$599.95  
\$629.95 w/  
weighted loop,  
or in Deep Diver  
configuration

### SURFMASTER® PI

Unbelievable depth and sensitivity on the hardest to hunt black sand beaches and in wet salt.

**Pulse Induction detection** for exceptional depth on coins and jewelry in saltwater and mineralized ground.

**Pulse Delay Control** selects the level of rejection on nonferrous trash.

### Quick target recovery

**Tuner Control** adjusts the threshold tone and checks battery strength.

### Automatic ground rejection

**2 rod-mount positions.** Hipmounts, too.

**Variable sweep speed** - from slow to very fast with no loss of depth.

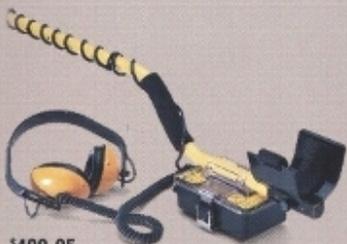

**Transmit Frequency:** 614 pps

**Audio Frequency:** 600 Hz

**3 ways to hunt.** 9 1/2" Surf Pulse loop and beach/shallow water rod standard. Also available in 2 other configurations: With 9 1/2" Pulse Diver zero buoyant loop and beach/shallow water rod, and with 9 1/2" Pulse Diver and short, diver-style rod.

**Waterproof to 100 feet**

**Power Supply:** 8 "AA" penlight batteries

\$499.95

### SURFMASTER® II

Inland freshwater beaches and coastal waters are easy to hunt with the Surf II.

**Discriminate Control** with 3 PRESET settings; All metal, Low Disc. (detects small gold rings with some discrimination), and High Disc. (detects most coins and ignores most junk).

**Sensitivity Control** maximizes depth.

**Quick target-to-trash recovery** picks out treasures mixed in with junk.

**Low Battery Alert Light** glows when batteries are low.

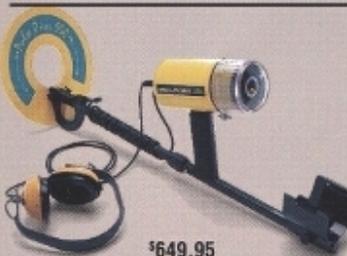

**On-the-box instructions.** Start hunting without reading the manual.

**Completely waterproof to 100 feet**-headphones, case, loop. Tough enough to withstand years of sand and salt.

**2 rod-mount positions.** Hipmounts, too.

**9 1/2" Amphibian search coil.**

**Power Supply** Three 9 volt transistor batteries

\$649.95

### PI 3000

The clear choice for scuba and deep treasure diving.

**Pulse Induction detection** is the absolute best for saltwater. Detects all metals while tuning out ground minerals - in both salt and fresh water.

**One control simplicity.** Turns the detector on, tests batteries, and tunes.

### AutoTrac® Tune/Operate mode

Automatically compensates for changes in ground minerals as you hunt.

**Visual Target L.E.D.** glows brightly when a target is detected.

**Pulse Diver 9 1/2" search coil** slices through the water with ease.

**Diver Rod** is adjustable, and designed for especially for diving.

**Waterproof to 150 feet**

**Power Supply:** 6 cell 9 Volt penlight battery pack

\$649.95

### TM 808

Detects, large deeply buried treasures 4 - 20 feet deep.

**Two modes of operation**- "Cave" locates tunnels, caves and wells, "Metal" is great for septic tanks, tools, equipment, pipes, and relics.

**Racetrack antenna system & "Pro" circuitry** for added depth and sensitivity.

**Signal Balance Control** adjusts the receive signals to allows use almost anywhere, regardless of mineralization or outside interference.

**Adjustable ground balance** rejects ground minerals for deep detection even through mineralized soil.

**PRESET control settings** labeled in English & Spanish

**Easy-view meter** shows battery strength

**Push-button retuning** for non-stop hunting

**Instruction manual and video available in English and Spanish**

**Power Supply:** Drop-in "C" cell pack

\$349.95-Classic III Plus  
\$299.95-Classic III

### CLASSIC III PLUS, CLASSIC III

Value packed with features and performance that delivers, Easy, too!

**Discriminate Control** with 2 DISC ranges-Normal & Black Sand. Detects coins, gold, silver, and jewelry even in high junk areas. 2 PRESET settings. Ring Range PRESET for detecting all jewelry or Coin Range for hunting trashy areas.

**Sensitivity Control** maximizes depth.

**Very-slow sweep and quick recovery** picks up coins and rings mixed in with junk.

**Frequency Adjust Control** eliminates interference from other detectors. Great for crowded areas or competition hunts.

### Silent Search

**2 Hunting Modes:** Discriminate and All-Metal. Flip to All-metal for pinpointing, or lock it in to search for relics and iron.

**Trigger Switch** flips to All-Metal. Defines the target, great for pinpointing.

**2 rod-mount positions.** Hipmounts, too.

**Search Coils:** III Plus features the Blue Max 950 loop featured on top-of-the-line detectors for 30% more depth. III features 8" loop.

### L.E.D. Low Battery Alert

**Power Supply:** Three 9 Volt transistor batteries

\$199.95

### CLASSIC II

Fun to use. Affordable. And it ignores junk!

**Discriminate Control.** 2 PRESET settings: Ring Range PRESET for detecting all jewelry, or Coin Range for hunting trashy areas.

**Sensitivity Control** adjusts for maximum depth.

### Built-in automatic ground exclusion.

Set by the experts at White's. You spend less time setting up and more time hunting.

**Rapid target recovery.** You hear more good targets, even right next to junk.

**Silent Search.** The only sound you hear is the detector responding to targets.

**PRESET control settings**

**Trigger Switch** flips to "Zero Discrimination". Defines the target, great for pinpointing.

**Rod-mounts 2 ways.** Forward under the lower rod, or under the armcup. Hipmounts, too.

**Power Supply:** Three 9 Volt transistor batteries

\$149.95

### CLASSIC I

Turn-on-and-go ease, built-in performance, with real discrimination.

**Discriminate Control.** 2 PRESET settings: Ring Range PRESET for detector all jewelry, or Coin Range for hunting trashy areas.

**Rapid target recovery.** Hear those good targets, even mixed in with junk.

### Built-in automatic ground exclusion.

**PRESET control settings**

**Rod-mounts two ways.** Forward under the rod, or under the armcup. Hipmounts, too.

**Power Supply:** Three 9 volt transistor batteries

# White's AutoScan®

**A PERSONAL SEARCH DETECTOR LIKE NO OTHER.  
FROM THE MOST TRUSTED NAME IN METAL DETECTION.**

White's AutoScan® Personal Search Detector is a lightweight, well-balanced metal detector with the sophisticated electronics to handle today's toughest security requirements.

The AutoScan is extremely sensitive on small metals. It gives a very rapid alarm response immediately as you pass over a metal object - even very small knives, guns, and other weapons.

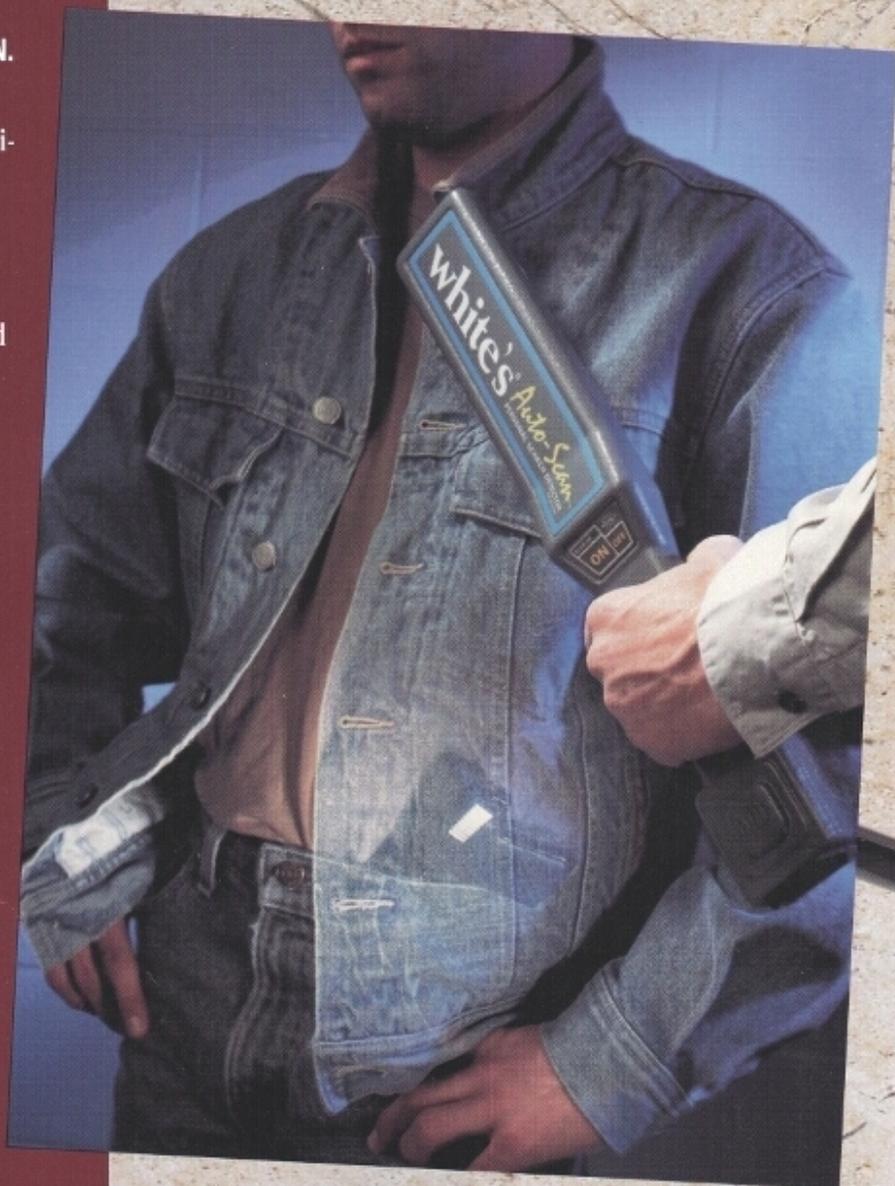

Setup is completely automatic. Just press the ON pad: the AutoScan self-tunes for detection and checks battery power. A separate OFF pad guards against accidentally turning the detector off. The blinking "ready-light" is your assurance that the AutoScan is detecting at full sensitivity.

The AutoScan PSD's physical design is *nonthreatening*, reducing aggravation during the screening process.

Only AutoScan offers you an increase in volume and pitch depending on a metal's size. Large metallic objects respond with a strong, high-pitched sound. Smaller metals respond with a clear, lower frequency tone.

A pulsed alarm alerts when the battery reaches a 10% charge level. Because of a very low draw, you can count on at least 50 hours of use from a single 9 Volt battery.

White's AutoScan Personal Search Detector. Light enough for extended use. Totally automatic. With the unequalled sensitivity and reliability security professionals demand.
