CLASSIC I.D.

The target I.D. system found on detectors costing much more - now in the simple, lightweight Classic style!

Ken White on the new Classic I.D...
"Our Target I.D. technology is second to none! White's pioneered visual target identification and now, we're proud to bring it to you in our new Classic I.D. It's a great way to get started with a White's detector!"

Here's a great way to get started finding treasure. Our new Classic I.D. takes the best of the proven Classic line and adds the accuracy and convenience of White's target I.D. The Classic's slow sweep speed and quick recovery pick up coins, jewelry, and relics even mixed in with junk targets. Give it a try! See for yourself ... the simplicity and performance are built right into the Classic I.D.

CUSTOMER IN THE SPOTLIGHT ...

I field tested one of the first Classic I.D.'s. I dug 32 coins the first day out in a trashy, "hunted out" park. My buddies and I then decided to try it on a Civil War camp we had hunted for 15 years. The highlight of that day was a small U.S. box plate 11 inches down. Next, I tried a very trashy park where my last trip had yielded only 7 coins. In 2 hours, I had 57 coins.

I recovered 225 coins and over 60 Civil War items in just a few days hunting. The Classic I.D. detects deep and the fast recovery picks out the good targets right on top of the junk. It's so easy to use ... a beginner can find just as much as an experienced hunter.

Dwain Croom

BLUE MAX 800 SEARCH COIL

Provides good depth and versatility. Interchanges with all Blue Max accessory search

DEEPER, MORE ACCURATE TARGET I.D.

White's new, patented I.D. system you can count on - even on those deep coins. See and hear what you've detected before you dig it up!

3-PIECE ROD SET

Breaks down into a compact package. Great for travel!

VERY SLOW SWEEP AND QUICK RECOVERY

Picks up coins mixed in with junk.

TRIGGER PINPOINTING

With just a flip of the trigger, switch to "Zero Discrimination" for easy pinpointing.

JUST TWO CONTROLS

Discriminate and Sensitivity controls. Both with Preset range settings easy operation. Ring Range detects all jewelry and coins. When hunting in trashy areas, set at the higher Coin Range to ignore junk and pick up most coins.

SILENT SEARCH DISCRIMINATION

Hear only the sound of treasure!

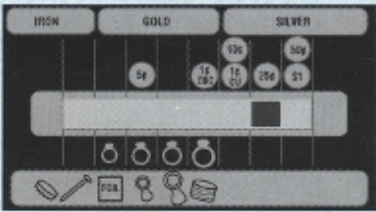

OPTIONAL ADJUSTABLE GROUND BALANCE

Preset by the factory to handle most grounds, but can be adjusted for extreme conditions.

SLIDE-IN BATTERY SYSTEM

Trouble-free "AA" pack delivers up to 70 hours of hunting.

GOLDMASTER 4/B

Faster, more precise ground balance for those tough conditions found in gold-bearing areas.

ELLIPTICAL SEARCH COIL

The elliptical design allows you to cover more ground with each sweep and presents an elongated window in the sensitive center of the loop for detecting the tiniest nuggets.

CUSTOMER IN THE SPOTLIGHT ...

I've used a White's Goldmaster for 8 years and have found thousands of nuggets. Two months ago, I bought a GM 4/B. I've gone over new ground and old ground and found many more nuggets.

Most of the ground I detect is very red iron-rich dirt. The new GM 4 is very easy to ground balance in this type of soil and having the speaker on top makes a big difference in the clarity of signals. The balanced weight allows me to hunt all day without getting tired.

In two months, I've found over 40 ounces of gold. I also worked a hydraulic pit that is mostly fine gold and found 41 pieces weighing a total of 0.4 DWT - some at a depth of four inches. The largest nugget in the photo is over 11 ounces.

I give the new GM 4/B an A+.

James Eakin

Built on the proven success of the Goldmaster series, the GM 4/B with **ERS** brings new ease to the challenge of ground balancing in the harsh soils of gold country.

If you're new to prospecting, the GM 4/B gets you out and hunting without the hassle of adjusting ground balance knobs. Veteran prospectors - you already know how an easy-to-use, yet precision ground balance system makes your hunting more productive. The bottom line? More gold!

3-PIECE ROD SET/BUILT-IN DETECTOR STAND

Breaks down into a compact package for easy transport. Locks together with rattle-free camlocks when assembled and ready to use.

NEW!

PATENTED ERS 1000:1 PRECISION GROUND BALANCE

What is ERS? It's a quantum leap in technology - taking ground balance resolution from 40:1 to 1000:1! "Electronic Ramping Systems" is the latest in White's Goldmaster innovations. ERS ground balance is simple. Extremely accurate. Very smooth. Touch the pad and follow the meter as your tune perfectly to the ground. GM 4/B's full ground balance range is adjusted in seconds - all with a simple touch of the + or - pads.

50 kHz OPERATING FREQUENCY

The optimum frequency for penetrating the ground to detect even the tiniest nuggets.

PHASE COMPENSATED GAIN

Allows you to adjust Gain or "sensitivity" without re-ground balancing.

NEW! PINPOINT TOUCHPAD

An additional tool in pinpointing the target if you desire.

TEN-TURN THRESHOLD

So stable it picks up the tiniest nuggets.

SELECTABLE SIGNAL BOOST

The flip of a toggle increases the audio gain or "sensitivity" by 3X or 5X when desired to enhance the detection of deeper or tinier nuggets. Great for hunting bedrock!

IRON I.D. METER & AUDIO

Just squeeze the trigger ... switch from All-Metal hunting to the Iron I.D. circuit for speedy target identification. Lock in the forward position and hunt full-time in Iron I.D. Needle "jumps" and the audio signal "crackles" on probable iron trash. There's more! The meter also indicates the degree of ground balance and checks battery strength.
