white's 5900/Di PRO SL

RELIC HUNTERS

Manual ground balance and 4 hunting modes give the 5900 the power and sensitivity you need for finding battlefield artifacts!

The proof of this detector is in the amount of treasure it has rewarded its owners with over the years.

It's a winning combination of features. A meter that works in conjunction with the audio to I.D. your target, and then tells you how deep to dig. Four hunting modes cover the whole range of hunting situations - prospecting for gold, hunting battlefield relics, or coins in the park. And with  settings on each control and instructions right on the box, it couldn't be easier.

\$499.95
sugg. ret.

•FEATURES•

 Preset settings on each control for simple operation and good performance in average conditions.

Meter ID's detected target and then reads out its depth when you flip the trigger. Trigger also alternates between hunting modes, and retunes so you're ready to hunt again once you've detected a target.

10-Turn High Resolution Ground Balance. Precise tuning you need for prospecting.

Four Hunting Modes for detecting all metals or discriminating - in all soils. GEB/NORM detects all metals while neutralizing the ground. GEB/DISC discriminates junk while neutralizing the ground. TR/DISC features non-motion

discrimination or extended ground rejection. GEB/SAT detects all metals while neutralizing the ground, plus operates smoother "SAT" Self Adjusting Threshold.

Signal Balance Control. Cleaner signals in all ground conditions.

S.A.T. (Self-Adjusting Threshold) keeps detector stable even when the ground minerals aren't

Drop-in C-cell battery pack included. (Rechargeable Nicad Pack available.)

"TALK TO THE PRO'S!"

white's 6000/Di PRO SL

If you want to hunt for it all - coins, jewelry, relics, gold nuggets - the PRO has that kind of flexibility.

This powerful favorite continues to satisfy its owners in every situation - parks, beaches, battlefields, goldfields. It's totally adjustable to suit virtually all your hunting needs, but with ∇ Preset settings on each control and instructions right on the box, it couldn't be easier.

\$599.95
sugg. ret.

•FEATURES•

AutoTrac® samples the ground minerals as you hunt and resets for maximum depth. Lock in a specific ground setting for special situations with Auto GEB.

Hot Rock Rejection switch. Eliminates false signals.

Four Hunting Modes.

∇ Preset settings on each control.

Meter ID's detected target and then reads out its depth when you flip the trigger. Trigger also alternates between modes, and retunes.

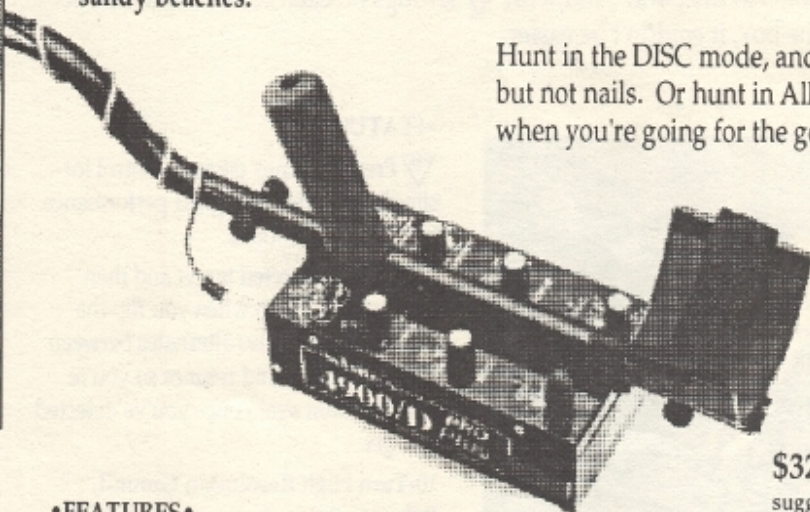

Signal Balance Control. Gives cleaner target signals for improved performance.

Drop-in C-cell battery pack. Rechargeable Nicad pack available.

white's 4900/DL

Whether you're after coins, relics or gold nuggets, the 49'er has the full range of adjustability you need from California's highly mineralized soil to Florida's sandy beaches.

Hunt in the DISC mode, and you dig coins but not nails. Or hunt in All Metal-a must when you're going for the gold.

\$329.95
sugg. ret.

•FEATURES•

Built for extreme soil conditions. Full depth plus the ability to cancel extreme ground mineralization in All Metal or DISC.

Sensitivity Control. Maximizes depth. Adjustable to allow you to run the 49'er as "Hot" as possible.

10-Turn Double Stacked Tuner. Precise tuning and control in extreme grounds.

Double stacked Tuner for fine tuning while ground balancing.

Null Bands on GEB & DISC controls.

∇ Preset settings on each control.

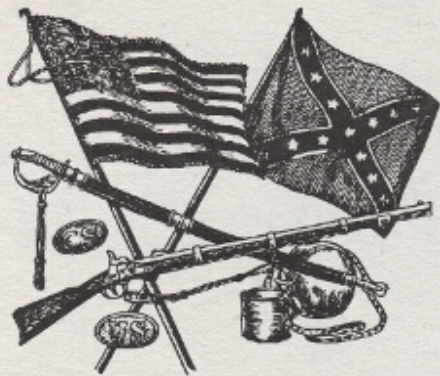

S.A.T. keeps the detector stable even when the ground minerals aren't.

Drop in C-cell battery pack. Rechargeable Nicad pack available.

"TALK TO THE PRO'S!"

white's® Blue & Gray Pro

A message from White's of the Mid-Atlantic ...

■ ■ We built this detector for the special needs of the relic hunter.

We needed a totally precise ground balance system, and a meter that showed just where our targets fell... ■ ■

Bob Buttafuso
Centreville, Virginia

The Blue & Gray Pro has been built to the exacting standards of our design team by the engineers at White's Electronics. This detector has the features that insure top performance for the special needs of today's relic hunter. Plus, it's a great value.

The Blue & Gray Pro has it all - power, depth, and sensitivity. And, it will handle the most mineralized grounds with ease.

But don't take our word for it. Take a minute to read what the pro's have to say about this exciting new detector. Then call for the name of your nearest Authorized Blue & Gray dealer.

Value ...

■ ■ Besides being an exceptional machine for the relic hunter, it is also an outstanding value. I recommend it as my choice for the 90's. ■ ■

Don Hinks
Gettysburg, Pennsylvania

Manual Ground Balance ...

■ ■ In recent years, we have discovered benefits of slightly offsetting the ground balance control. For example, a slightly positive setting will enhance responses to small targets, ie. buttons, bullets, and coins. Or, a negative offset might be used to eliminate "hot rocks" in areas that might otherwise be difficult to hunt. ■ ■

Keith Zorger
Harrisburg, Pennsylvania

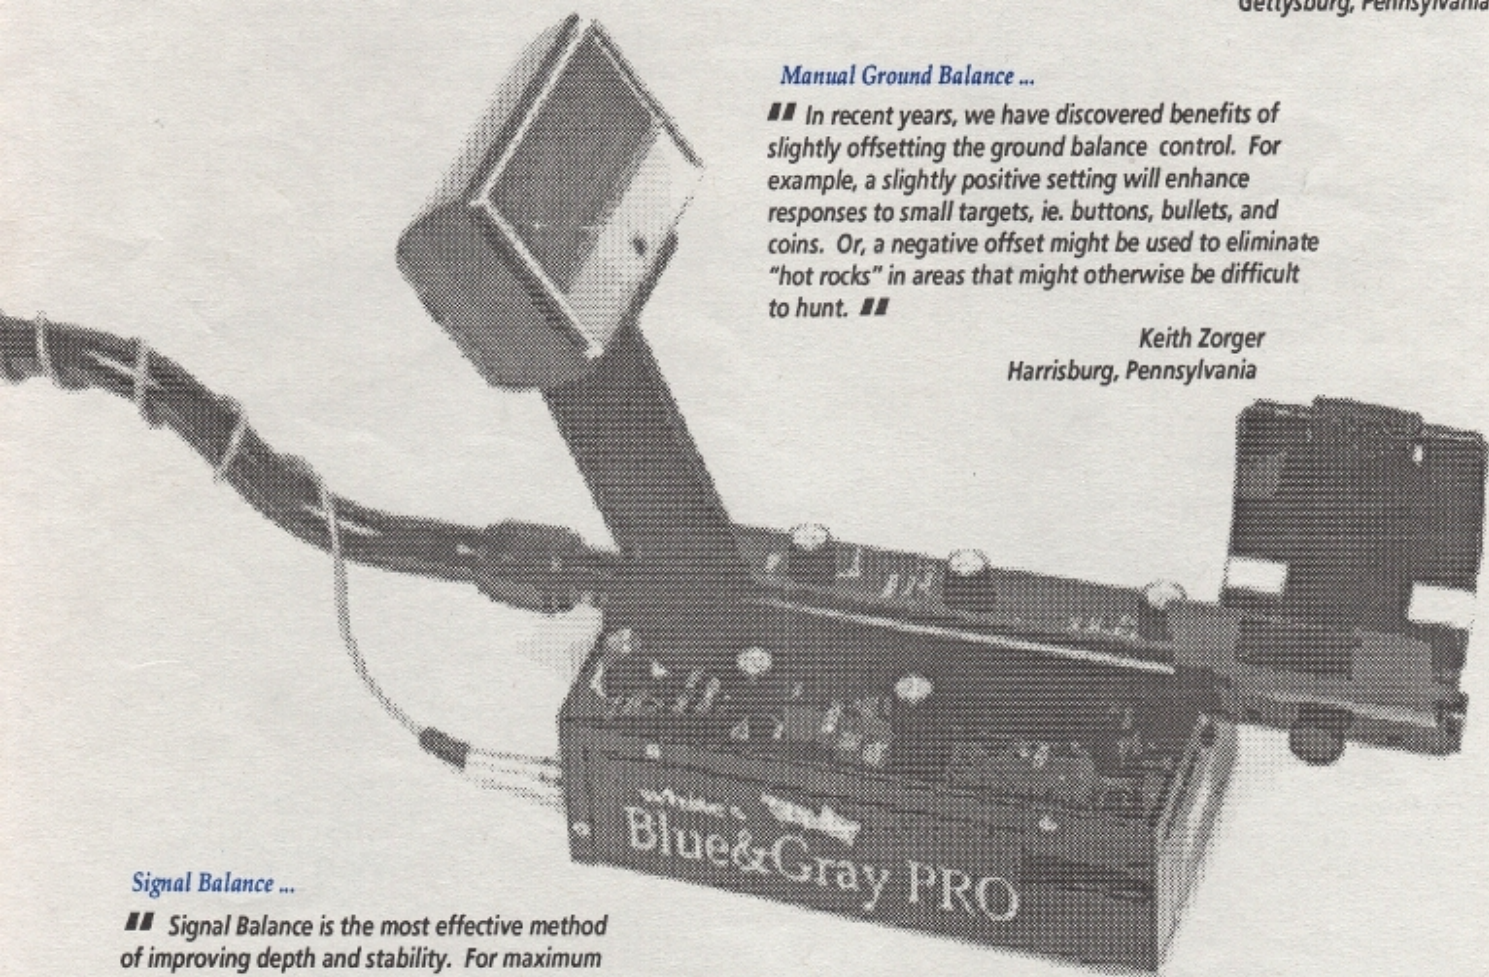

Signal Balance ...

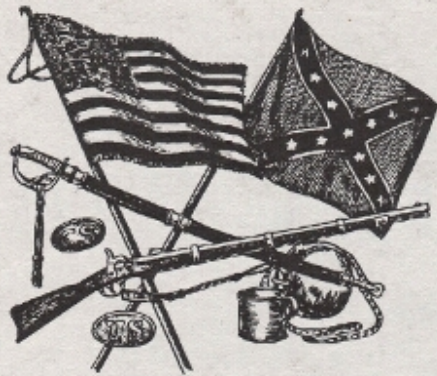

■ ■ Signal Balance is the most effective method of improving depth and stability. For maximum detection depth, I just turn the signal balance control to the highest setting which doesn't cause falsing. I know I am getting the most out of my detector. ■ ■

Bob Shuey
Averill Park, New York

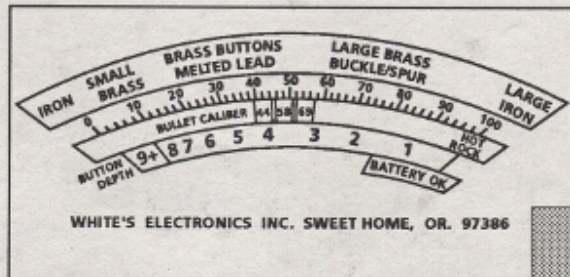

Rechargeable Nicad Battery System

Improved Nicads have virtually no memory. A single charge yields up to 15 hours of hunting. Included at no extra charge!

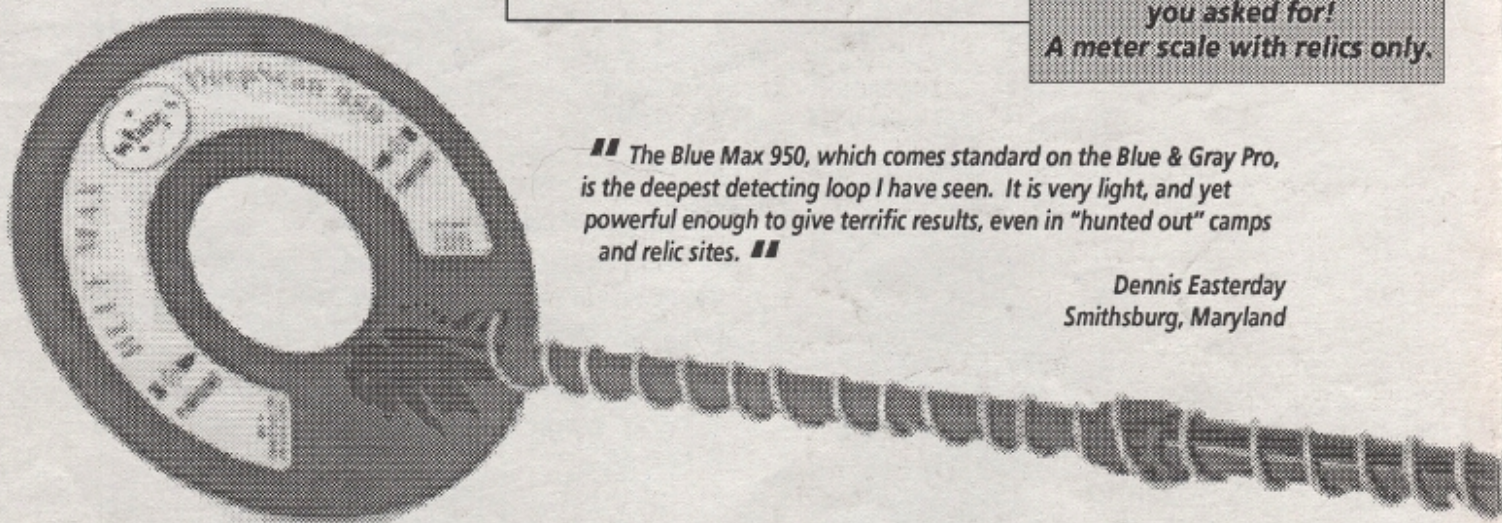

white's® Blue & Gray Pro

*The target information
you asked for!
A meter scale with relics only.*

■ ■ The Blue Max 950, which comes standard on the Blue & Gray Pro, is the deepest detecting loop I have seen. It is very light, and yet powerful enough to give terrific results, even in "hunted out" camps and relic sites. ■ ■

Dennis Easterday
Smithsburg, Maryland

FEATURES & SPECS

- Blue Max 950 9 1/2" search coil included. Accepts the popular Blue Max 600 and Blue Max 800 loops. Either loop may be used to hunt areas heavily laden with iron and other trash, ie. camps, hut sites, etc.
- 4 Hunting Modes
 - GEB/S.A.T. Is the relic hunters choice. Ignores the ground and detects all metals while it smooths out any changes in the ground. Great for hunting in extreme mineralization or trashy areas.
 - GEB/DISC discriminates out iron junk while ground balancing.
 - GEB/NORM detects all metals while ground balancing.
 - TR/DISC discriminates against junk while searching in low mineralized areas and saltwater.
- Hot Rock Rejection Switch eliminates false signals
- Signal Balance Control - Cleaner incoming target information for better all-around performance.
- Tuner Control
- 10-Turn Precision Ground Balance Control fine tunes for all kinds of ground. Maintain maximum depth and sensitivity for those deep targets - even in the worst grounds.
- Trigger Switch toggles between modes and retunes, and reads depth on the meter
- NORMAL  control settings
- Silent Search or Audible Threshold
- Large Meter; I.D.'s targets and reads depth
- 1/4" Headphone Jack
- Hipmount Conversion Kit available.
- Power Supply: Rechargeable Nicad Pack with charger

One of treasure hunting's heavyweights just got a little lighter.

"Workhorse." "Traditional Favorite."

"Fully Adjustable." "A Serious Detector."

This is how Pro users describe their detector of choice.

Now, they've added some new catchphrases ...

The latest "makes-good-sense" redesign on a detector that's been quietly and consistently finding treasure for more than 20 years.

"Light enough to hunt all day."

Serious hunters take note. 33% lighter to be exact. Balanced and comfortable.

"Extended battery life."

It's the tried-and-true 12 Volt slide-in battery system proven on our XLT, QXT, and Classic SL models. 16+ hours of high performance from 8 "AA" batteries. 1/4" stereo headphone jack. Optional rechargeable system.

"More compact."

All the power. All the analog adjustability. But streamlined for today's hunting. New surface mount technology reduces noise and increases efficiency. Yet the Pro XL is 50% smaller. The trade-off? Absolutely nothing. Still with 4 hunting modes, depth reading, adjustable discrimination, Signal Balance, Tuner. No sacrifices here. If you liked the depth and sensitivity of the Di Pro, you'll love the Pro XL.

6000 PRO XL

502 120

SHEET
1/1

Here's what Pro users are saying about the 6000 Pro XL ...

"All in all, I was very impressed with this detector. It is very easy to set up and use. It's very accurate. Can I say it different? If it says it's a coin and gives you a smooth tone, you can bet it's a coin. The 6000 Pro XL hits the nail on the head for all the people who love the 6000 but want the weight and balance of the XLT or QXT."

Will Holden

"The 6000 Pro XL has the ability to detect deep targets. It pinpoints well and is easy to handle. The unit should appeal to a beginner and will also attract seasoned treasure hunters who want lightweight and conventional setup."

William Hunt

"All the pretty lights and bells and whistles don't make good finds, but a unit that's a work horse will. Just my opinion, White's, but on a scale of 1 - 10, I have to give you a 12+. You took what was always one of the best units for all-around hunting and made it even better. I am very proud of this detector, and look forward to many hours in the field and many finds."

Alan Cornelison

Features & Specifications

Powerful and versatile for all kinds of hunting including coin hunting, relic & beach hunting, plus searching for gold nuggets.

AutoTrac® electronically samples the ground and resets automatically for maximum depth and sensitivity.

Waterproof, 9 1/2" DeepScan loop provides maximum depth of detection on coins and coin sized targets.

Depth Reading shows you how deep to dig. Deeper targets are more likely valuable.

Target I.D. meter indicates the probable identity of your detected target.

4 hunting modes for virtually any hunting situation:

GEB/DISC cancels the ground and discriminates out junk.

GEB/NORM cancels the ground and detects all metals.

TR/DISC provides superior trash rejection in low mineralized areas.

GEB/SAT cancels the ground, detects all metals and maintains threshold automatically. Especially useful in areas where the ground conditions change dramatically.

Large, easy to read meter shows target I.D., depth reading and battery strength.

Trigger Switch conveniently alternates between hunting modes, and switches between depth reading and target I.D.

PRESET settings on each control for easy operation in most situations.

Discriminate control adjusts the level of trash you ignore.

Tuner control sets the optimum threshold.

Signal Balance control adjusts for improved performance and cleaner target signals in all types of grounds.

Power Supply: Slide-in 8 "AA" battery system. Optional rechargeable Nicad system.

Weight with batteries: 4 lbs., 3 oz.

1/4" stereo headphone jack.

Optional interchangeable waterproof loops from 4" - 15"

Made in America.

Mfrs. suggested retail (U.S. funds) \$699.95.
