

White's Coinmaster® Classic II

The shape of things to come.

\$199.95

Sugg. Retail

Depth and performance - at a price considerably less than the competition.

Now, there's no reason to spend more than two hundred dollars to get depth **and** discrimination.

Simple to use, but gutsy.

Just two controls, and a trigger. Yet loaded with the performance you'd expect from a more sophisticated detector.

Slow-sweep, Quick-Response Motion Discrimination.

No-nonsense, reliable discrimination, plus the option of hunting in All Metal!

Two Preset discriminate settings for digging less trash, more treasure.

You decide. When you're hunting beaches or areas where rings and jewelry can be found, set DISC at the lower Preset Ring Range. But if you're after coins and digging junk is distracting, use the Coin Range Preset.

Built-in automatic Ground Exclusion.

One of biggest treasure hunting hassles has been eliminated for you. The Classic II has been tuned by the experts at White's so you spend less time setting up and more time hunting.

YOUR AUTHORIZED WHITE'S DEALER:

Light, balanced, and rain-resistant.

The Classic II box is built for protection in light to moderate rain. One piece top allows water to drip off harmlessly.

Totally new mounting system - all the controls are designed to "fall to hand". Easy to reach. Easy to adjust. No matter how you mount it.

Two rod-mount positions, plus the option to hipmount.

Hunt with the box in the standard lower rod position, or move it up and under the upper rod assembly. Or simply take the box off the rod and thread onto your belt to hipmount.

Quick target-to-trash recovery so you don't miss a thing.

You know the scene. Your hunting a trashy area, coins and rings are mixed right in with the junk. But your detector sometimes misses the coin or ring laying right next to the nail. The Classic II's rapid recovery allows you to pick up more good targets, even when they're right next to a junk target. There's no need to work an area over and over.
