MXT.™

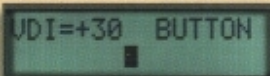

Redefining multipurpose hunting. You can do it all.

Can one metal detector find coins and jewelry at the park or on the beach? ID buttons, buckles and bullets? Go prospecting for gold? Yes!

MXT™ is as comfortable hunting for coins in the park as it is relic hunting an old battle site. Plus, it's designed by prospectors for the tough task of finding gold.

- 3 completely separate programs operating at 14 kHz - Coin & Jewelry, Relic, and Prospecting. Unique target responses, display information and audio frequencies.
- Optional search and discriminate methods like Discriminate Notch, Mixed Mode Audio, VCO Audio, and more.
- Auto. Ground Balance goes easily from mountain minerals to saltwater.
- 3 Easy-Adjust Controls - Gain, Threshold ... and
- All-new Dual Control - a full range discriminator in the coin and relic programs, S.A.T. speed adjustment in the Prospecting program.

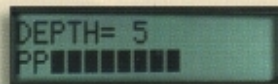

Coin & Jewelry Program displays VDI #, target blocks, and coin/jewelry/trash labels.

Relic Program I.D. buttons, buckles and bullets. Unique audio response similar to DFX's Mixed Mode Audio.

Prospecting Program features Goldmaster's patented display information.

Flip the trigger and zero in on your target's exact location. Read depth and watch the bars fill for accurate digging.

Detecting worked-out parks, schools, and old military campsites is fun again. The MXT™ has excellent depth and precise target identification. Works just as well on a saltwater beach.

White's MXT™ E-Series combines the "fast tracking" of ground minerals with White's patented VDI system of target identification and discrimination.

The MXT™ is simple to operate, with all the features you need to locate and identify coins, jewelry and relics, and the ground cancelling capability to automatically eliminate heavy ground mineralization and find those elusive gold nuggets.

Unique display information changes depending on your hunting mode - Coin & Jewelry, Relic, or Prospecting. After you've identified the target, flip the trigger to pinpoint and then read depth.

Three control knobs - GAIN, new DUAL control, and THRESHOLD. 2 Toggle switches - MODE and TRAC.

Waterproof Eclipse 950 search coil provides maximum depth. Interchangeable with all Eclipse accessory search coils.

Adjustable SL rod system. Perfect balance and control for all-day hunting comfort.

Dual control in Coin and Jewelry, and Relic programs. Functions as a full-range discriminator. In Prospecting program, adjusts S.A.T. speed from "0" to Hyper S.A.T.
