EAGLE
A New
Generation
in Metal Detection.

white's **EAGLE** T.M.

Invest A Little Time. Soar Above the Rest.

Leading the Way into the Future.

EAGLE is the product of four years of research and development. Using the latest in electronic microprocessor technology, White's engineers looked at what you wanted in a metal detector. More depth. More sensitivity. More discrimination options. High performance. Logical, no non-sense operation. The result? EAGLE. Microprocessor Controlled Metal Detection.

A Whole New Way of Looking at Things!

Liquid Crystal Display instructs on air and ground balancing, reads out Target I.D. and depth, indicates memory, battery voltage and more with the push of a key! The Touch Pad guides you step-by step through operating the EAGLE. Watch as the display reads out the I.D. of the target and the depth in half-inch increments.

One Touch Programmability.

Start out in EAGLE's preset program to accept most coins and valuables, reject most junk. Then as you gain experience, discriminate with unlimited

options. EAGLE expands adjustable discrimination for total operator flexibility into PROGRAMMABLE DISCRIMINATION. Two distinct methods to easily PROGRAM ANY CONFIGURATION OF TARGETS TO ACCEPT OR REJECT. No traditional notch peak limits! 95 target settings for unequalled flexibility to detect any or all metals. For example, "teach" the EAGLE to reject foil and pulltabs, yet still accept nickels by using examples either in the ground or in the air. Or edit the discriminate scale manually by scrolling with the EDIT keys.

Three G.E.B. Discriminate Modes.

Plus Electronic Ratchet Pinpointing.

- A **Audio Threshold** - White's standard motion discriminate mode (GEB/DISC) with threshold tone like the Di Pro!
- B **Silent Search** - Search in silence until a target is detected.
- C **Audio ID** - Interchangeable high or low tone to accept and reject targets. Motion Discriminate and All Metal non-motion operating at the same time to produce the ultimate Slow Sweep/No Sweep!
- Electronic Ratchet Pinpointing** - Each sweep shrinks target for highly accurate recovery.

Built-in Customer Satisfaction.

Even though EAGLE comes on in PRESET automatically so it can be easily used by anyone the first time out, the real value is built-in customer training and satisfaction. The most comprehensive training program ever! White's feels so strongly about the EAGLE that every Authorized White's Dealer who sells it must attend training to become certified "EAGLE TRAINED". We want customers to get hands-on training from a dealer who knows EAGLE inside and out. You'll be able to use EAGLE to full potential when you receive face-to-face training from an expert, so make sure your dealer is EAGLE TRAINED. White's knows the EAGLE is not for everyone. Get a demonstration and see for yourself if the EAGLE is right for you!

"The first time out with my EAGLE, using a 4" loop, I located eleven gold nuggets. The smallest weighed less than a grain. White's unique method of cancelling the interference from ground mineralization and the EAGLE's ability to electronically analyze targets provides the best method yet for separating hot rocks and iron trash from even the smallest nuggets. EAGLE is by far the best gold hunter I have ever used."

"Jimmy Sierra"

Additional Features

- **Auto GEB with AutoTrac™.** Samples the ground and sets the detector for maximum depth and sensitivity. AutoTrac™ continually monitors ground conditions and electronically resets to maintain peak performance. A White's exclusive!
 - **Expanded G.E.B.** Expanded by 7 times that of past White's models. Provides improved performance on salt water beaches and other highly mineralized areas.
 - **Rechargeable Battery System**
 - **5 Sensitivity Settings**
 - **Built in Lamp for Night Use**
 - **Hipmount Kit Available**
 - **Adjustable Volume**
 - **Expanded Instruction Manual**
- \$769.95* *sugg. retail

Sweet Home, OR 97386

white's **EAGLE** T.M.

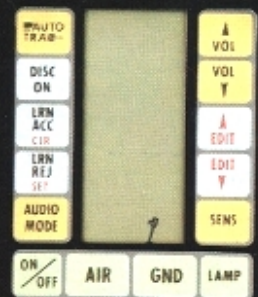

Seeing is Believing.

Digital Display shows it all!

Turn the EAGLE on and the display momentarily shows all display items: VDI Target I.D., Volume/Intensity bar graph, Depth Reading, VDI Reference number, discriminate memory indicator, audio mode, sensitivity level, Low Battery Alert, and prompts for AutoTrac, Discrimination. Plus, LEARN and EDIT functions. One glance shows you the total sophistication of EAGLE's computer technology.

Ground balancing the EAGLE is a snap with the push of two self-prompted buttons. In the event that EAGLE may need rebalanced during searching for any reason, the ground prompt will instantly reappear. EAGLE can cancel even the most extreme ground mineralization easily. Ground Balance range expanded by 7 times!

Unlimited Discriminate Options. Two Ways.

LEARN Method. Teach the EAGLE to accept or reject ANY TARGET by actual example. Pass the target by the loop 4 - 6 times and place the target in EAGLE's memory. Notch in or out any target or combination of targets for your specific hunting needs. The possibilities are endless.

EDIT Method. Scroll through the 00 - 95 VDI Range and custom edit to your specifications. Use the quick reference VDI scale conveniently located on top of the box for easy editing in the field. Set the detector to detect any combination of targets with the push of a button!

Use a combination of LEARN and EDIT methods, and search in any of the three discriminate modes for the most versatile, advanced discrimination system ever!

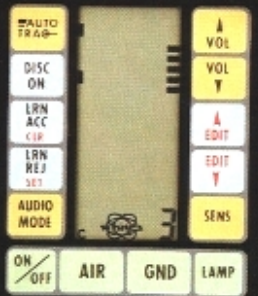

Unequaled Capabilities. Precise Pinpointing.

Squeeze the Trigger and the EAGLE reads out depth in half-inch increments, while the bar graph indicates signal intensity. Hold the Trigger, sweep the loop over the target. "Shrink" the target with the most accurate pinpointing tool yet: Electronic Ratchet Pinpointing.

Three distinct, full range audio discriminate modes. The accuracy only electronic Ratchet Pinpointing can deliver. EAGLE's complete programmability with your choice of Silent or Audio Search. Mode C is the first of its kind. Motion and nonmotion with tone I.D. Two modes in one!

EAGLE. A Complete Metal Detection System. From preprogrammed discrimination in PRESET, to custom discrimination, and the endless possibilities of tomorrow's microprocessor technology!

Converts easily to Hipmount!

VDI Reference Scale right on the box!
