

# SPRING '94

*Highlighting the very best detectors for all-around detecting,  
prospecting, beach and water hunting.  
Eagle® Spectrum®, Goldmaster® V/S.A.T., and Surfmaster® PI.*

# The deal of the season. Spectrum\* with our shockproof hardcase or new Blue Maxima 15" loop.

\$895.00  
sugg. ret.

Your hunting success in the months to come depends on using the best equipment available. Hands down, the best all-around detector in the field is Spectrum. And now, there's never been a better time to buy a Spectrum *and* pick up your choice of two valuable accessories absolutely free.

Save *big* with your Spectrum purchase between March 14 and June 30. Choose either a free shockproof hardcase, or our brand new Blue Maxima 1500 search coil.

The hardcase is simply *essential*—the most secure protection for your detector investment.

This case is rugged enough to take years of use in the field, airport tosses, you name it. It's our most popular, with a retail price of \$99.95.

For big, deep treasure, you need a powerful loop. The Blue Maxima has the capability to reach *deep* to detect valuable relics and caches. How deep? With a Spectrum, you can expect to detect large targets several feet deep!

Retail value, \$149.95. For a limited time, yours free.

Free is a very good price! Call 1-800-547-6911 for an Authorized White's Dealer near you.

# The new Goldmaster® V/SAT It's all that it was ... and more.

*"I took the new Goldmaster V/SAT to an area that had produced some larger nuggets in the past. Hunting a bench on the side of a wash, I picked up a soft, solid signal. Digging an inch or two at a time, I checked the signal. There was no breakup in the sound on the iron I.D.*

*About 6" down, the ground became very hard and I knew I was in virgin soil that had not been disturbed by the old miners. At 13 3/4 inches, I pulled out a very dirty target, extremely heavy for its size. I knew I had a piece of gold. It weighed in at over 6 ounces.*

*We hear of larger nuggets being found, but most at shallow depths. Being able to adjust the S.A.T. to the exact setting for the ground and minimize hot rock responses were the reasons I found the nugget at that depth in the heavy mineralized soil."*

*Chuck Morris, Utah*

When White's asked me what prospectors wanted in the next generation of Goldmaster, my first reaction was recalling the adage "If it ain't broke, don't fix it". But I attempted to focus on those functions that could be improved. The result is the new Goldmaster V/s.A.T.

We have chosen to enhance two areas of the GM's performance. The operating threshold, and the speed of the S.A.T. (self-adjusting threshold).

First, the single-turn carbon pot on the Tuner (threshold) Control has been replaced with a high quality wire-wound 10-turn pot. This gives you the ability to attain a much smoother threshold resulting in increased sensitivity.

Second, a Variable S.A.T. control was added to increase depth when working in harsh conditions such as extreme iron mineralization or alkali salt flats. This single-turn pot increases the S.A.T. speed gradually from the normal speed to one 50 times faster. Now, you need only the amount of increase necessary to control those extreme ground conditions.

Lastly, White's designed a new 3-piece rod set for a very compact package when you carry your GM into the field.

*Jimmy "Sierra" Normandi*

# Eagle. Spectrum.. So smooth, so simple ... even "hunted out"

\*Free hardcase or Blue Max 1500 only with Spectrum or Silver EAGLE's purchased between March 14 & June 30, 1994. Valid only at participating White's Dealers. White's reserves the right to make substitutions of equal or greater value in the event of shortages.

Every day, there are more and more folks out there using metal detectors. Chances are, the sites you hunt have been detected before. Maybe once or twice. Possibly many, many times. That's why so many people choose the most sensitive, deepest detecting machine on the market. A detector that reaches beyond the limits of other detectors to open up a new layer of hunting.

That detector is Spectrum.

Only Spectrum is so packed full of exclusive features *and* performance, in a straight-forward menu-driven format.

Spectrum is truly the ultimate combination of simplicity and potential. This is the detector that matches your level of experience and expertise.

Choose a Preset Program and you're off and hunting right out of the box. They're factory-set for great overall performance.

PROGRAMS Pg. 1/28  
 Coin & Jewelry  
 Jewelry/Beach  
 Relic

PROGRAMS Pg. 2/28  
 Prospecting  
 Custom Program 1  
 Custom Program 2

With a little experience, move on to the 9 Basic Adjustments. Here, you can modify a Preset Program to create your own custom program.

Your new program can be easily stored for recall, even after you remove or replace the batteries! (Nicad batteries, charger and back-up C-cell pack are included.)

BASIC ADJ. Pg. 1/38  
 Volume  
 Threshold  
 Tone Adjust

BASIC ADJ. Pg. 2/38  
 Audio Disc.  
 Silent Search  
 Mixed-Mode Audio

If you choose, explore the 20 Pro Options and

"engineer" the Spectrum to your exact hunting needs. Here, you'll find the ultimate in custom detection. Options like Disc. Editor, Tone I.D., SignaGraph Options, Frequency Shifting, Transmit Power, and Preamp Gain. At every step, adjustments are simple to make, and simple to store. (These Pro Options are clearly explained in Spectrum's very detailed instruction manual and optional instruction video.)

BASIC ADJ. Pg. 3/38  
 AC (motion) Sens.  
 DC (non-mot.) Sens.  
 Backlight

# so sensitive, "hot" areas are new again.

Only Spectrum gives you all the information technologically available about detected targets. **SignaGraph®** displays a unique target "signature" for every target - whether it's a nail, a quarter, a ring or a pulltab.

Equipped with  
**SignaGraph™**  
"WHAT'S IN THE GROUND  
IS ON THE SCREEN."

There's a precise, recognizable pattern for coins and jewelry. A distinctive *smear* for junk. With just a little experience in the field, Spectrum users can glance at the graph and instantly "interpret" the target. With impressive accuracy.

VDI: 85.3  
(-) + | | | | | | | | | | (+)  
quarter

VDI: 21.5  
(-) + | | | | | | | | | | (+)  
nickel/ring

VDI: -56.0  
(-) + | | | | | | | | | | (+)  
iron

Couple SignaGraph with a VDI number and target label, and you've got more visual information than you'll find on any other detector. Add to that crystal clear audio signals you customize for pitch, volume and tone. You can't *see* into the ground, but Spectrum is the next best thing!

When you've detected a good signal, Spectrum's trigger pinpointing concentrates the signal and then activates target depth on the display.

Depth:  
12---9---7---5---3---1-0

Just watch the bars mark and fill for right-on digging.

If all this makes your head spin, be assured that thoughtfully engineered into Spectrum alongside all these features is a serious dose of fun. It's a common element in the hundreds of letters we receive about this detector. Along with the finds.

And while we hate to brag, going along behind other detectors and finding treasures they missed has put a smile on the face of many a Spectrum owner!

"Hunting with the Spectrum is like hunting a new place every time out. The last 18 months have yielded thousands of coins, misc, jewelry, and some nice relics. Add it all up, and I've paid for my Spectrum 3 times over!"

Stuart Duford  
Michigan

"When I retrieve a nice coin or some other lost article from the ground, I know everything has not been found. When I need therapy for mind or body, I take my Spectrum and I head for the looked-out places where I usually find myself a goodie or two!"

Charley Reed  
Missouri

High performance metal detectors starting at \$149.95

# Surfmaster. PI. The hottest detector on the beach - now even better.

*Two of California's most dedicated water hunters, Lance Rigg and Richard Losey, have a fruitful morning's hunt with their Surf PI's.*

**Surf PI with beach loop**  
\$599.95 *sugg. ret.*

**Surf PI with diver loop**  
\$629.95 *sugg. ret.*

From sea to shining sea, the Surf PI has made quite a splash this past year. The PI's simple operation and ability to "see through" black sand have resulted in unbelievable sensitivity and depth. Translation: Recovery of valuable coins and jewelry other detectors missed or couldn't reach.

Now, we've built on the PI's proven performance with some common-sense improvements in packaging and user convenience. An all-new case design features one-piece lid with a self-retaining "O" ring for improved water integrity. Two hipmount belt options have been added. Plus, we've waterproofed headphone and loop connectors for easy disconnect. Switching between the zero-buoyant Pulse loop and the accessory non-buoyant Diver loop is now a snap!
